WPS Tools Manual

The plain-words guide to the Dashboard, Job Log, report sending, Photo Tool and Dictation

Written for someone who has never opened these tools. Part 1 gets you going in ten minutes. Part 2 answers "How do I...?" one job at a time. Part 3 is the full detail, for when you need it.

What's inside

Part 1. Quick start

1. Start here
2. Your day in five steps
3. Words you'll see

Part 2. How do I...?

4. Sixteen everyday jobs, step by step

Part 3. The full detail

5. The Dashboard
6. Missed visits: Mark visited and Rearrange
7. Job stages and Undo
8. The Job Log: List, Board, Calendar
9. Adding and editing a job
10. The To review tray
11. Sending reports automatically
12. The check-in signing page
13. Comment windows and amendments
14. The Photo Tool
15. Dictation
16. Mid-terms and the tenant slot link
17. Plan my day, Route and Map
18. Using it on your phone
19. The sidebar menu
20. What runs by itself, what you do
21. If something goes wrong
22. Known gaps
23. New on 20 October

Version of 20 October 2026 (replaces the 19 October version). Section 23 lists the 20 October additions (keys, day-before reminders, price list, money by month, property history, next mid-term due, mileage, CSV export, undo delete, change history). Otherwise it matches the tools after the 19 October changes: Do next and Park, the Board view, the Map, Plan my day with Google road times, mid-terms and the tenant slot link, and the news line. Screenshots use made-up jobs, addresses and names (Example Lettings, Sample Estates, example.com emails), so no real tenant details appear. The screenshot clock is set to Tuesday 13 October, so dates in the pictures won't match today. The lettering is slightly different from your screen; the buttons and layout are the same. The news headlines in the pictures are made-up examples.

1. Start here

PART 1. QUICK START

The tools, in one line each

Tool	What it does for you
Dashboard	Your home page. Tells you what to do next, today's jobs, the week ahead, and the money.
Job Log	Every job you've ever logged. Add, change and move jobs along.
Report sending	You save a finished report as a PDF into one Drive folder. It emails itself to the right people.
Photo Tool	Turns a day's photos into named, watermarked zips, one per job. Use it on the PC.
Dictation	Talk your notes into the phone, room by room. Use it on the phone.

How to open them

1. Open Chrome (Safari on the iPhone) and go to **https://8kj2j8jv85-maker.github.io/wps-job-log/**. Bookmark it. It always opens on the Dashboard.
2. When Google asks you to sign in, **always pick info@wellingtonparker.com**. Everything (the Job Log Sheet, calendar, inbox, Drive) lives there.
3. The other tools are in the sidebar on the left (on the phone, along the top): `Dashboard` `Job Log` `Photo Tool` `Dictation`.

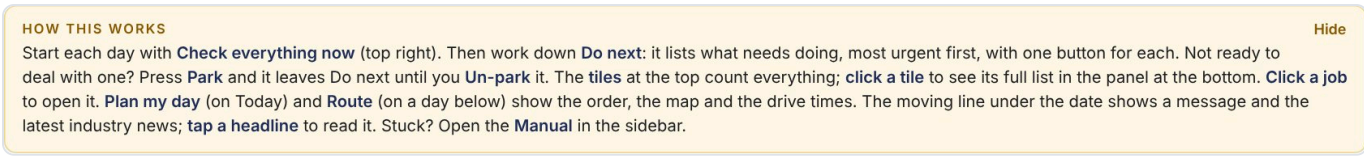

Where your jobs are kept

Each device keeps its own copy so it works fast, even without a signal. The master copy is the Google Sheet "WPS Job Log" on info@. On the PC, changes save to Google by themselves within seconds once you're signed in. The sidebar says `Saved to Google ✓ 08:45` when all is well. On the phone, tap `Save & get latest` each time you open it and after you change something.

> **Never type in the Google Sheet.** Change jobs only in the Job Log. Anything typed into the Sheet is ignored and gets written over.

Getting help on the screen

- **Hover** the mouse over anything on the PC for a second: a short explanation pops up.
- **Help hints** in the sidebar (under TOOLS) switches on a yellow "How this works" box on each screen, plus a line of text under the main buttons. Good on the phone, where you can't hover. `Hide` on a box puts that one away; switch Help hints off and on to bring it back.
- **Manual** in the sidebar opens this manual.

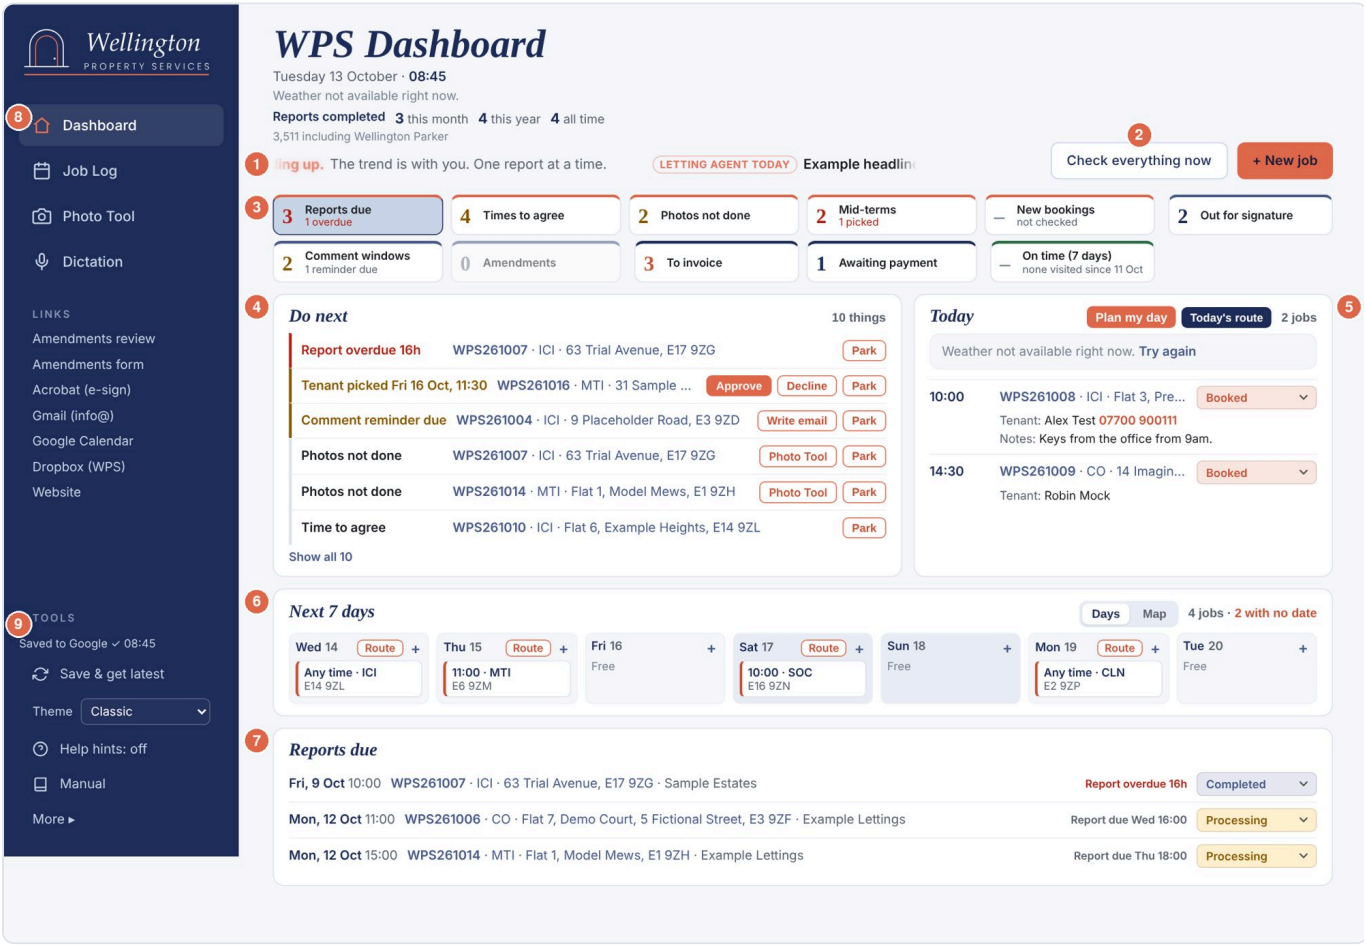

The Dashboard's "How this works" box (Help hints on).

After Claude changes the tools, press `Ctrl+Shift+R` on the PC to load the new version. An open tab keeps the old one, and it can take up to 10 minutes for the new copy to reach you.

2. Your day in five steps

That's really all there is to it. Part 2 shows each step in detail.

The Dashboard. The numbers are explained in section 5.

1. **Open the Dashboard and click** `Check everything now` (top right). It saves, gets the latest from Google, looks for new bookings, picks up reports that sent themselves, and loads tenant comments. If a **To review** tray appears, go through the cards (4.5).
2. **Work down "Do next".** It lists what needs doing, most urgent first, each with one button. Do the top one, then the next. Not ready for one? Press `Park` (4.2).
3. **Go to your visits.** `Plan my day` shows the order, the miles and when to leave (4.3). Dictate on the phone as you go (4.10). After each visit, move the job to **Processing** (4.7).
4. **Finish reports and send them.** Photos through the Photo Tool (4.9), then save the finished PDF into **WPS Ready to send**. It emails itself and the job moves to Sent (4.11).
5. **Money.** Invoice in Tide with the WPS number in the message line; click `Mark invoiced` on the card that appears, and `Paid` when the money comes in (4.13).

Once a week: Export backup (4.16), and look at the On time tile to see how the week went.

3. Words you'll see

Job types

ICI	Inventory and check-in. The tenant signs it and has 7 days to comment.
CO	Check-out. Report due 48 hours after the visit.
MTI	Mid-term inspection. Always copied to bowpropman@winkworth.co.uk.
SOC	Schedule of condition.
CLN	Clean check.

Stages (the coloured box on every job)

Booked	In the diary, not visited yet.
Processing	Visited, report being written. The report clock is running.
Completed	Report written, not sent.
Sent	Report has gone out. Set by itself when the report emails itself.
Signed	Check-in signed by everyone. You set this when the signed copy arrives.
Deemed agreed	Check-in: 7 days passed, no signature, no comments open. Set by itself.
Archived	All done and filed.

Other words

Do next	The Dashboard's to-do list, most urgent first.
Park	Take a job off Do next for now. **Un-park** puts it back. It still shows everywhere else.
Tile	The small counters across the top of the Dashboard. Click one to see its list.
To review tray	Bookings, changes, cancellations and Tide invoices Claude found in the inbox, waiting for your click.
Times to agree	Booked jobs with no time (or no date) yet.
Comment window	The 7 days a tenant has to comment on a check-in.
Amendments	Tenant comments sent through the comments form.
Slot link	A mid-term tenant's own web link where they pick a free time.
WPS Ready to send	The Google Drive folder you save finished reports into (G:\My Drive\WPS Ready to send on the HP).
Held	A report the sender wouldn't send because something was missing. info@ gets an email saying why.

Undo bar	The bar at the bottom for 8 seconds after a change, with an Undo button.
Save & get latest	Saves to Google and brings in changes from your other devices.

4. How do I...?

PART 2. SIXTEEN EVERYDAY JOBS, STEP BY STEP

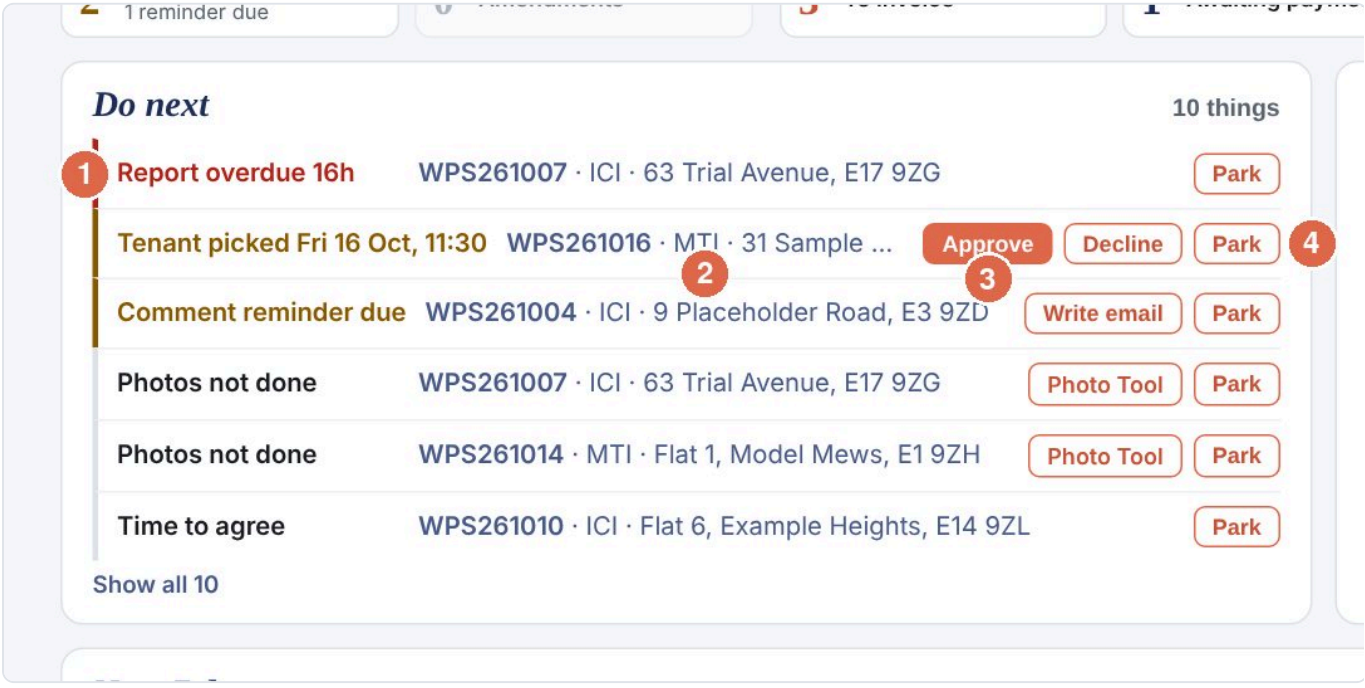

Each job is a few numbered steps. The coral numbers on the pictures match the steps. For more detail, the section in Part 3 is named at the end.

4.1 ...start my day?

1. Open the Dashboard (bookmark). Sign in as info@ if Google asks.
2. Click **Check everything now** (top right). Wait until it stops saying "Checking...".
3. If the **To review** tray opens, go through each card (4.5).
4. Look at **Do next** and the **Today** box. Today shows each visit's time, tenant, phone and notes (keys, access).

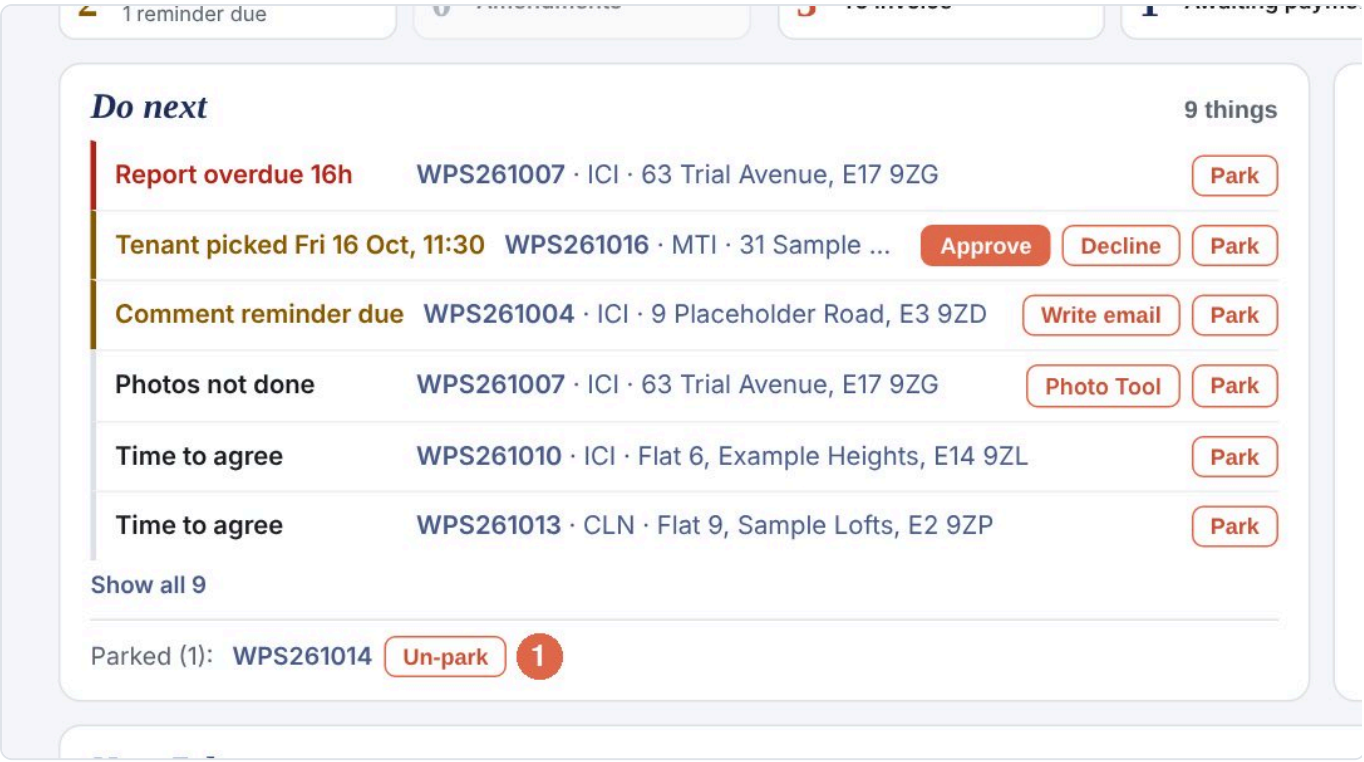

More: section 5.

4.2 ...work through Do next, and Park?

1 What needs doing. 2 The job (click to open it). 3 The one button that does it. 4 Park.

1. Read the top line 1 . Red = late, amber = soon, plain = when you can.
2. Press its button 3 , for example **Approve** , **Mark visited** , **Write email** , **Photo Tool** or **See who owes** . Or click the job 2 to open it.
3. When it's done, the line disappears by itself. The next one moves up.
4. Can't do it yet (waiting on the agent, say)? Press **Park** 4 . It drops off Do next but still shows in the tiles and lists.

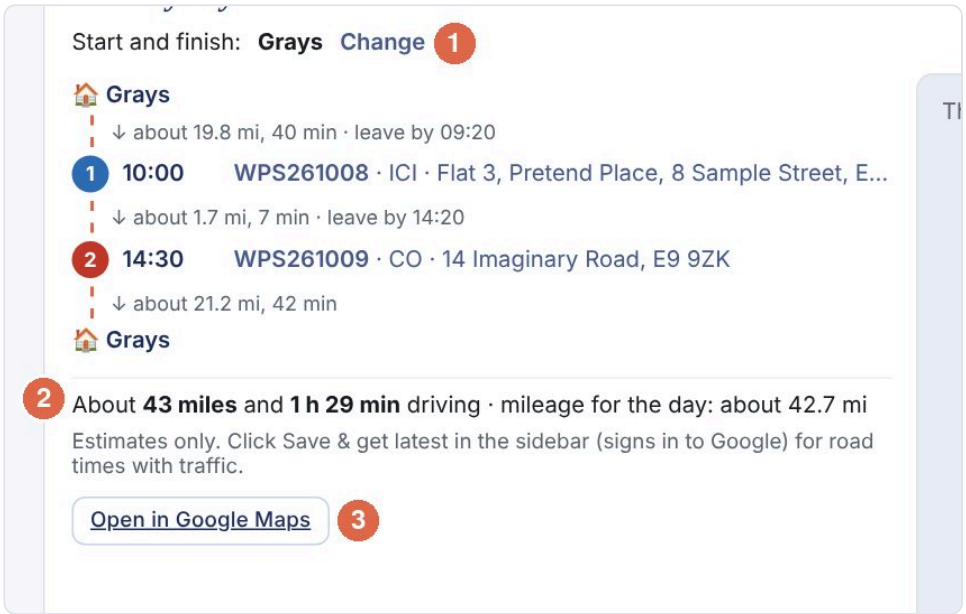

Parked jobs are listed at the bottom of Do next. 1 Un-park puts one back.

Do next shows 6 lines; **Show all** shows the rest. "Nothing urgent. All caught up." means exactly that.

More: section 5.

4.3 ...plan my driving for the day?

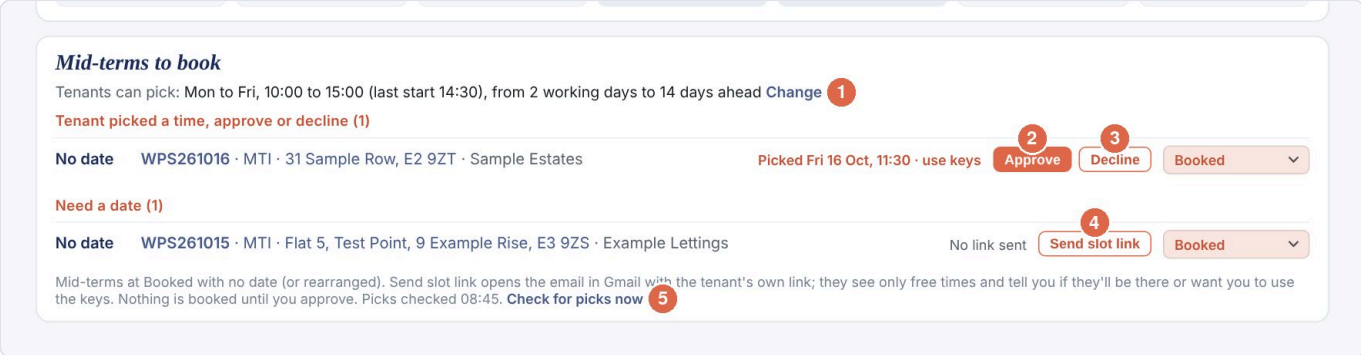

Plan my day (the list part). 1 Change where you start. 2 Total miles and driving. 3 Open in Google Maps.

1. On the Dashboard, click **Plan my day** in the Today box. For another day, click **Route** on that day in Next 7 days, or pick the day from the box at the top of the plan.
2. Read it top to bottom: home, each leg with miles, drive time and "leave by", each job, back home. A red line means you may be late.

3. Want real road times with traffic? Click **Save & get latest** in the sidebar first (that signs you in to Google). Without it the times say "about".
4. Click **Open in Google Maps** for turn-by-turn directions. **Close** puts the plan away.

More: section 17.

4.4 ...book a mid-term with the tenant's slot link?

Mid-terms to book. 1 Which days and hours tenants can pick. 2 Approve. 3 Decline. 4 Send slot link. 5 Check for picks now.

1. Click the **Mid-terms** tile. You'll see mid-terms at Booked with no date. (If it asks you to, click Save & get latest in the sidebar first.)
2. On a job, press **Send slot link** 4 . Gmail opens with the email to the tenant, CC bowpropman@winkworth.co.uk, with their own link. Check it and press Send in Gmail. Nothing goes until you do.
3. The tenant opens the link, sees only free times, picks one and says if they'll be there or you can use the keys. You get an email at info@.
4. Their pick shows in Do next and here. Press **Approve** 2 : the job gets the date and time, goes in the calendar, and the confirmation email opens in Gmail for you to send. Or **Decline** 3 : they pick again from the same link (that email opens too).

Nothing is booked until you press Approve. No reply? **Send again** sends a chaser with the same link. **Copy link** copies it for a WhatsApp.

More: section 16.

4.5 ...add a booking that came by email?

1. Click **Check everything now** . Claude also checks the inbox by itself at 7:51, 12:51 and 15:51, Monday to Saturday.
2. In the **To review** tray, read the card. **Open email** shows the original.
3. New booking: **Add to log** (or **Edit & add** to check it first). Change: **Apply change** . Cancellation: **Delete cancelled job** . Tide invoice: **Mark invoiced** . Not needed: **Dismiss** .

WhatsApp bookings can't be seen: add those by hand (4.6).

More: section 10.

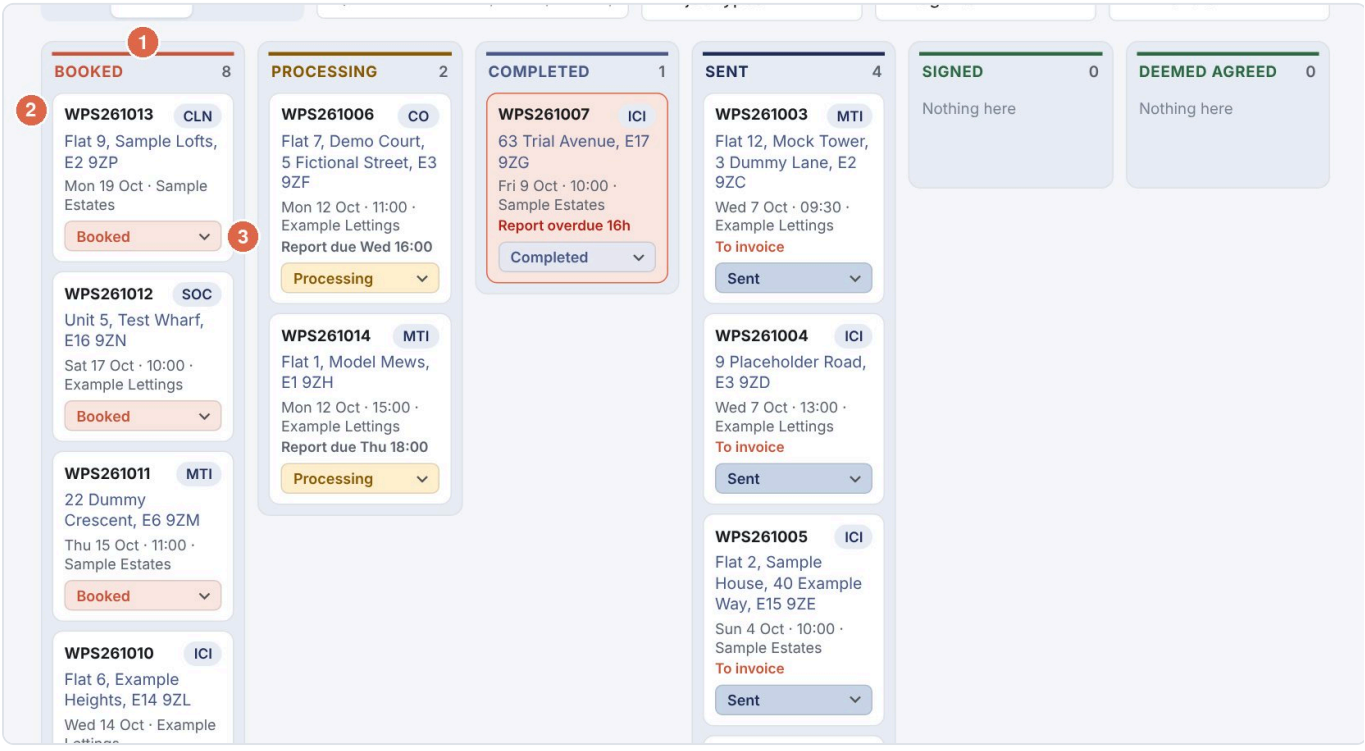

4.6 ...add or change a job by hand?

1. Click **+ New job** (top right, or the round coral + on the phone), or the + on a day.
2. Paste the agent's email into the box at the top and click **Extract job details**, or type the details. Check what it filled in.
3. Pick the agent, add each tenant on their own row (name, phone, email), tick who gets the report under Copy to.
4. Click **Save job** at the bottom. To change a job later, click it anywhere and **Save changes**.

More: section 9.

4.7 ...move a job to the next stage?

1. Click the coloured stage box on the job (Dashboard, Job Log, or in the job) and pick the new stage.
2. Or, in the Job Log, click **Board** and drag the card into the next column (PC). On the phone, pick from the box on the card.
3. Wrong one? Click **Undo** on the bar at the bottom (8 seconds).

The Board. 1 One column per stage. 2 A job card (drag it). 3 Or pick the stage here.

More: sections 7 and 8.

4.8 ...deal with a visit that didn't happen?

1. Do next says "Visit passed, still Booked". If you did go, press **Mark visited**.
2. If you didn't, press **Rearrange**. Put the new date and time if you know it, or leave them blank.

3. Leave "Open an email to the tenant" ticked and press `Save`. Gmail opens with the email. Check it and send.

More: section 6.

4.9 ...do the photos?

1. On the PC, open the **Photo Tool** from the sidebar.
2. Drag the day's photos onto the dashed box. They're split into one set per visit and matched to the job.
3. Check each set's job. Click the first photo of each room and pick the room.
4. Click `Process & download zip`. The zip goes to Downloads and the photo link is saved to the job. Upload the zip to the photos server as usual.

More: section 14.

4.10 ...dictate on the phone?

1. Open **Dictation** (top bar on the phone). Type the job number; the address fills in.
2. Tap a room, tap the microphone, talk. Tap again to stop. Next room.
3. At the end, tap `Copy for Claude` and paste it into the WPS project chat.

More: section 15.

4.11 ...send a finished report?

1. Check the job: right client, type, address, postcode, photo link. For a check-in, every tenant row has an email.
2. Save the PDF into **WPS Ready to send** with the job number in the name, e.g. **WPS000000.E39ZZ.12.10.26.MTI.pdf**.
3. That's it. Within about 15 minutes it's emailed. Check-ins go to each tenant with their own signing link. The job shows Sent after your next Check everything now.
4. If something was missing, info@ gets **"Report held, not sent"** with the reason. Fix it and move the PDF from Held back into WPS Ready to send.

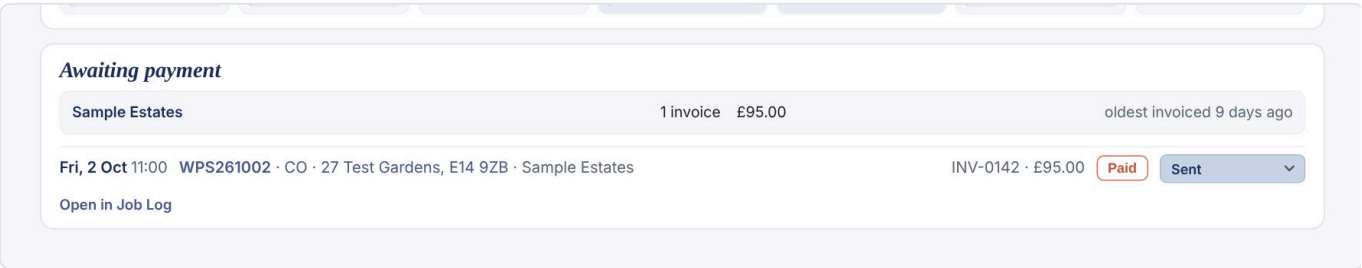

More: sections 11 and 12.

4.12 ...handle tenant comments on a check-in?

1. The **Amendments** tile (and Do next) shows jobs with comments open.
2. Say **"review amendments WPS..."** to Claude in the WPS project chat. Then decide each point on the review page.
3. Re-send the corrected report and click `Re-issued today` in the job. The 7 days start again.

More: section 13.

4.13 ...invoice and get paid?

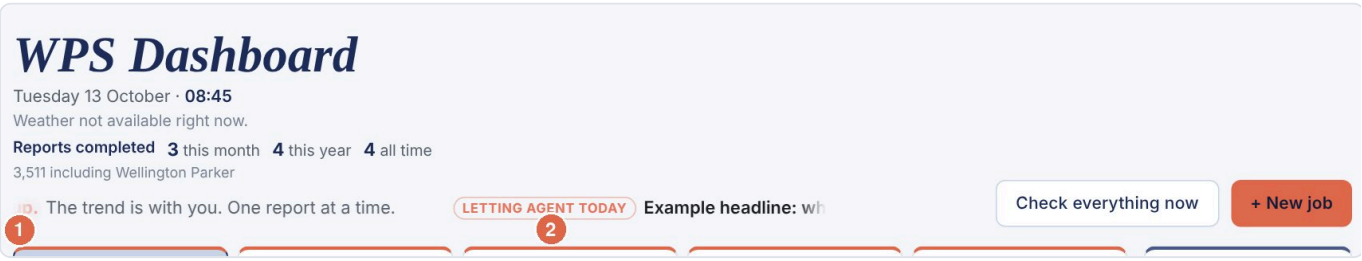

Awaiting payment: who owes, how much, how long.

1. The **To invoice** tile lists reports sent but not invoiced.
2. Raise the invoice in Tide. Put the **WPS job number in the message line**.
3. An **Invoice sent** card appears in the To review tray. Click `Mark invoiced`.
4. When the money arrives, open **Awaiting payment** and click `Paid` on that job. The top of the panel shows each client's total and the oldest invoice; older than 30 days turns red.

More: section 5.

4.14 ...read the news line?

1 Today's message. 2 A headline, with the website's name in the coral box (made-up example).

The moving line under the date takes turns: an encouraging message, then a headline from the inventory and lettings news (AIIC, Propertymark, Letting Agent Today, Landlord Today, Property118, Landlord Law Blog, The Negotiator). **Click or tap a headline** to read it in a new tab. Rest the mouse on the line to pause it. New headlines are fetched every hour. If a news site stops working for more than a day, a small line under it says which.

4.15 ...use it on my phone?

1. First time only: open the address, tap `Load my jobs from Google`, sign in as info@.
2. Every time: tap `Save & get latest` (or `Check everything now`).
3. Swipe the tiles sideways to see them all. `Menu ☰` opens the links and tools. The round coral **+** adds a job.

More: section 18.

4.16 ...back up my jobs?

1. In the sidebar, under TOOLS, click **More ▸**.
2. Click **Export backup**. A file goes into Downloads. Do it once a week.

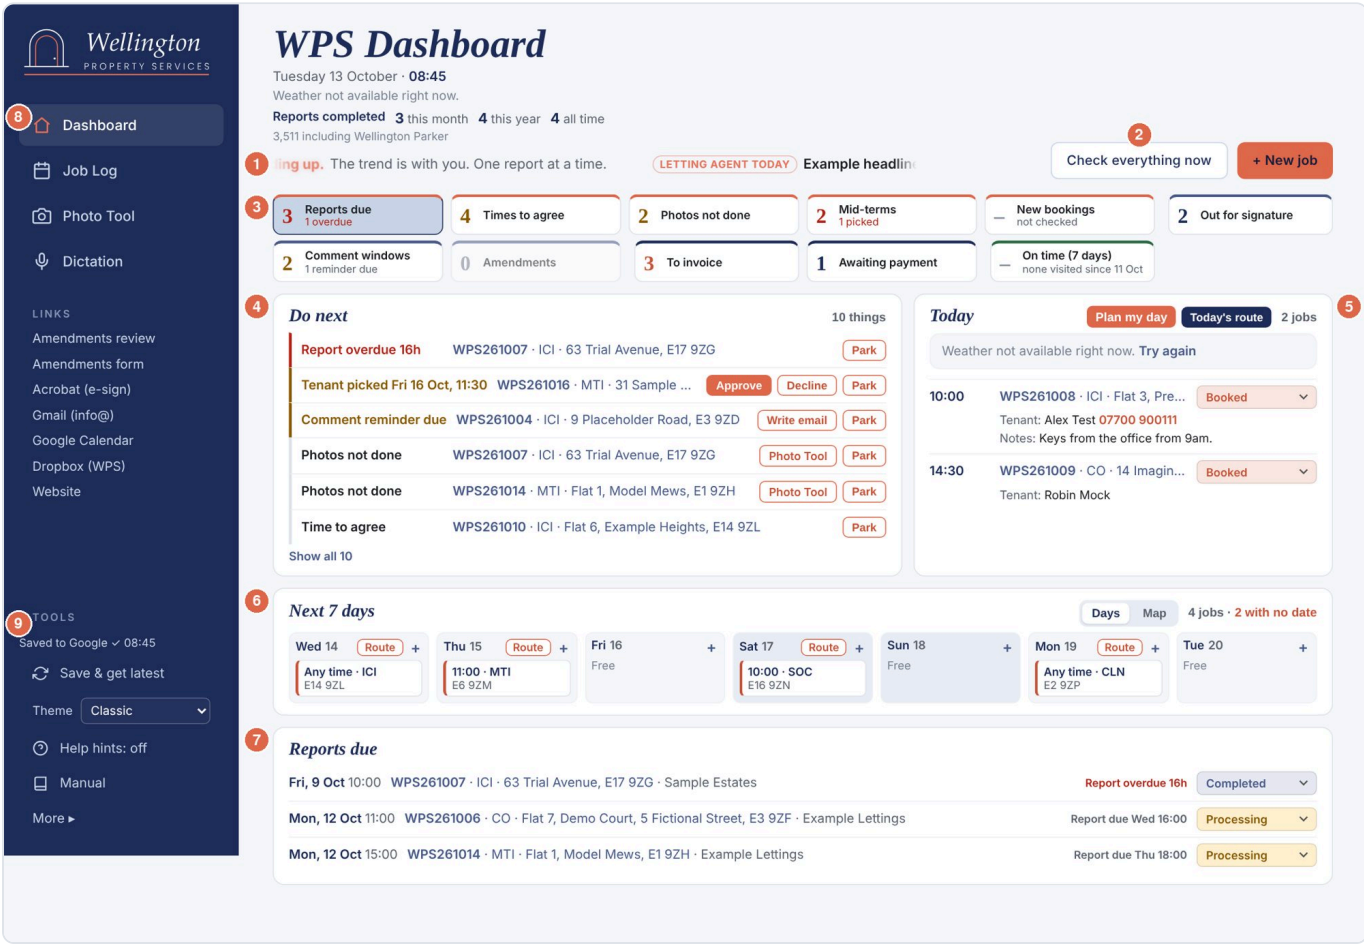

Don't use **Import backup** unless Claude tells you to: it replaces the jobs on that device.

More: section 19.

5. The Dashboard

PART 3. THE FULL DETAIL

The Dashboard is the first page you see. It fits on one screen of the PC.

The Dashboard. The numbers match the list below.

1. **The news line.** Takes turns: an encouraging message, then an industry headline. Click a headline to read it (4.14).

2. **Check everything now.** Saves and gets the latest from the Google Sheet, checks new bookings, picks up reports that emailed themselves and loads amendments, in one click. It says **Checking...** while it works. A small coral number shows how many cards are waiting to review. **+ New job** next to it logs a job by hand (section 9).

3. **Tiles**, in four groups: To do now, Waiting on others, Money, Performance. Each shows its number beside its name. Click a tile to show its list in box 7. A tile with nothing in it is faded.

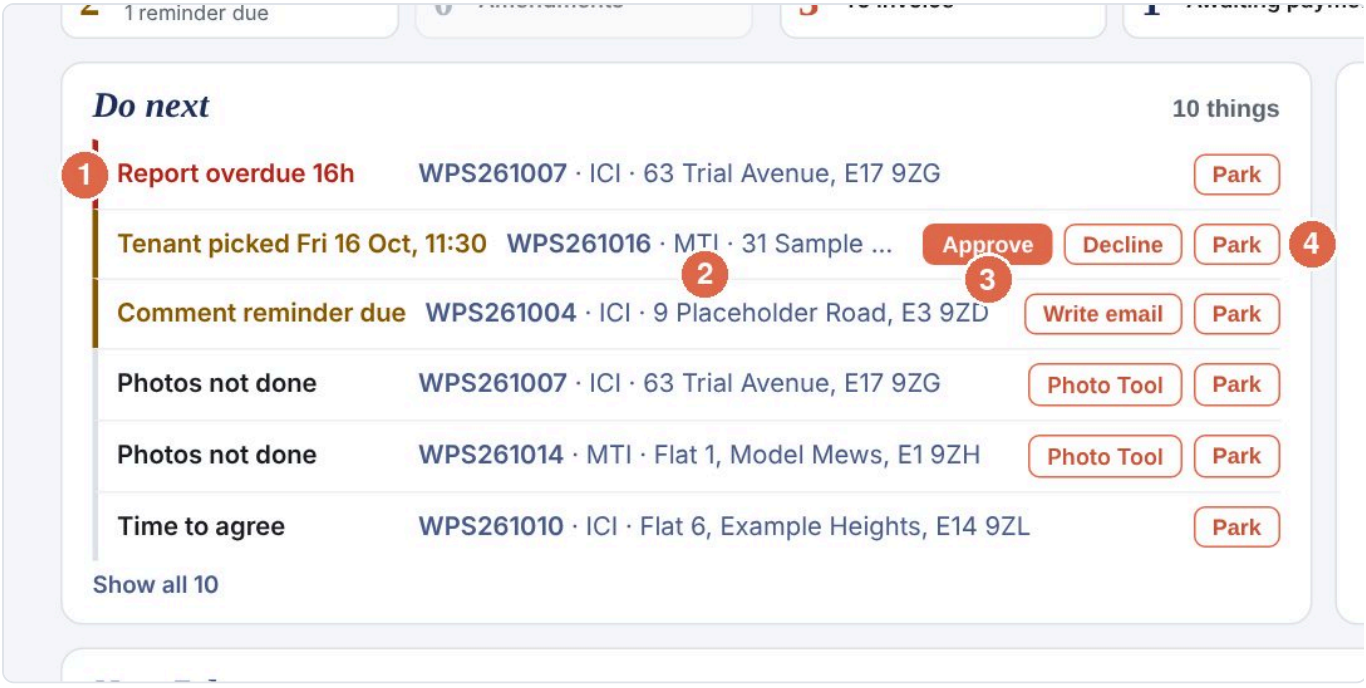

4. **Do next.** What to do now, most urgent first, one button each (below).

5. **Today.** Today's jobs in time order, with the tenant, phone and notes under each, the weather, **Plan my day** (section 17) and **Today's route** (Google Maps with today's jobs in time order).

6. **Next 7 days** or **Map.** The coming week, a day per column, with **Route** on each day that has jobs and + to add a job on that day. Days with nothing booked show "Free". **Map** shows the jobs as pins instead (section 17). "2 with no date" opens the jobs still waiting for a date.

7	**The list panel.** Shows the list for whichever tile is selected. It shows up to 7 lines, then Show all. When you open the Dashboard it picks the most urgent tile that has something in it.
8	**Pages:** Dashboard, Job Log, Photo Tool, Dictation. Under them, **LINKS** (section 19).
9	**TOOLS:** saving to Google, Theme, Help hints, Manual, and More ▸ for backups and the calendar (section 19).

Do next and Park

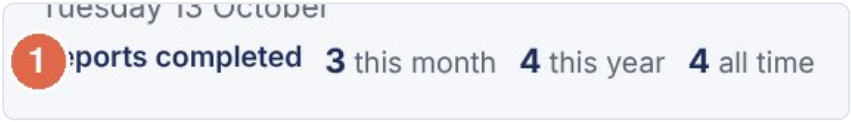

1 What needs doing. 2 The job. 3 Its button. 4 Park.

Do next puts everything that needs you in one list, in this order: tenant comments to review; reports overdue; a tenant has picked a mid-term time (**Approve** / **Decline**); visits passed but still at Booked (**Mark visited** / **Rearrange**); comment reminders due (**Write email**); bookings from Gmail to check (**Open tray**); reports due within a day; photos not done (**Photo Tool**); times or dates to agree (mid-terms get **Send slot link**); reports sent but not invoiced (**See list**); invoices awaiting payment (**See who owes** , red once the oldest is over 30 days). It shows 6 lines, then **Show all** .

Park takes a job off Do next until you un-park it. It still counts in the tiles and shows in every list. Parked jobs are listed at the bottom of Do next with an **Un-park** button each.

Everywhere on the Dashboard: click a job (the blue job number and address) to open it. Use a job's coloured stage box to change its stage (section 7). The page refreshes itself every 3 minutes, and when you come back to the tab, but never while a job form or Rearrange panel is open or you're typing.

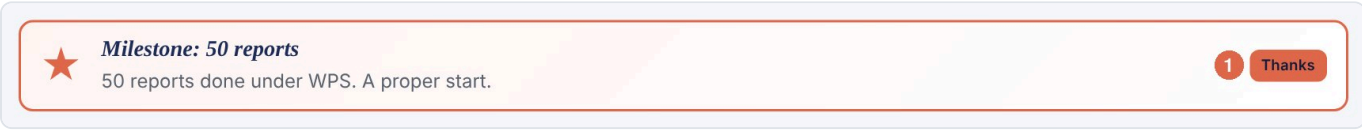

Reports completed

1 The counter under the date, on the Dashboard and the Job Log.

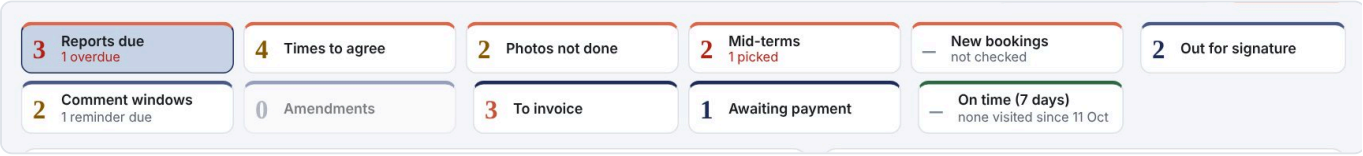

Under the date, **Reports completed** counts your finished reports this month, this year and all time. An inventory and check-in counts once it's Signed, Deemed agreed or Archived; every other report counts once it's Sent (or later). It only counts jobs in the Job Log, so it's WPS work only.

Milestones. When the all-time count passes 50, 100, 250, 500, 1,000, 2,000 or 3,000, a card appears under the panel. Click Thanks to put it away. Each device shows each milestone once.

A milestone card. 1 Thanks puts it away.

The tiles

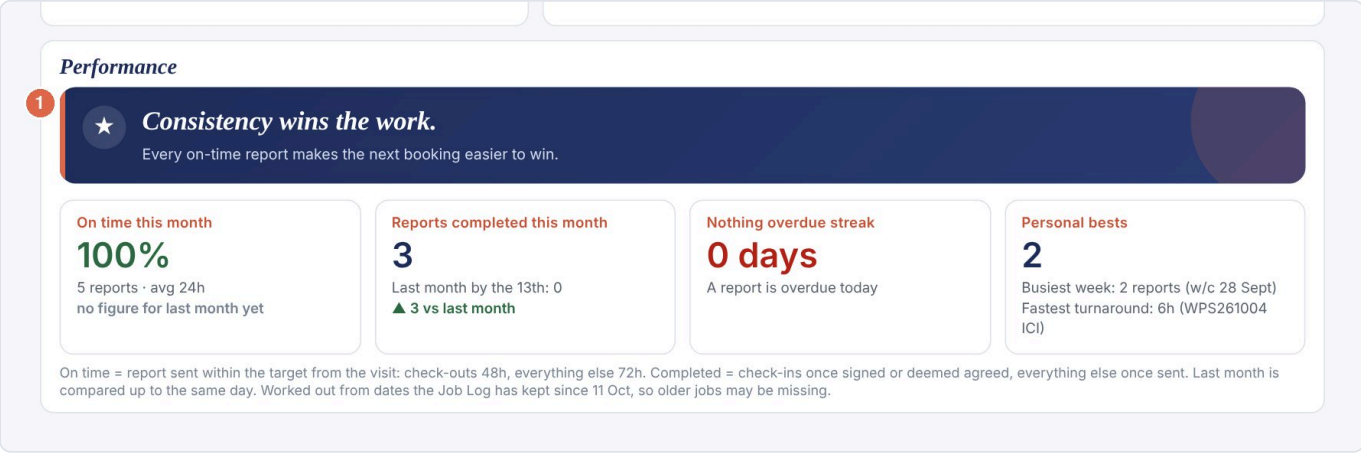

The tiles: number first, then the name. On the phone they sit in one row you swipe sideways.

Tile	What it counts	What to do
To do now		
Reports due	Jobs you've visited whose report hasn't been sent, soonest first. The line underneath shows how many are overdue and how many are "to confirm" (still at Booked after the visit time).	Confirm visits or rearrange them (section 6); write the reports and move them on.
Times to agree	Booked jobs with no time set (today or later, or no date). Winkworth check-outs with a date are left out: they are done any time that day. Rearranged jobs waiting on a new date show a **Rearranged** tag.	Agree a time, open the job, add it.
Photos not done	Jobs visited in the last 30 days, report not sent, no photo link saved.	Run the Photo Tool for them, or paste a link into the job.
Mid-terms	Mid-terms at Booked with no date (or rearranged). The line underneath shows how many tenants have picked a time.	Send slot links; approve or decline picks (section 16).
New bookings	Cards from the inbox check you haven't dealt with (bookings and Tide invoices). Shows "–" with "not checked" until you click Check everything now.	Check everything now, then work through the tray (section 10).
Waiting on others		
Out for signature	Inventory and check-in reports at Sent, waiting for signatures.	Set to Signed when the signed copy arrives.
Comment windows	The 7-day comment window on each sent check-in report. The line underneath shows reminders due.	Section 11.

Amendments	Jobs with tenant comments still open. Shows "–" with "click to load" until loaded.	Click the tile, then Load amendments (or use Check everything now).
Money		
To invoice	Report sent (or signed, deemed agreed, archived), not invoiced yet.	Invoice in Tide with the WPS number in the message line.
Awaiting payment	Invoiced, not paid yet. Shows the invoice number and a **Paid** button.	Click Paid when the money arrives.
Performance		
On time (7 days)	The share of reports sent within target over the last week, and the average hours from visit to sent. Targets: check-outs 48h, everything else 72h. Green 80% and over, amber 50–79%, red below.	Click for the Performance panel.

Number colours: red = late or needs action now, amber = worth doing soon, coral = money to chase, navy = information, grey = nothing there.

The Performance panel

The Performance panel. 1 The message changes with how things are going.

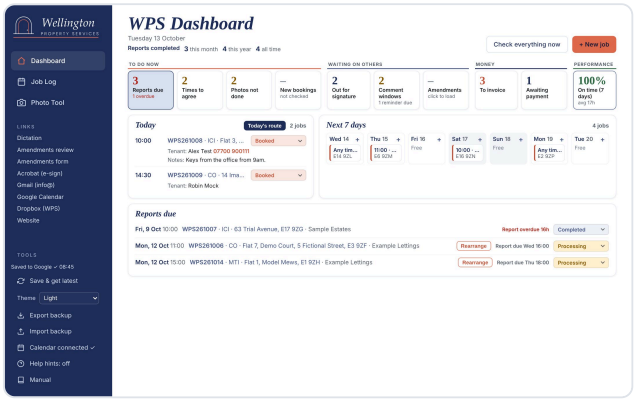

Click the **On time** tile. At the top, a message card: it picks its words from how the month is going (a personal best, up on last month, a quiet spell, or steady). Underneath, four cards:

- **On time this month:** the share of reports sent within target, how many, the average hours, and last month's figure once there is one.
- **Reports completed this month:** compared with last month up to the same day, with ▲ (up) or ▼ (down).
- **Nothing overdue streak:** how many days in a row with no report overdue. It drops to 0 when one is overdue today.
- **Personal bests:** your busiest week and your fastest turnaround.

The figures are worked out from the dates the Job Log has kept since 11 October, so older jobs may be missing from them.

Themes

The **Theme** box in the sidebar changes the colours on that device: **Classic** (the usual look), **Light** (white background) or **Night** (dark, easier on the eyes in the evening). It's one setting for every page: the Dashboard, Job Log, Photo Tool (Theme box at the bottom of its sidebar) and Dictation (Theme box in its Settings) all follow it, and you can change it from any of them. Each device remembers its own choice.

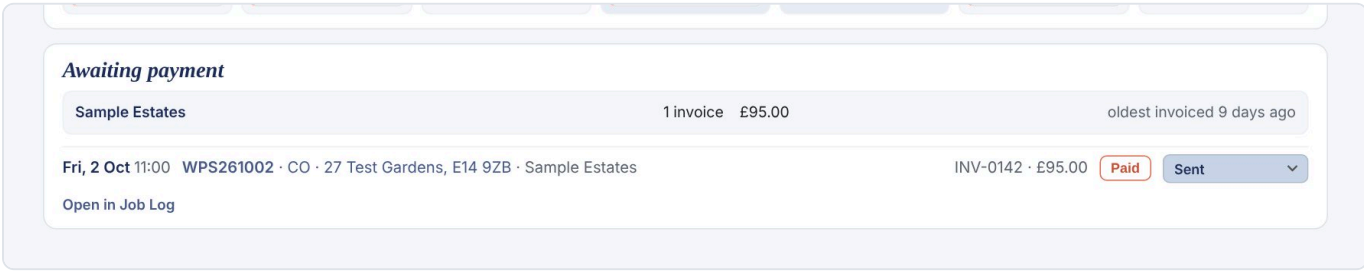

Light.

Night.

Marking an invoice Paid

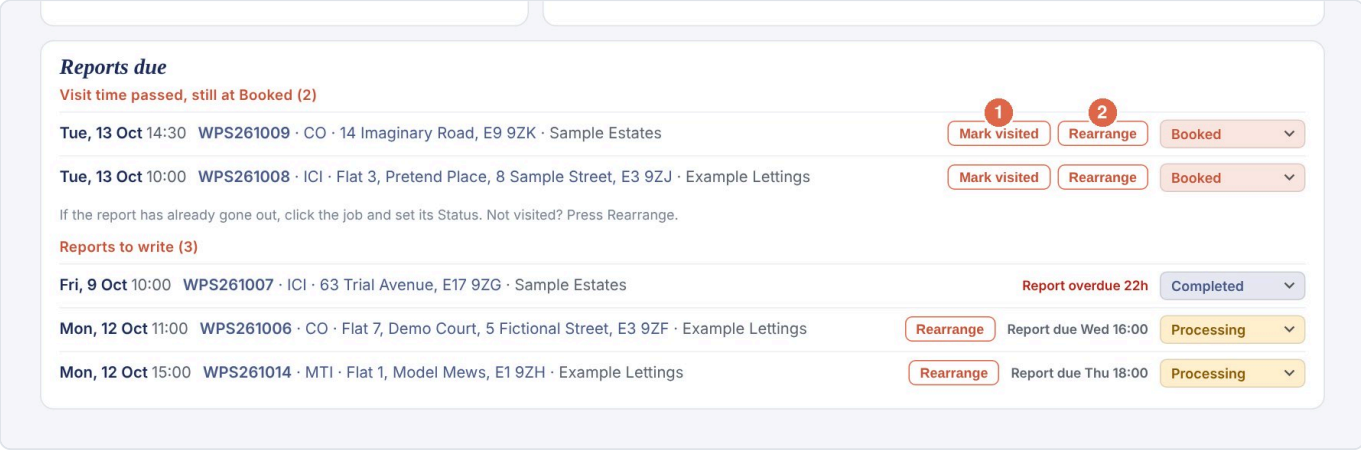

Awaiting payment: who owes what at the top, then each invoice with its Paid button.

At the top, one line per client: how many invoices, the total (from the amount on the Tide card) and how long the oldest has been waiting; over 30 days shows red. The To invoice panel has the same summary for reports not yet invoiced.

Click **Paid** and the job is marked Paid with today's date. An Undo bar shows for 8 seconds in case you clicked the wrong one (section 7). **Open in Job Log** shows the same jobs in the full list.

6. Missed visits: Mark visited and Rearrange

Click the **Reports due** tile. The list has two parts:

Reports due: visits to confirm at the top, reports to write underneath.

- **Visit time passed, still at Booked.** The visit time has gone but the stage wasn't changed. These aren't counted as overdue.
  1 Mark visited : you did go. The job moves to Processing. The report countdown still runs from the visit time, not from the click.
  2 Rearrange : the visit didn't happen.
  If the report has already gone out, use the job's stage box instead.
- **Reports to write.** Visited jobs, with the due time ("Report due Wed 16:00", amber inside 6 hours, red "Report overdue 22h" when late). Jobs at Processing also have a Rearrange button, in case the visit didn't really happen.

Rearranging a visit

The Rearrange panel.

1 **New date known?** Enter the date and time. **Not known yet?** Leave both blank.

2 **Open an email to the tenant in Gmail** is ticked by default. For a mid-term it also says the email will CC bowpropman@winkworth.co.uk. If the job has no tenant email, a warning says the email will open with To blank.

3 Save . What happens:

	New date entered	Left blank
The job	Back to Booked on the new date and time.	Back to Booked with no date or time, so it shows in **Times to agree** with a Rearranged tag.
Calendar	The event moves to the new date.	The event is removed.
Email (if ticked)	Gmail opens a confirmation of the new appointment.	Gmail opens an email asking the tenant for days and times over the next two weeks.
Notes	A line goes at the top of the job's notes, e.g. "Rearranged 13 Oct: visit Mon 12 Oct 11:00 didn't happen. New date Fri 16 Oct 11:30."	

- The email is **never sent by itself**. It opens in Gmail (info@) for you to check and send. Check the From line says hello@ and that your signature is there.
- The emails say "Dear" and the tenants' names, or "Dear Tenants" when no names are saved, and end with "reply to this email or call or WhatsApp 07541 345053". For a mid-term, the confirmation asks the tenant to reply to confirm they're happy for the inspection to go ahead with the access keys if they won't be there.
- When you later put the new date into a rearranged job and save it, a bar appears: `Write confirmation email`. Click it (within 20 seconds) to open the confirmation in Gmail.
- If Google won't remove the calendar event, a bar says so and names the job. Delete the event in Google Calendar by hand.
- A bar at the bottom confirms what happened, e.g. "WPS261006 moved to Times to agree."

7. Job stages and Undo

Every job has a stage, shown as a coloured box (on the Dashboard, in the Job Log and in the job form). Click the box and pick the stage you want. You can go forwards or backwards in one go. In the Job Log's Board view you can also drag a job's card to another column (section 8).

Stage	Means	Move it here when...
Booked	In the diary, not visited yet.	Automatic for new jobs.
Processing	Visited, report being written.	You've done the visit (stage box or Mark visited).
Completed	Report written, not sent yet.	The report is finished.
Sent	Report has gone out. The sent date is recorded. For check-ins, the 7-day comment window starts. The job also joins "To invoice".	Set by itself when the auto-send emails it (section 11). Otherwise, the day you send it (or send it for signature).
Signed	Check-in report signed.	The signed copy comes back, from Acrobat or the WPS signing page. The Dashboard can't see either yet, so this is always your choice in the box.
Deemed agreed	Check-in window closed with no signature and no open comments.	You don't: it's set by itself (section 13).
Archived	Finished and filed. Drops off the Dashboard lists.	The job is fully done.

Check-outs, mid-terms, schedules and clean checks aren't signed. Once they're sent and invoiced, pick Archived in the box.

Undo

The Undo bar.

Every stage or invoice change from a box, **Mark visited** and **Paid** shows a bar at the bottom of the screen for 8 seconds, e.g. "WPS261002 marked Paid". Click **Undo** to put the job back exactly as it was. Missed it? Pick the old stage (or invoice state) in the box again. Moving a job back before Sent clears its sent date.

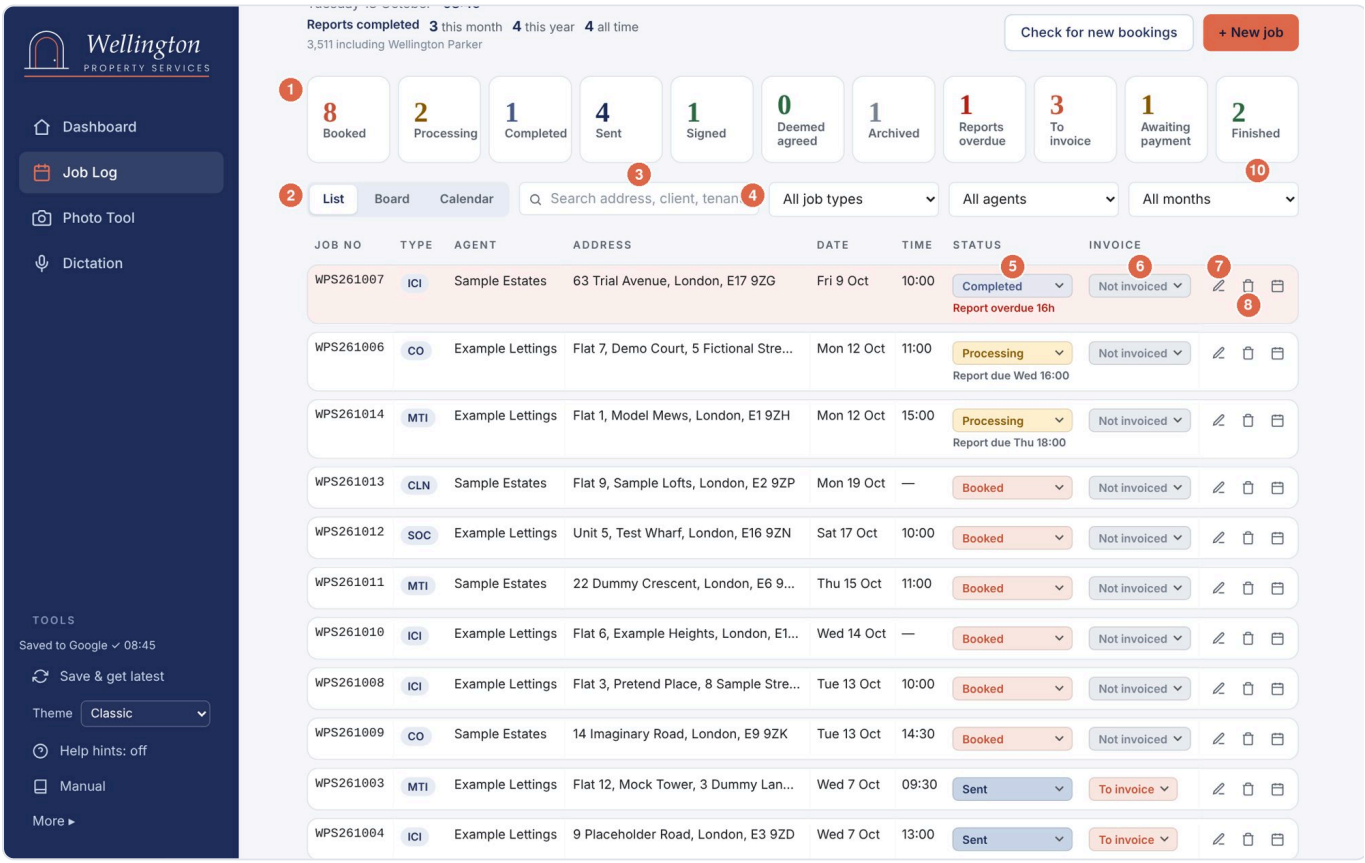

Report due and overdue

Once a job is visited (Processing, or Booked with the visit time passed), it gets a due time: 48 hours for check-outs, 72 hours for everything else, counted from the visit. You'll see "Report due Wed 16:00" under the stage box, amber when it's within 6 hours, and red "Report overdue 16h" when late. Overdue rows in the Job Log are shaded red.

If lots of jobs show as overdue, it's usually because reports were sent but their stage wasn't changed. Set each one to Sent (or further) and the count drops. Reports emailed by the auto-send are set to Sent for you.

8. The Job Log: List, Board, Calendar

Click **Job Log** in the sidebar. It shows every job, with the ones needing a report first, then the newest.

The Job Log as a list.

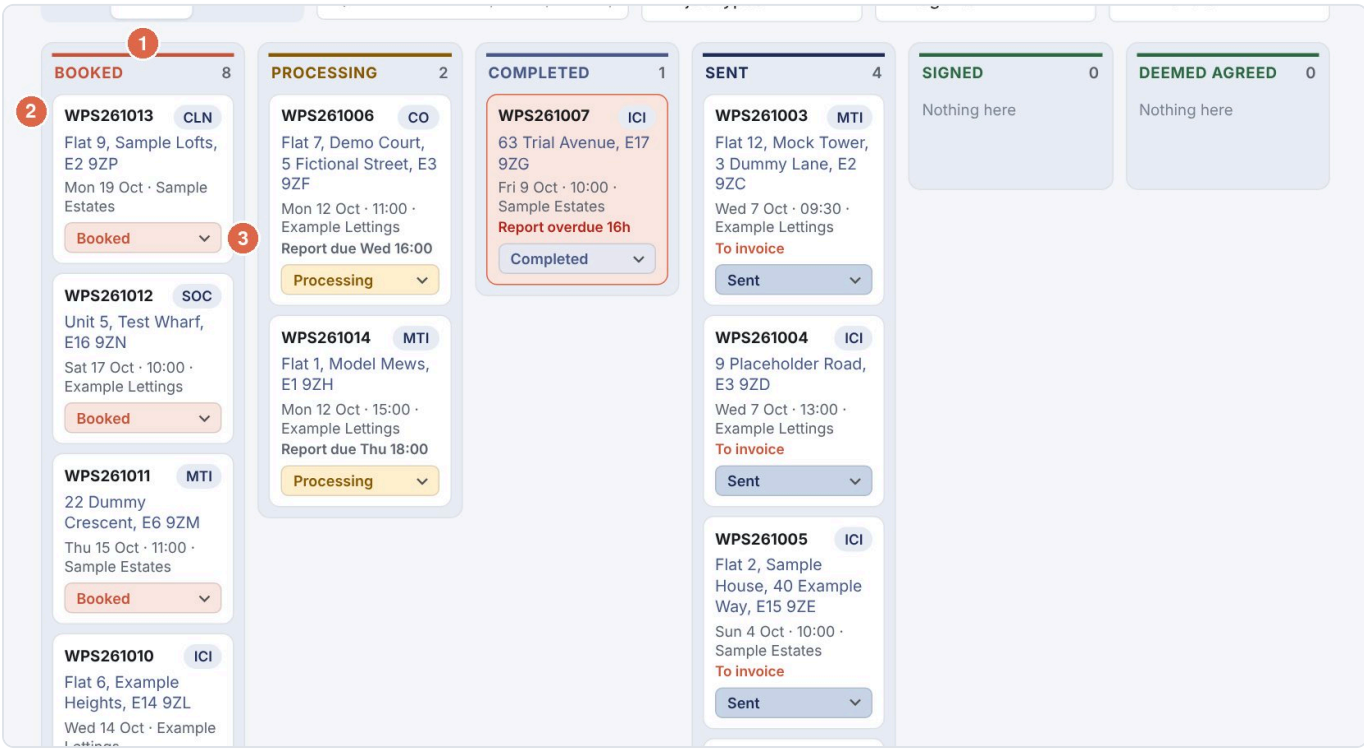

1	**Count cards.** How many jobs at each stage, plus Reports overdue, To invoice and Awaiting payment. Click a card to show only those jobs. Click it again to show all.
2	**List / Board / Calendar.** Three ways to see the same jobs: a list, a board with a column per stage, or a month calendar.
3	**Search.** Type part of an address, postcode, agent, tenant name or email, job number or invoice number.
4	**Filters.** Show one job type, one agent or one month.
5	**Stage box.** Pick the stage. The line underneath says when the report is due, or "Visit done? Move to Processing" once the visit time has passed.
6	**Invoice box.** Pick Not invoiced, Invoiced or Paid. It shows "To invoice" in coral once the report is sent. Undo shows for 8 seconds.
7	**Pencil.** Open and edit the job.
8	**Bin.** Delete the job. It asks first. There's no undo, and it also removes the calendar entry.
	Calendar icon (last on each row) (only when the calendar is connected). Puts the job on the info@ calendar, or updates it. Blue = already on the calendar.

10 **Finished.** Jobs that are paid and whose report is done (check-ins at Signed, Deemed agreed or Archived; other jobs at Sent or later). They're hidden from the main list so it stays short. Click the card to see them. Search still finds them.

The Job Log keeps your place: open a job, close it, and the list is where you left it.
Check for new bookings (top right) does the bookings part of Check everything now.

"Finished" is not the same as the "Completed" stage: Completed means the report is written but not sent.

Board view

1 One column per stage, with how many jobs. 2 A job card. 3 Its stage box.

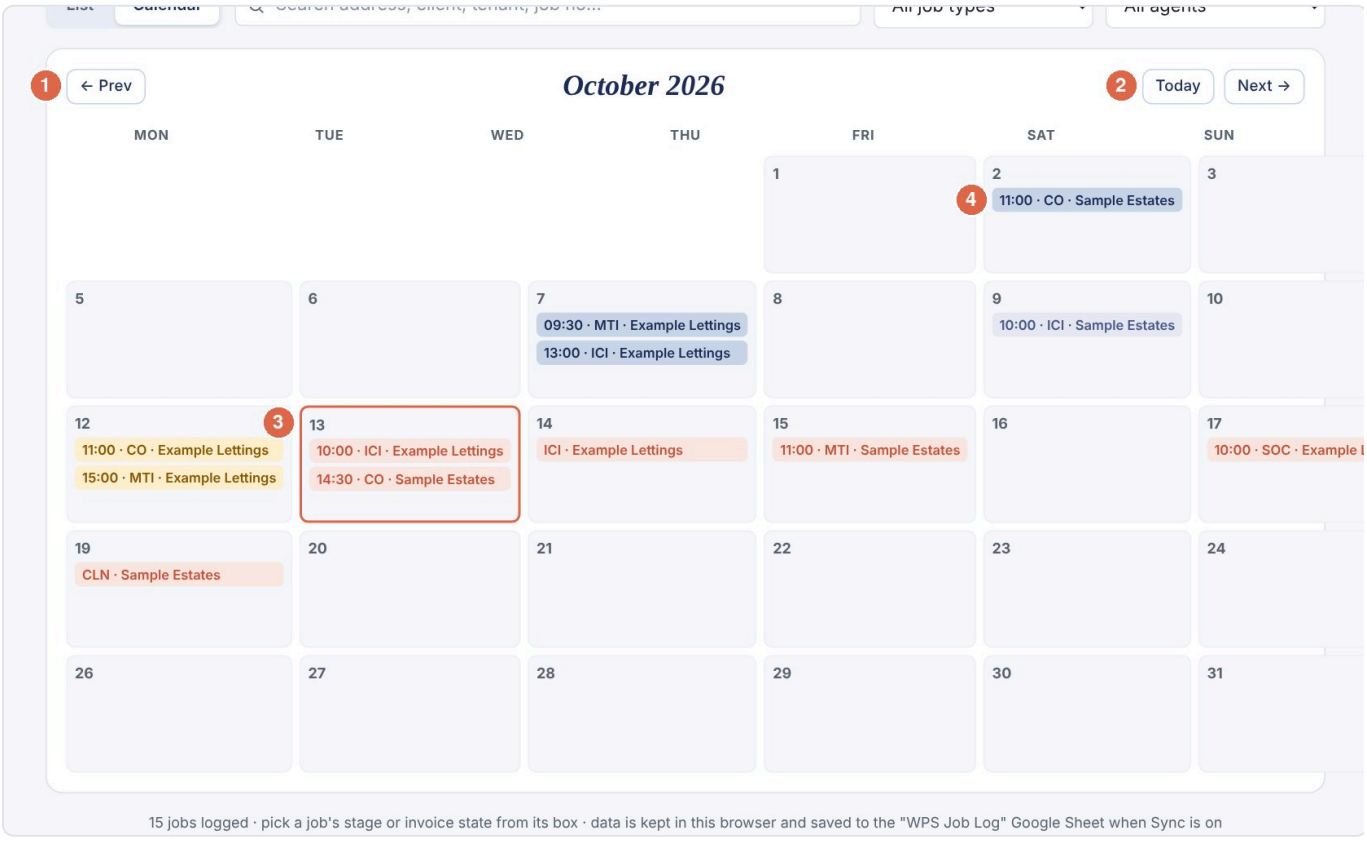

Click **Board**. Each column is a stage: Booked, Processing, Completed, Sent, Signed, Deemed agreed (Archived only when you've clicked the Archived card). Cards are in the same order as the list, report due first. Each card shows the job number, type, address, date, time, agent, when the report is due, and whether it's to invoice. Overdue cards are red.

- **On the PC:** drag a card into another column to move it to that stage.
- **On the phone:** pick the stage from the box on the card.
- Click the address to open the job. The Undo bar shows after every move. The search box and filters work on the board too.

HOW THIS WORKS Hide
Board shows one column per stage. To move a job on a PC, **drag its card** to another column. On the phone, **pick the stage** from the box on the card. **Click the address** to open the job. Red cards are overdue. **Undo** shows for a few seconds after each move. The cards above count jobs at each stage; click one to show only those.

The Board's help box (Help hints on).

Calendar view

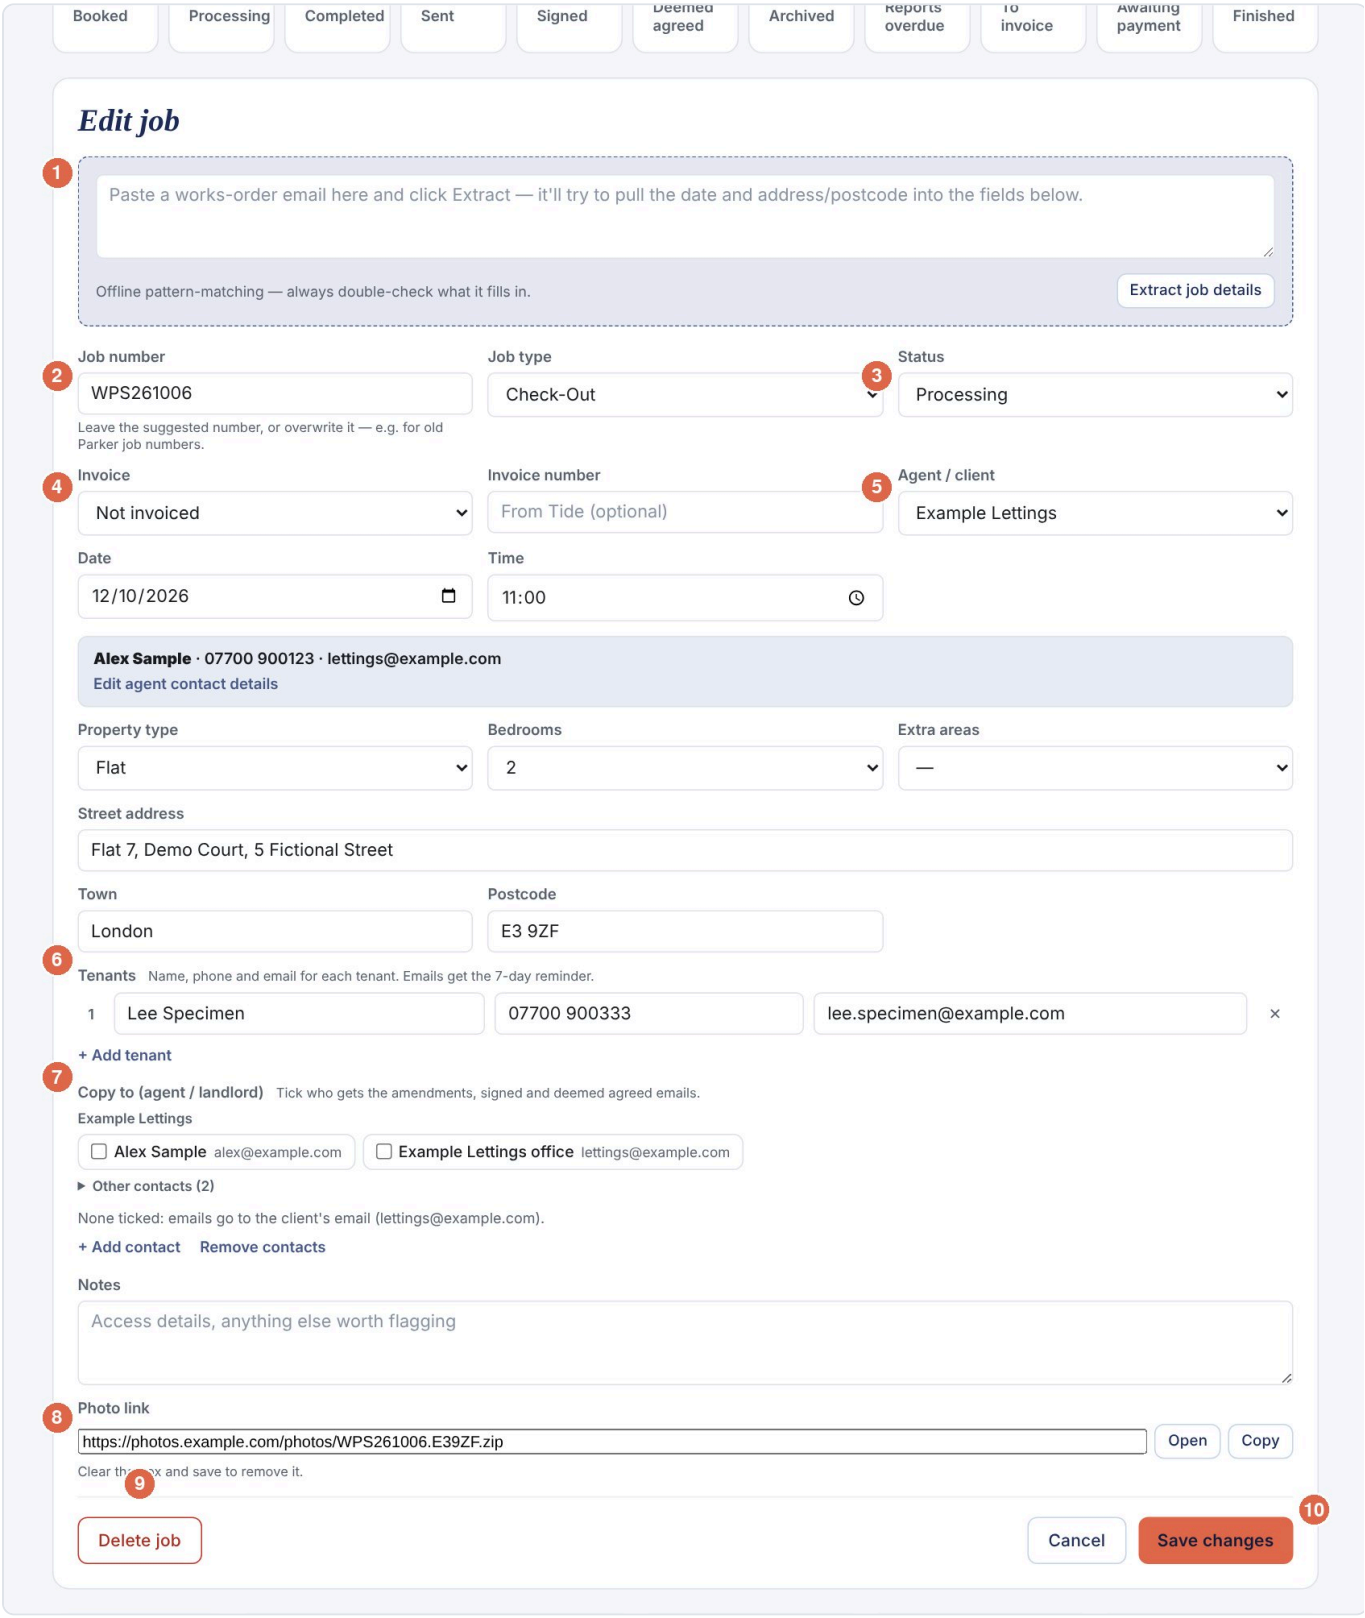

The month calendar. Each job is coloured by its stage.

1 Prev / Next change month. 2 Today jumps back to this month. 3 Today has a coral border. Click an empty part of any day to add a job on that date. 4 Click a job to open it. Hover over it on the PC to see the full address.

9. Adding and editing a job

Click **+ New job** (top right of the Dashboard or Job Log), the + on a day, or an empty calendar day. To change a job, click its address or the pencil. The same form opens either way.

An existing job open in the form.

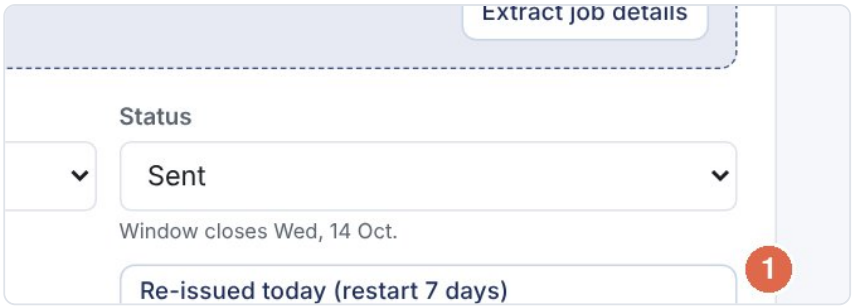

1. **Paste box.** Paste the agent's booking email and click **Extract job details**. It fills in the date, address, postcode and job type it can find. It works best when the address and postcode sit on their own line. Always check what it fills in.
2. **Job number.** Fills itself: WPS + year + month + number, e.g. WPS261015. Numbers are never reused, even after a delete. You can type over it (e.g. for an old Parker number).
3. **Status.** The stage, the same as the stage box in the lists.
4. **Invoice** and **Invoice number** (from Tide). Usually filled by Mark invoiced (section 10).
5. **Agent / client.** Pick from the list. Choose **+ Add new agent...** at the bottom to add one. The box underneath shows that agent's saved contact; **Edit agent contact details** changes it for every job with that agent.
6. **Tenants.** One row per tenant: name, phone, email. **+ Add tenant** adds a row (up to 6); × removes one. The emails get the signing links on check-ins (section 12), the 7-day reminder and the Rearrange emails. A tenant email that doesn't look right stops the save until it's fixed. Older jobs that had tenants typed as one line are split into rows for you, with a pink "Split from the old text" line: check the rows, then save.
7. **Copy to (agent / landlord).** Tick who gets the reports the auto-send emails (unless a client rule says otherwise, section 11) and the "amendments in progress", "signed" and "deemed agreed" emails. The job's agent's contacts are listed first; **Other contacts** folds the rest away. **+ Add contact** saves a new name and email and ticks it. **Remove contacts** lets you delete saved contacts (jobs that already copy to them keep the address). The line underneath says who will get the emails; with nothing ticked they go to the agent's saved email.
8. **Photo link.** Saved by the Photo Tool, or paste a link (e.g. Dropbox) by hand. The auto-send puts it in the report email. **Open** opens it, **Copy** copies it for the report email. It must start with http:// or https://. Clear the box and save to remove it. A link the Photo Tool saves while the form is open is kept, unless you changed the box.
9. **Delete job** (existing jobs only). Asks first, removes the calendar event too, can't be undone. To keep a record, set Status to Archived instead.
10. **Save job** (or **Save changes**). If the calendar is connected, the job goes on the info@ calendar too. **Cancel**, the browser's Back button or the **Esc** key close it without saving. If you've changed anything, it asks first: OK throws the changes away, Cancel keeps you editing. Leaving for another page or closing the tab with unsaved changes also asks first.

The other boxes: job type, date and time of the visit, property type, bedrooms, extra areas, street address, town, postcode, and notes (access details, key collection and so on).

Calendar events are titled "<job number> - <type> - <address>". A job with a time gets a timed event, a job without a time gets an all-day event; changing between the two updates the same event. If Google refuses, a message names the job and gives Google's reason.

Re-issuing a check-in report after amendments

When you've corrected a check-in report after tenant comments and sent it again, open the job. Under Status you'll see when its window closes and a button:

1 Re-issued today (restart 7 days)

Click it the day you re-send. The job goes back to Sent and a new 7-day window starts, covering the changed items only. The original sent date is kept, so turnaround figures aren't affected.

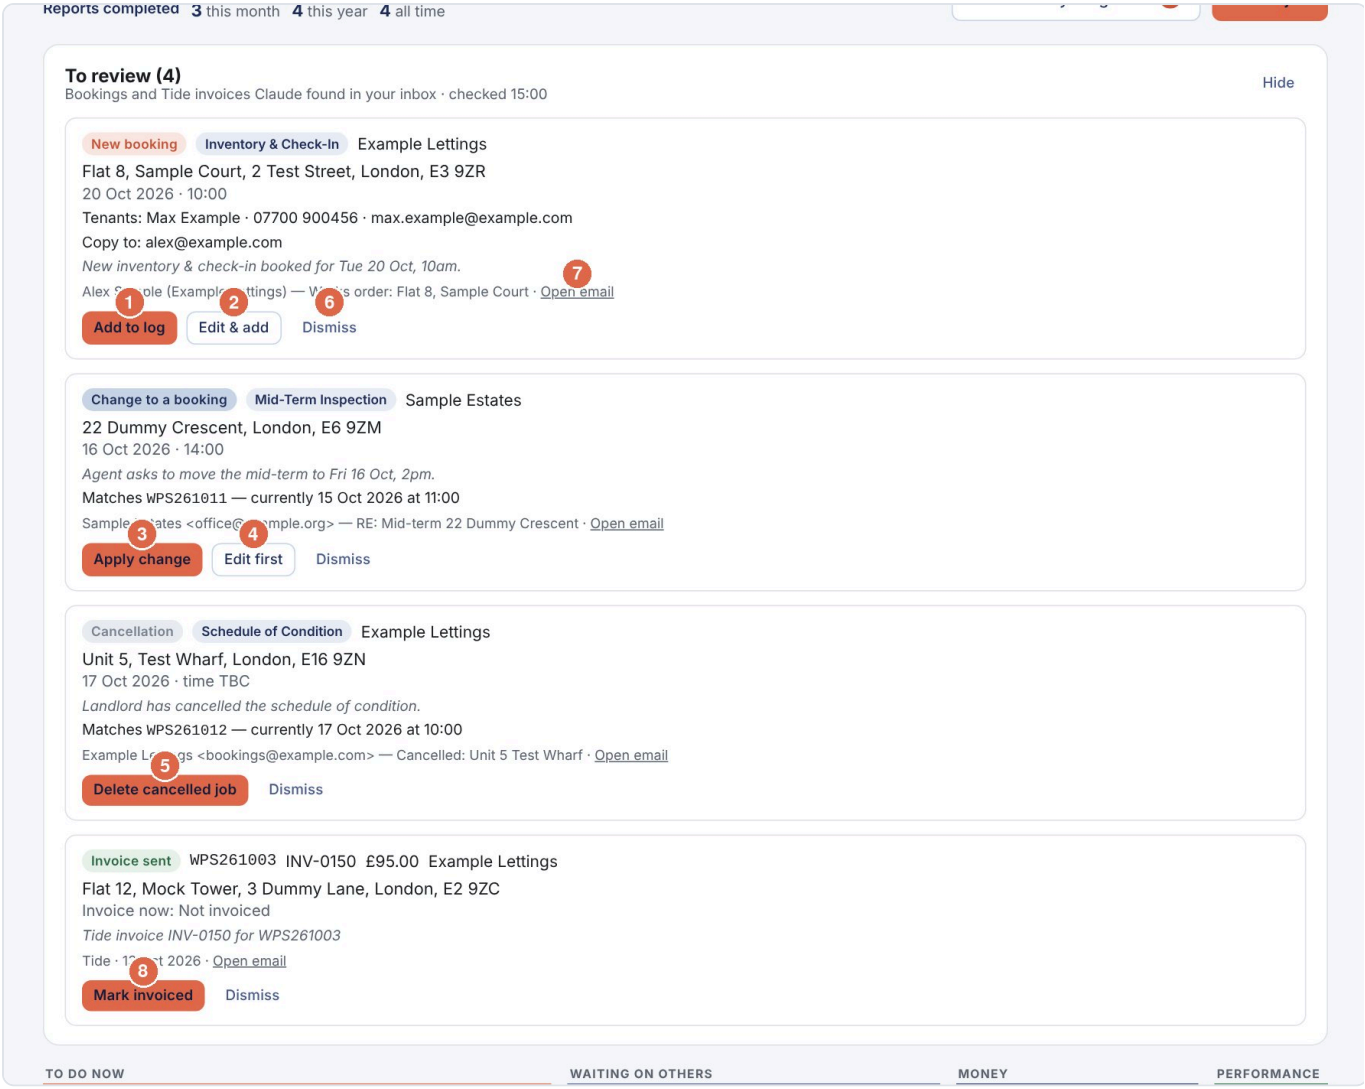

10. The To review tray

Three times a day (7:51, 12:51 and 15:51, Monday to Saturday) Claude reads the info@ inbox (mail to every WPS and old Wellington Parker address lands there) and lines up:

- **New bookings**, including short requests like "check-in at 402a on the 17th" (the month, address and postcode are completed from the sender's older emails and flagged).
- **Changes** to a booking, including tenant details sent after the booking.
- **Cancellations.**
- **Tide invoices you've sent** (the copy Tide emails to info@).

It also picks up the tenants' names, phones and emails, and takes the person who sent the instruction as the Copy to. If a works order looks copied from an old one (old tenant details), it leaves the tenants out and says so on the card. WhatsApp bookings can't be seen: add those by hand.

Click **Check everything now** on the Dashboard (or **Check for new bookings** on the Job Log page). The first time each session Google may ask you to sign in (choose info@). The cards appear in a **To review** tray:

The To review tray: a new booking, a change, a cancellation and a Tide invoice.

Card	Buttons
New booking (coral label)	1 **Add to log** adds it straight away with the next job number, tenant rows and Copy to filled in. The sender is added to your saved contacts. 2 **Edit & add** opens it in the job form first, so you can check or add details, then Save job. If it says "Possible duplicate of WPS...", it looks like a job you already have. Check before adding.
Change to a booking (blue label)	It shows which job it matches and the current date and time. A change that only brings tenant details says "Date unchanged". 3 **Apply change** updates the date and time on that job and adds a note. Tenant details are added only if the job has none; tenants already on a job are never overwritten (different details go into the notes). 4 **Edit first** opens the job with the change filled in, for you to check and save.
Cancellation (grey label)	5 **Delete cancelled job** removes the matching job and its calendar entry. It asks first. No undo.
Invoice sent (green label)	Shows the job number, invoice number, amount and client, and the job's invoice state now. 8 **Mark invoiced** sets the job to Invoiced with that invoice number and the email's date. If the job is already Paid the button says **Save invoice no.** and it stays Paid. If the job already has a different invoice number it asks before replacing it. "Already recorded ✓": nothing to do, click **Clear**. No WPS number in the email, number not found, or the number on two jobs: a warning shows and only Dismiss is offered. Set the invoice on the right job by hand.
Report sent (blue label)	Only shows when the auto-send emailed a report but the job couldn't be set to Sent, with the reason (for example the job number isn't in the log, or the type doesn't match). Set the stage by hand if the report did go out, then **Dismiss**. When all is well there's no card: the job is set to Sent and a line at the top says "Reports emailed automatically: WPS... marked Sent".
Every card	6 **Dismiss** ignores it. Nothing in the log changes. 7 **Open email** opens the original email in Gmail. Use it to double-check.

Hide (top right of the tray) folds it away. Anything you haven't handled shows again next time. Cards you've dealt with are remembered in the Google Sheet, so the phone won't offer them again. Cards older than 14 days are hidden.

> **"Couldn't find this job in your log"** on a change or cancellation means Claude couldn't match it to a job. Use Edit & add if it should be logged, or Dismiss it. Each card's italic line is Claude's summary of why it's there: read it, especially for anything flagged.

11. Sending reports automatically

Check-outs, mid-terms and schedules of condition are emailed for you. Inventories and check-ins go out through the signing page (section 12). You only save the finished PDF into one folder.

How to send a report

1. Check the job in the Job Log: right **client**, **type**, address and postcode, and a **photo link**. On a check-in, check the tenant rows have emails.
2. Save the finished PDF into the Drive folder **WPS Ready to send**. On the HP it is **G:\My Drive\WPS Ready to send** (Google Drive for desktop, signed in as info@). The file name must have the job number in it once, e.g. **WPS000000.E39ZZ.12.10.26.MTI.pdf**.
3. That's it. Every 15 minutes the script looks in the folder. A file saved in the last 3 minutes waits for the next run, so a half-copied file is never sent.

What happens when it sends

- The report is emailed from **reports@wellington-ps.co.uk** with the PDF attached and the photo link in the email. A check-out email carries both the check-out and the check-in photo links.
- **Who gets it:** Winkworth - Bow reports go to bowpropman@winkworth.co.uk, starting "Hi Riley,". For other clients it goes to the people ticked in the job's **Copy to**, or if none, the client's email on the Clients tab, starting "Hello,". **Mid-terms always copy in bowpropman@winkworth.co.uk.**
- The PDF moves to **WPS Ready to send › Sent**.
- A "Report sent" confirmation goes to reports@ (filed under Reports).
- A line is added to the **Report sends** tab of the WPS Amendments Sheet.
- The next time you click `Check everything now`, the job is set to Sent with the time it was emailed.

When a report is held

If anything is missing or doesn't match, nothing is sent. The PDF moves to **WPS Ready to send › Held** and info@ gets an email **"Report held, not sent - WPS..."** saying why. Fix the problem, then move the PDF from Held back into WPS Ready to send. It's picked up within 15 minutes. The script never guesses a recipient or a link.

The held email says	Fix
No WPS job number in the file name / more than one job number	Rename the file with the one right job number.
Not a PDF / PDF is over 24 MB	Save as PDF. For a big one, compress it or send it by hand.
WPS... is not in the Job Log / is on 2 rows	Add the job, or sort out the duplicate.
File name says MTI but the Job Log says CO	Correct whichever is wrong.
... reports are not sent automatically yet	Only check-outs, mid-terms, schedules and check-ins are sent. Send other types by hand.

Already sent by this script / Job Log has it at Sent already	To send again on purpose, put **RESEND** in the file name, e.g. WPS000000.E39ZZ.12.10.26.MTI RESEND.pdf.
Job Log row has no address / postcode	Fill it in on the job.
No recipient	Tick a Copy to on the job, or add the client's email on the Clients tab.
No photo link	Put the photo link on the job (Photo Tool or paste it), or make sure page 1 of the report links to it.
No check-in photo link found (check-outs)	Make the check-in reference on page 1 a link, or add a line **Check-in photos: <link>** to the job's notes. Without either, it looks for the latest check-in in the Job Log at the same postcode and door number with a photo link.
Gmail would not send from reports@	Tell Claude. It never falls back to another address.

The first real auto-sent report hasn't been checked end to end yet. When it goes, check info@'s Sent mail (from reports@, to the right person), the Report sends tab, that the PDF is in Sent, and that the job shows Sent after Check everything now.

12. The check-in signing page

Inventory and check-in reports are signed on WPS's own signing page instead of Acrobat. It went live on 18 October 2026, 01:38. You send a check-in the same way as any other report: save the PDF into **WPS Ready to send** (section 11).

Before you save the PDF

- The job is an Inventory & Check-In in the Job Log, with **1 to 6 tenant rows that have emails**.
- The **client** is right. Clients whose name starts with Winkworth, Move Lettings, McQueens, Chestertons or JAGS are letting agents: they get a copy, they don't sign. Any other client is treated as a **private landlord**, who signs too and needs an email on the Clients tab. To skip the landlord, put **Landlord signs: no** in the job notes.
- The report is made from the **ICI_2** template and its **last page is the Declaration** with the six Name / Signature / Date rows. Not password-protected.

If any of these isn't right, the PDF is held and info@ is told why, as in section 11.

What happens

1. Each tenant (and a private landlord) gets **their own email** from reports@ with the report attached and a **Review and sign the report** button. Each link works only for that person, so tenants are never copied in on each other's emails. The email also gives the comments form link and the date the 7-day window closes.
2. The agent gets a separate **"sent for signature"** email with a copy of the report. reports@ is copied in.
3. On the page, the tenant reads the report, confirms their name, types or draws a signature and ticks the declaration. They get a "signature received" email.
4. **Two days before the window closes**, anyone who hasn't signed gets one reminder with their own link. (For these jobs this replaces process email D.)
5. When everyone has signed, a **signed copy** is made within 15 minutes: names, signatures and dates on the declaration page, plus a **signing record** page at the end. Your original PDF is never changed. It's saved in **WPS Ready to send › Signed** and emailed to every signer and the agent, with reports@ copied in ("Report signed and completed - WPS...").
6. **You set the job to Signed** when that email arrives. The Dashboard doesn't do it by itself yet.

Where to see who has signed

The **Signings** tab in the WPS Amendments Sheet has one row per signer: when the link was sent, first opened, signed, and how (typed or drawn).

- **Need to send a corrected report?** Put **RESEND** in the file name and save it into the folder again. A new signing round starts and the old links stop working.
- **Nobody signs and no comments are open?** Deemed agreed works as before (section 13).

- If the signed copy can't be made, info@ gets "Signed copy NOT finished" with what to do. Tell Claude.

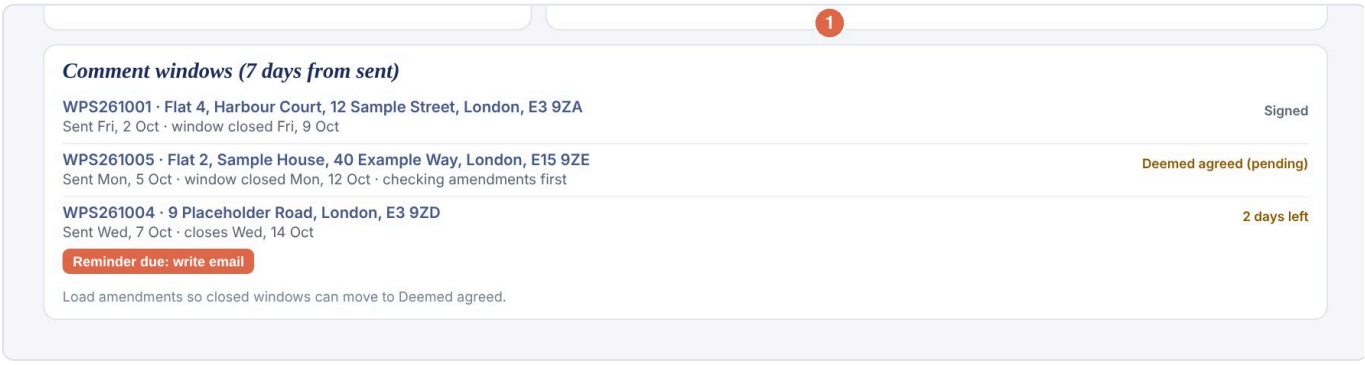

The first real check-in on the signing page hasn't been watched end to end yet. Tell Claude when you save it, and Claude will check info@'s Sent mail (one email per tenant, and the agent's copy) and the Signings tab.

Acrobat stays available (sidebar link) for anything the signing page can't take, for example more than 6 tenants.

13. Comment windows and amendments

This only applies to inventory and check-in reports. Tenants have 7 days from when the report is sent to send comments through the comments form. If they don't comment or sign, the report is deemed agreed.

The Comment windows tile

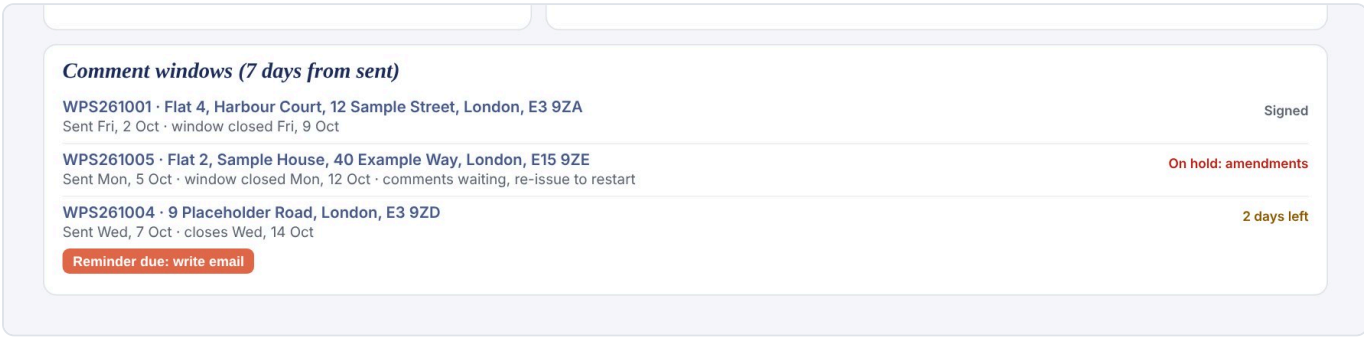

Each sent check-in report with its window: when it was sent, when it closes, days left.

Each line shows when the report was sent and when the window closes. Amber means 2 days or less left.

The 7-day reminder. At 9am each day the reminder email to tenants goes out by itself from reports@ for any check-in with 2 days or less left, as long as the job has tenant emails. Check-ins sent through the signing page get the signing page's own reminder instead (section 12). The line then says "Reminder sent automatically" and you don't need to do anything.

If it hasn't gone (for example no tenant emails were on the job), 1 a coral **Reminder due: write email** button appears. It opens a ready-written reminder in Gmail, addressed to the tenant emails on the job. Pick reports@ as the From address, check it and send. The line then says "Reminder sent" with an undo link if you clicked by mistake.

When the window closes

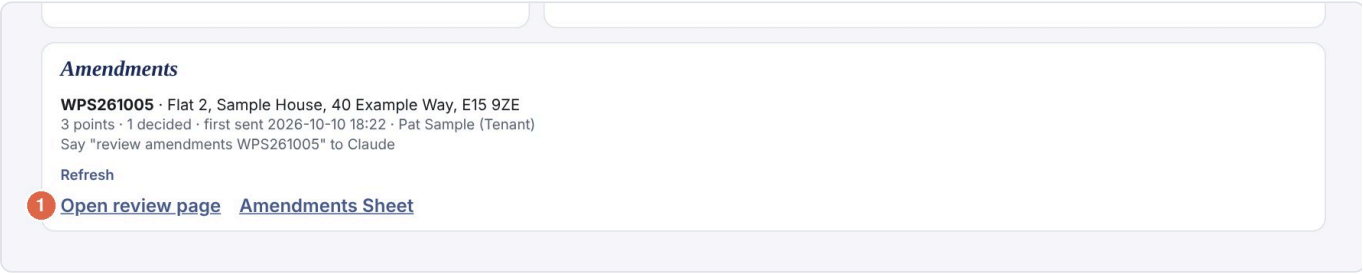

After the window: one report on hold because comments are open.

- **No comments open:** the job moves to Deemed agreed by itself. To be safe this only happens when the amendments were loaded in the last 30 minutes, so a job with comments waiting is never deemed agreed by mistake. With Google signed in, the page re-reads the amendments quietly when it refreshes.
- **Comments still open:** it shows **On hold: amendments**. Deal with the comments, re-send, and click Re-issued today on the job (section 9).
- **Not checked yet:** "Deemed agreed (pending)" means the amendments haven't been loaded recently. Click Check everything now, or the Amendments tile and Load amendments.

The automatic emails to the agent or landlord (the job's Copy to) are covered in section 20.

The Amendments tile

Click the tile, then **Load amendments** (Check everything now does this too). Google may ask you to sign in. It reads the WPS Amendments Sheet and lists every job with tenant comments still open:

One job with open comments: how many points, how many decided, who sent them.

The comments form

Tenants send comments through the comments form (the link in the report email and on the signing page; **Amendments form** in the sidebar). The form only accepts a real WPS job number with the property's matching postcode. Photos must be JPEG. The receipt goes only to emails already on the job.

Working through the comments

To work through them, say **"review amendments WPS261005"** (with the job number) to Claude in the WPS project chat on the PC. Claude fills in the review page.

1 **Open review page** is where you decide each point: Make the change, Add to Notes or No change. **Amendments Sheet** opens the raw list. **Refresh** reads it again.

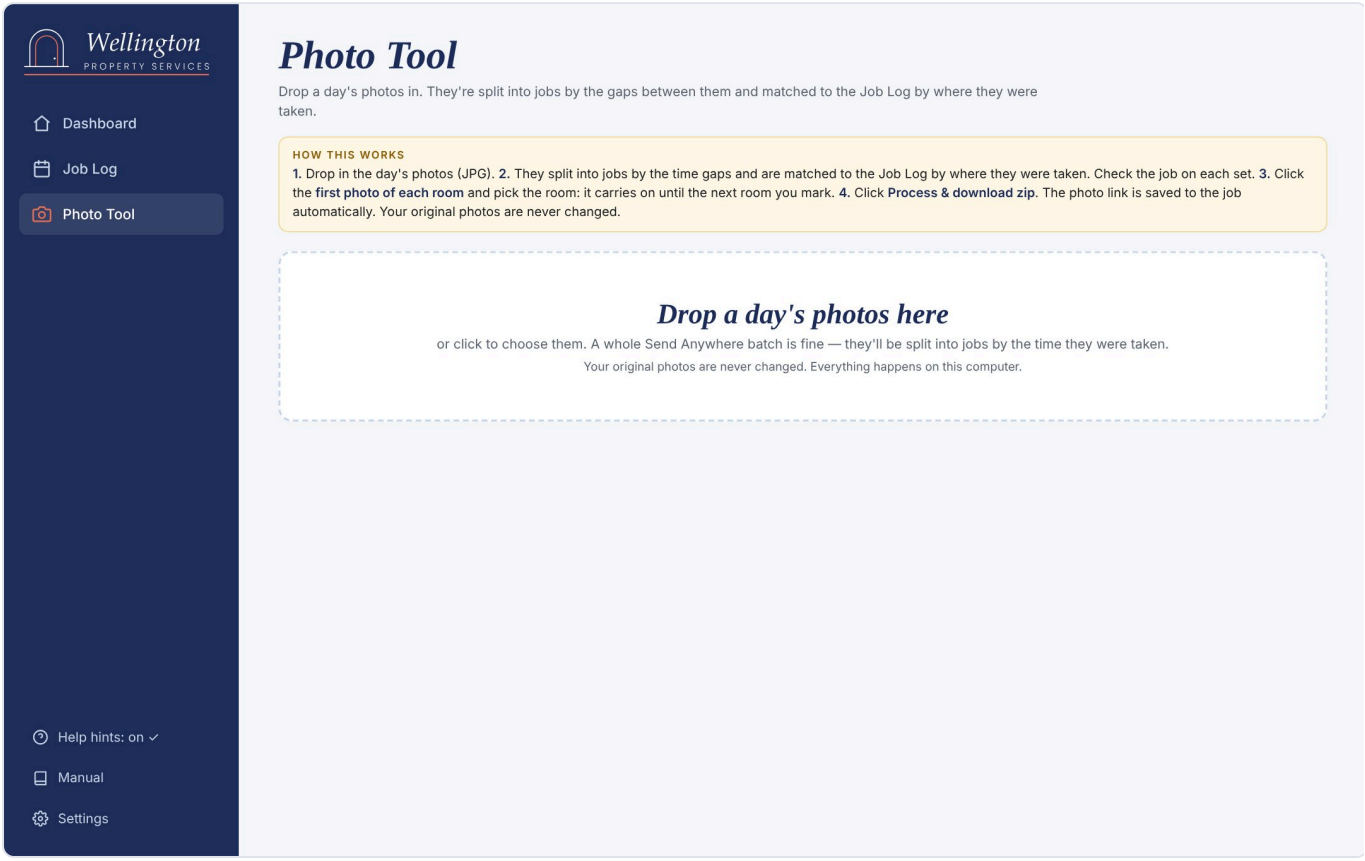

14. The Photo Tool

Use it on the **PC**, after a day of visits. It does four things for each job: splits the day's photos into jobs, names them by room, adds the watermark, and makes one zip per job. Everything happens on the PC. **Your original photos are never changed.**

Your work is kept. You can go to the Dashboard or another page and come back, or close and reopen the tab: the photos, sets and rooms you've marked are kept on that device until you click Start again. The page shows **Kept on this device ✓ — safe to switch pages**.

> **Before you start:** open the Photo Tool from the sidebar, in the same Chrome you use for the Job Log, so it can see your jobs. On the iPhone, set Settings › Camera › Formats to **Most Compatible** so it shoots JPG. HEIC photos work but lose their "time taken", which the tool relies on.

Step 1: drop the photos in

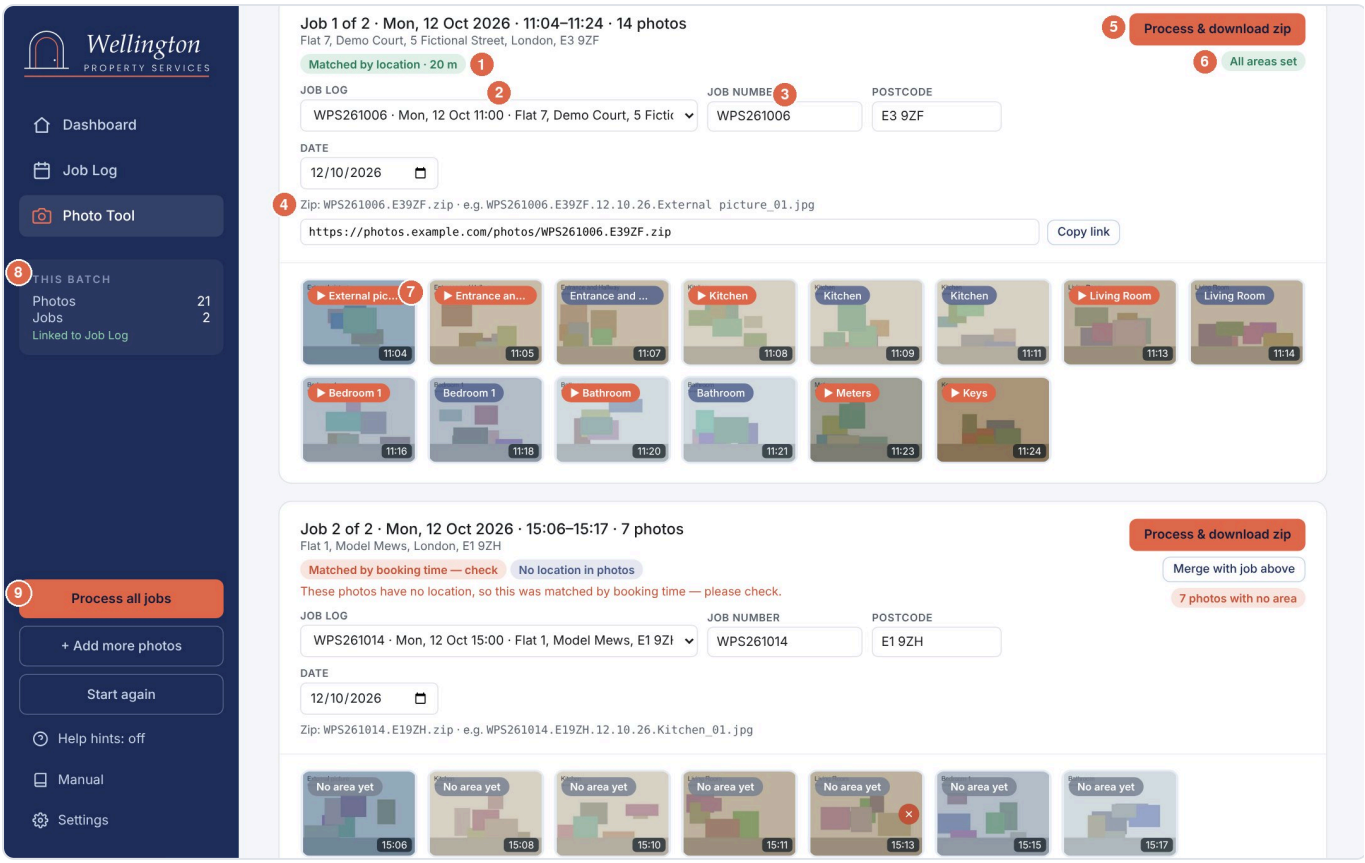

The Photo Tool before any photos are added (Help hints on).

Drag the whole day's photos onto the dashed box, or click it and choose them. A whole Send Anywhere batch is fine.

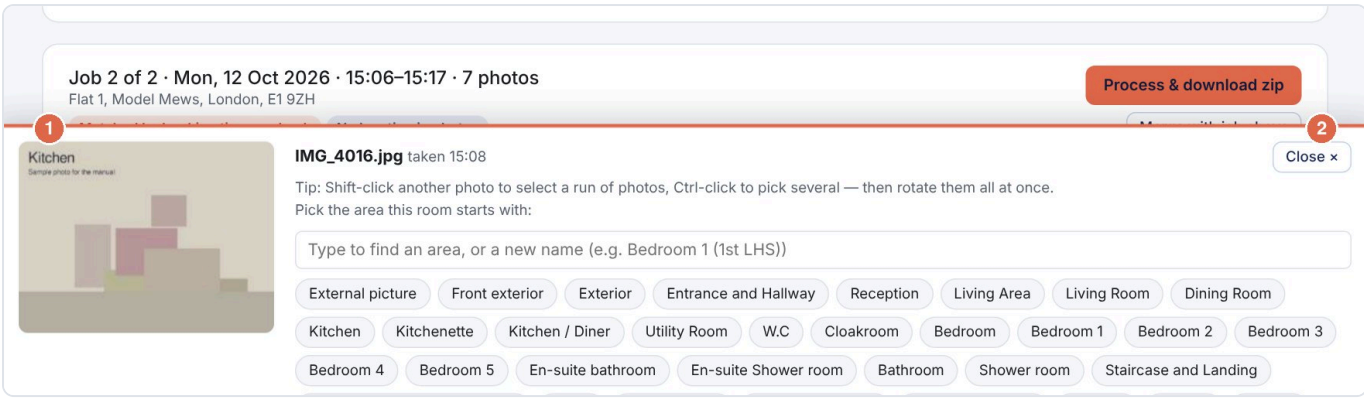

Step 2: check each set

The photos are split into sets wherever there's a gap of 30 minutes or more between shots. Each set is matched to a job by **where the photos were taken**, or by booking time if the photos have no location.

Two sets from one day. The first has its rooms marked.

1. **How it matched.** Green "Matched by location" is reliable. Amber "Matched by booking time — check" or "Location match — check" means look at it. "Not matched — pick the job" means choose one.
2. **Job Log.** The job this set belongs to. Jobs near where the photos were taken are listed first, with the distance. Pick a different one if it's wrong. The list only offers jobs dated from 21 days before to 2 days after the photos.
3. **Job number and postcode.** Fill in from the job. You can type them by hand. The zip button stays grey until both are there.
4. **Names preview.** What the zip and photos will be called, e.g. WPS261006.E39ZF.zip and WPS261006.E39ZF.12.10.26.Kitchen_01.jpg.
5. **Process & download zip** for this job (step 4).
6. **Areas check.** "All areas set" in green, or how many photos still have no room.
7. **Photos.** ▶ in coral marks the first photo of a room. The grey label on the following photos shows they belong to that room.
8. **This batch.** How many photos and jobs, and that it can see the Job Log.
9. **Process all jobs** makes every zip in one go. Below it, **+ Add more photos** (anything you missed) and **Start again** (clears the tool, originals untouched).

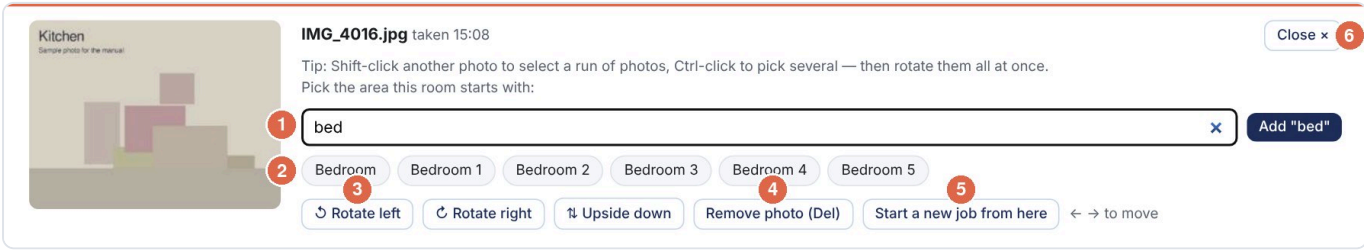

A set with no location in the photos: 1 check the job is right. 2 Merge with job above.

- **One visit split in two** (you stopped for a long time): click **Merge with job above** on the second set.
- **Two visits joined together** (they were close in time): open the first photo of the second visit and click **Start a new job from here**.
- **You went back to the same property later:** pick the same job on both sets. They're put into one zip.

Step 3: mark the rooms

Click the **first photo of each room**. A panel opens at the bottom:

The photo panel, with "bed" typed in the area finder.

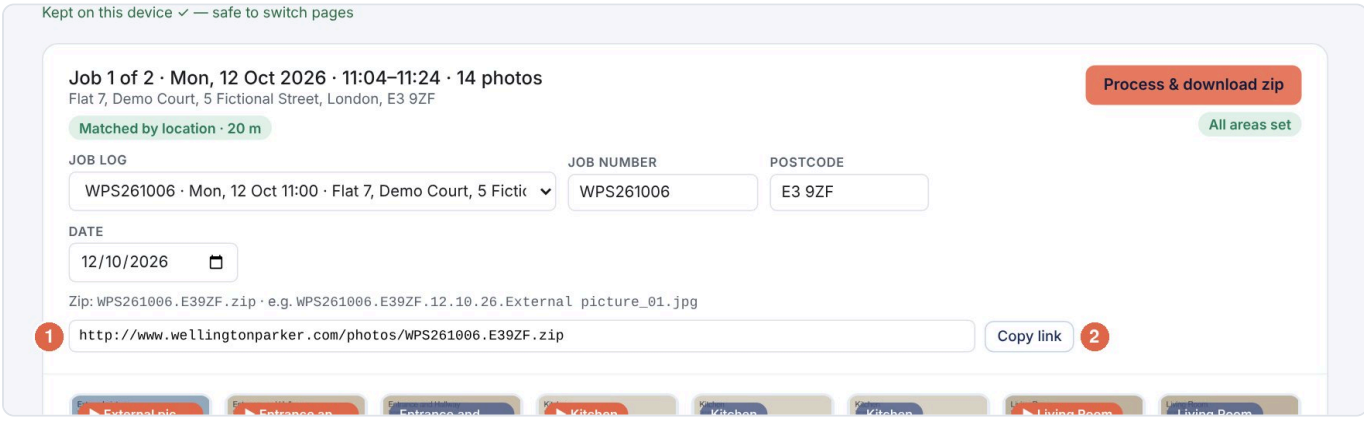

1	**Find an area.** Start typing (e.g. "bed") and the room buttons narrow down to the ones that match. A name that isn't in the list (e.g. "Bedroom 1 (1st LHS)") gets an **Add** button: click it or press Enter and it's added to the list for next time.
2	**Room buttons**, in walk-round order. Click the room. Every photo after it belongs to that room until the next one you mark. The panel then moves to the next photo, so you can carry on. **Remove room start** undoes a room you marked by mistake.
3	**Rotate** left, right or upside down.
4	**Remove photo** leaves it out of the zip. It isn't deleted from your PC. Click again to put it back.
5	**Start a new job from here** splits the set at this photo.
6	**Close** (or Esc).

Keyboard shortcuts in the panel: ← → previous/next photo, R rotate, Del remove, Esc close. To rotate several at once, click one photo, then **Shift-click** another to select the run between them (or **Ctrl-click** to pick photos one by one), and use the buttons in the panel.

The **External picture** room is special: as well as going in the zip, a clean copy (no watermark, larger) is saved separately as the report cover photo, e.g. WPS261006.E39ZF.cover.jpg.

Step 4: process and download

Click **Process & download zip** on the set (or **Process all jobs**). A progress bar shows each photo. When it's done:

1 The photo link. 2 Copy link.

- The zip and the cover photo are in your **Downloads** folder.
- The **photo link** is saved to the job in the Job Log by itself, which clears it from the "Photos not done" tile. You can see it, open it and copy it in the job form too (section 9). **Copy link** copies it for the report.
- The link is only saved to the job when the job was **picked from the Job Log list**. If you typed the job number by hand, paste the link into the job form yourself.
- The tool doesn't upload the zip. Put it on the photos server as you do now, so the link works.

Inside each photo: the date and time it was taken are kept, the location is removed, and a small navy Wellington Property Services tag with the date and time sits in the corner.

Settings

Click **Settings** at the bottom of the sidebar. Settings are saved on that PC.

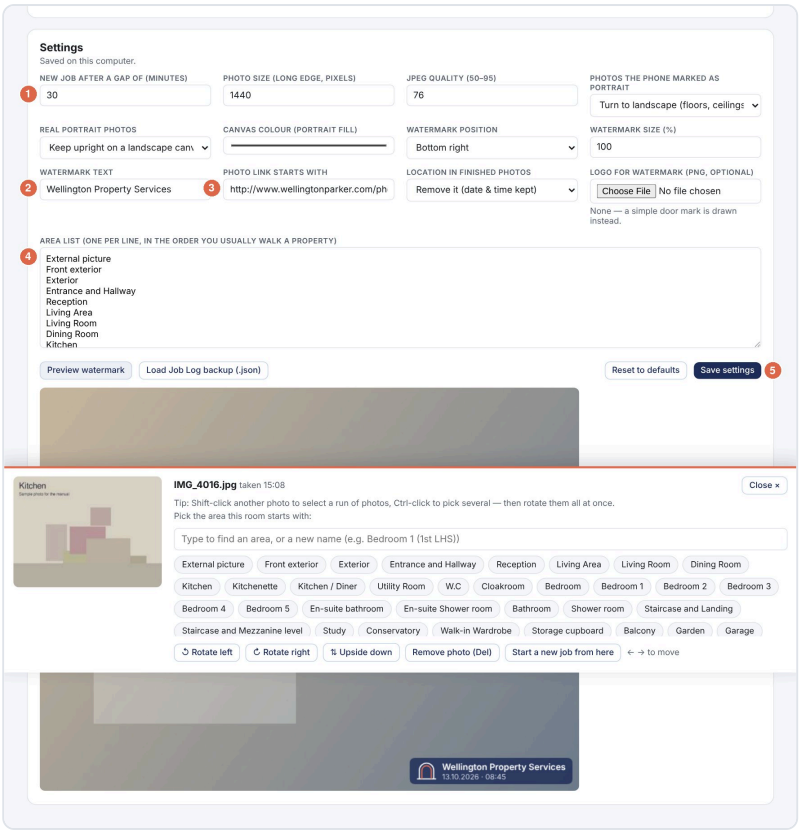

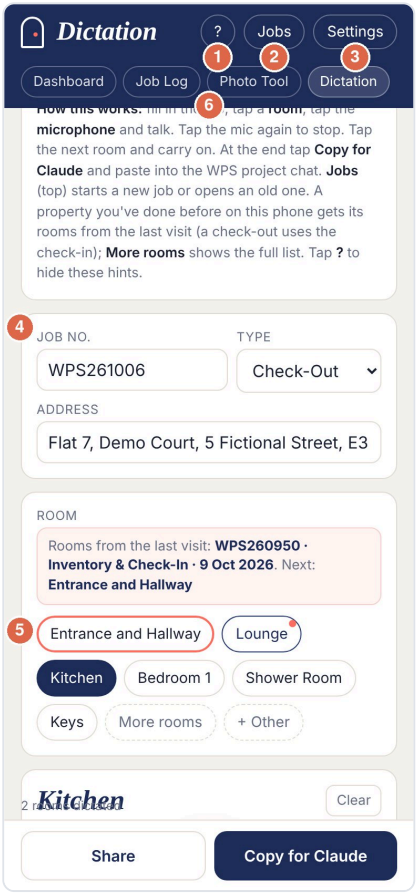

Photo Tool settings.

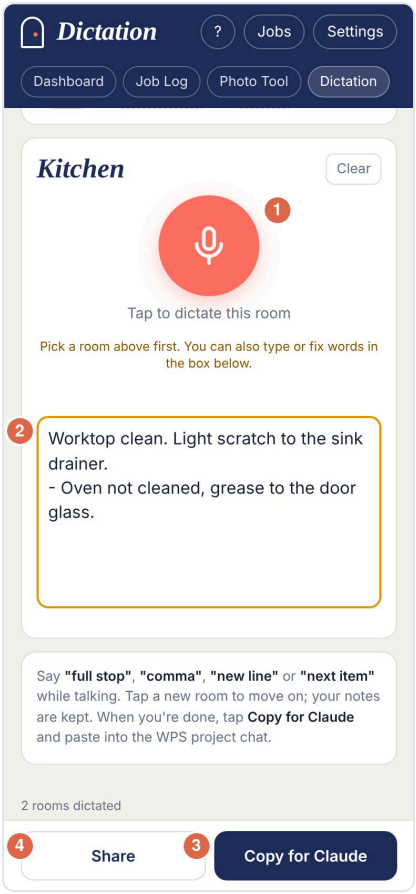

- 1 **New job after a gap of** (minutes). Default 30. Lower it if two nearby visits get joined.
- Photo size, JPEG quality, how portrait photos are handled, canvas colour.
- 2 Watermark position, size and text. Click **Preview watermark** to see it.
- 3 **Photo link starts with.** The web address the link is built from.
- 4 **Area list.** The room buttons, one per line, in the order you usually walk a property.
- 5 **Save settings. Reset to defaults** puts everything back. **Load Job Log backup** is only needed if the tool says it can't see your jobs.

15. Dictation

Use it on the **phone** during a visit. Open it from **Dictation** in the sidebar (on the phone, in the bar along the top). Add it to the home screen so it opens like an app. The notes are kept **on that phone only**, until you copy them out.

The job and the rooms.

Dictating a room.

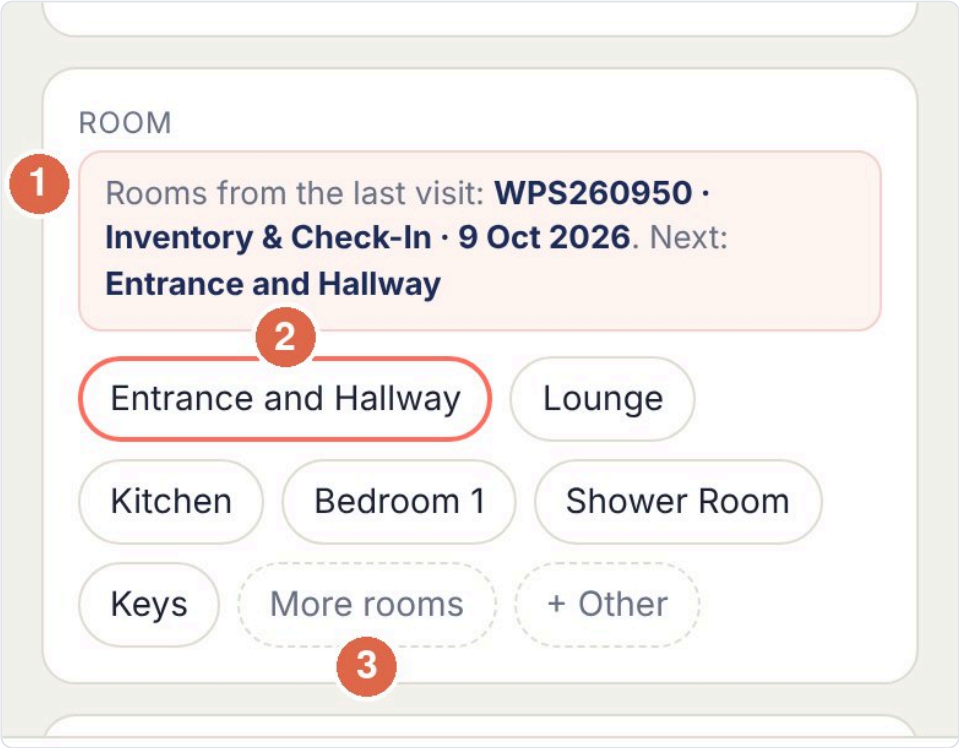

Top bar:

- 6 **Dashboard · Job Log · Photo Tool** links go straight to those pages.
- 1 **?** shows or hides the help lines.
- 2 **Jobs**: your saved dictations, and **Start a new job**.
- 3 **Settings**: word fixes, rooms, audio backup.

Steps:

1. 4 Type the job number. If the job is in the Job Log on that phone, the address and type fill in by themselves. Otherwise pick the type and add the address.
2. 5 Tap a **room**. A red dot means it already has notes. The coral ring shows the next room to do.
3. 1 (right picture) Tap the **microphone** and talk. Tap again to stop.
4. 2 The words appear in the box. You can type or correct them.
5. Tap the next room and carry on.
6. 3 At the end tap **Copy for Claude** and paste into the WPS project chat. 4 **Share** sends the notes to another app.

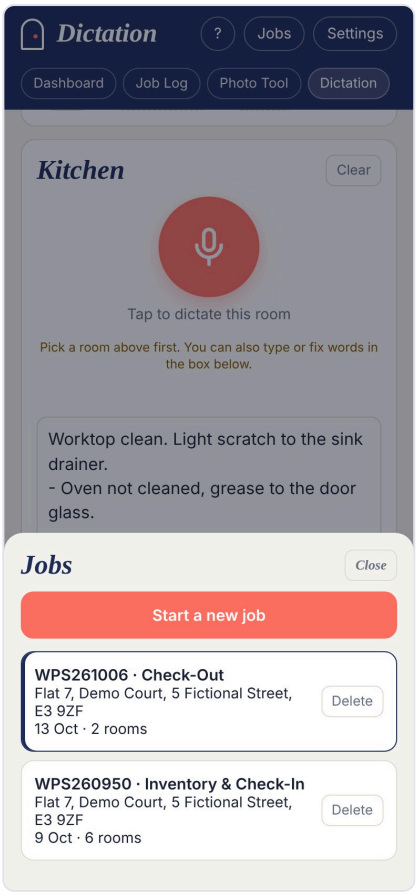

Rooms from the last visit

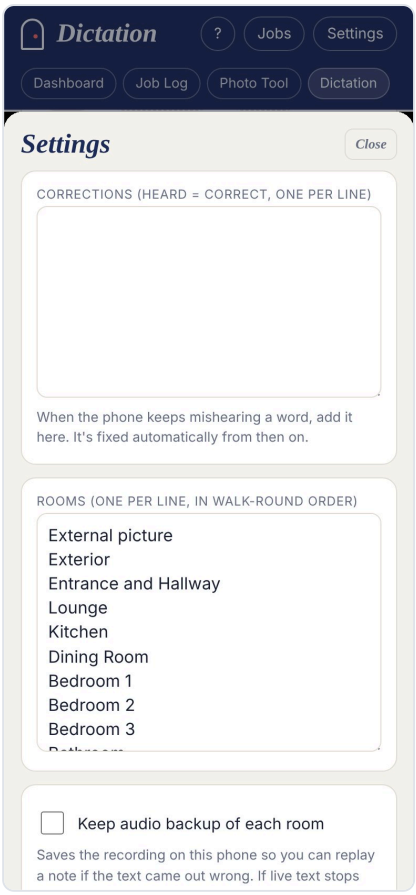

1 Which visit the rooms came from. 2 The next room. 3 More rooms.

When the address (with its flat or house number and postcode) matches a property you've dictated before on that phone, the room buttons are filled in from that visit, in the same order, and a line says which visit it was. A check-out uses the check-in's rooms; a mid-term or schedule of condition uses the latest visit. A new property shows the full room list. **More rooms** adds the full list after them; **+ Other** adds a room. The rooms only change before you start dictating, so nothing you've said is lost.

While talking you can say "full stop", "comma", "question mark", "new line", "new paragraph" or "next item" (starts a new bullet). **Clear** (next to the room name) empties that room's text.

Jobs: switch between dictations or delete old ones.

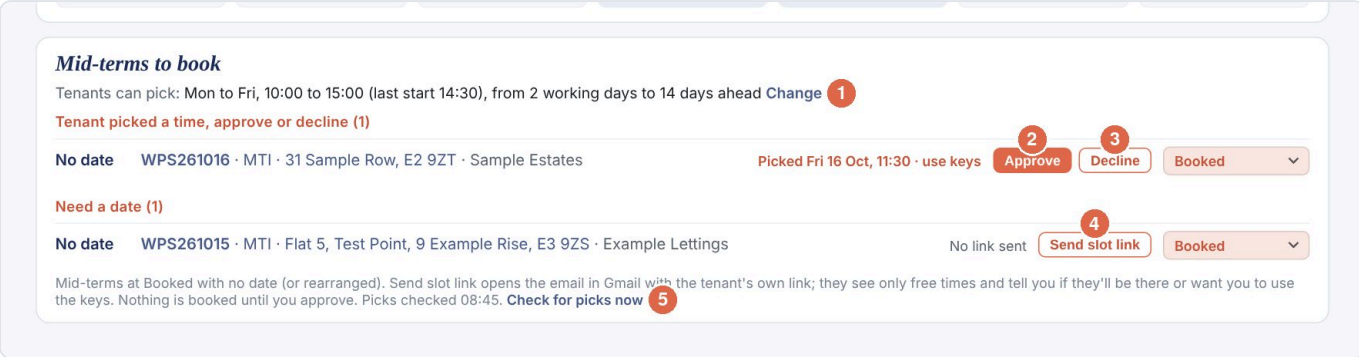

Settings.

- **Corrections:** when the phone keeps mishearing a word, add a line like *skirting bored = skirting board*. It's fixed automatically from then on.
- **Rooms:** the room buttons, one per line, in walk-round order.
- **Keep audio backup:** keeps a recording of each room on the phone, to replay if the text came out wrong. If the live text stops working with this on, switch it off.
- **Export all notes** saves a backup file. Tap **Save settings** when done.

The microphone needs permission the first time. If the phone asks, tap Allow. The live text comes from the phone's own speech recognition, which usually needs a signal.

16. Mid-terms and the tenant slot link

Instead of phoning or emailing back and forth to agree a mid-term time, you send the tenant a link. They see only the times you're free and pick one. You approve it. Nothing is booked without your click.

Mid-terms to book. 1 Change the days and hours. 2 Approve. 3 Decline. 4 Send slot link. 5 Check for picks now.

Where to find it

The **Mid-terms** tile on the Dashboard opens the **Mid-terms to book** panel: every mid-term at Booked with no date, or rearranged, or with a link out. Picks waiting for you come first ("Tenant picked a time, approve or decline"), then "Need a date". Picks also show in Do next. The panel needs Google sign-in: if it says so, click **Save & get latest** in the sidebar.

What each row says

Row says	Buttons
No link sent	**Send slot link**: makes the tenant's own link and opens the email in Gmail, to the tenant emails on the job, CC bowpropman@winkworth.co.uk. Check and send it in Gmail. No tenant email on the job? It asks first, and the email opens with To blank.
Link sent (date), no pick yet	**Send again**: the same email and link again, as a chaser. **Copy link**: copies the link, e.g. for WhatsApp.
Picked (day, time) · will be there / use keys	**Approve** or **Decline**. Rest the mouse on the line to see the tenant's name, phone and note.
Declined, waiting for a new pick	Send again / Copy link, as above.

What the tenant sees

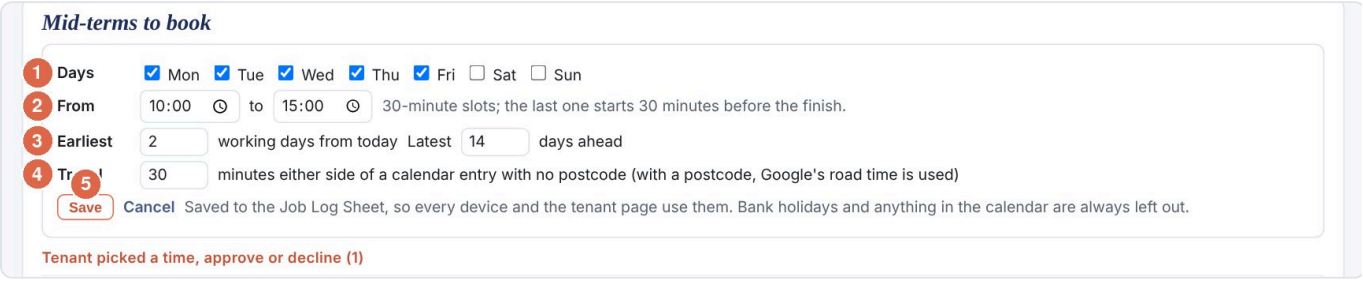

A WPS page with the property address and the free 30-minute times. A time is free when it's inside your days and hours, not a bank holiday, not clashing with anything in the info@ calendar, and leaves time to drive from and to your other visits (Google's road time between postcodes, or the travel buffer when a

calendar entry has no postcode). A time another tenant has picked but you haven't approved is held. They choose a time and say **I will be there**, **Please use the keys** or **Someone else will let you in**, with a name, phone and note if they like. You get a short email at info@ when they pick.

Approve or decline

- Approve asks you to confirm, then sets the job's date and time, adds a line to the notes (the time, how they'll let you in, name, phone, note), adds the phone to the tenants if it's new, puts it in the calendar, and opens the confirmation email in Gmail for you to send. If they said keys, the email says the inspection goes ahead even if nobody is home.
- Decline asks you to confirm, frees the time, and opens an email asking them to pick another time from the same link.
- If something goes wrong, a message says so and nothing on the job is changed.

Settings: which times tenants can pick

1 Days. 2 From and to. 3 How far ahead. 4 Travel buffer. 5 Save.

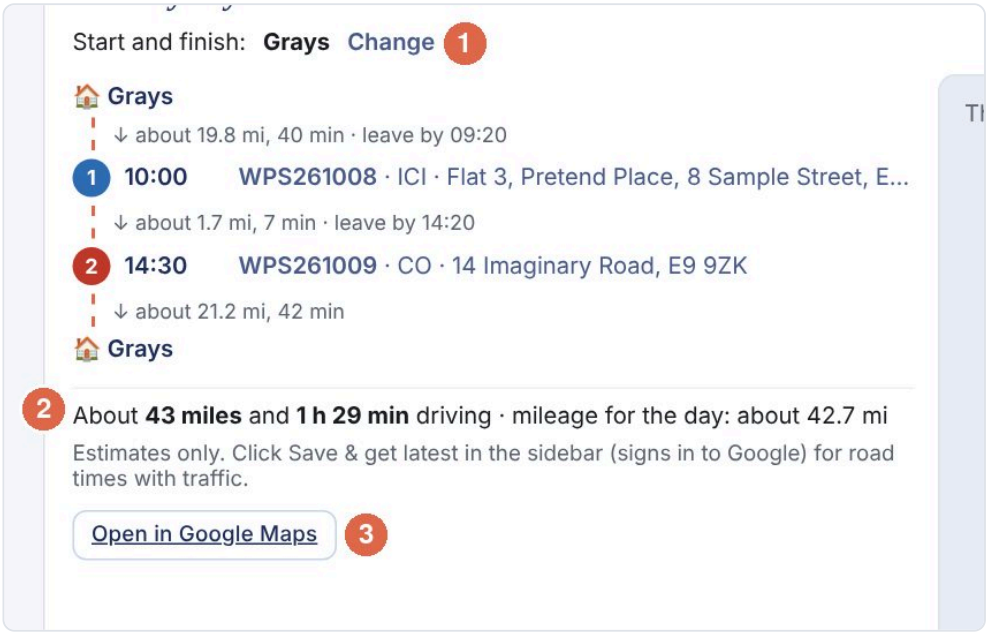

Click Change on the "Tenants can pick" line. Set the days, the hours (30-minute slots; the last one starts 30 minutes before the finish), the earliest (working days from today) and latest (days ahead), and the travel buffer. Click Save. The settings are saved to the Job Log Sheet, so every device and the tenant page use the same ones. Starting settings: Monday to Friday, 10:00 to 15:00, from 2 working days to 14 days ahead, 30 minutes buffer.

Not yet tried with a real tenant. The first time, try it with a test mid-term and your own email (use Copy link, so nothing goes to the agent).

17. Plan my day, Route and Map

Plan my day

Click **Plan my day** in the Today box, or **Route** on a day in Next 7 days. A card opens under the week.

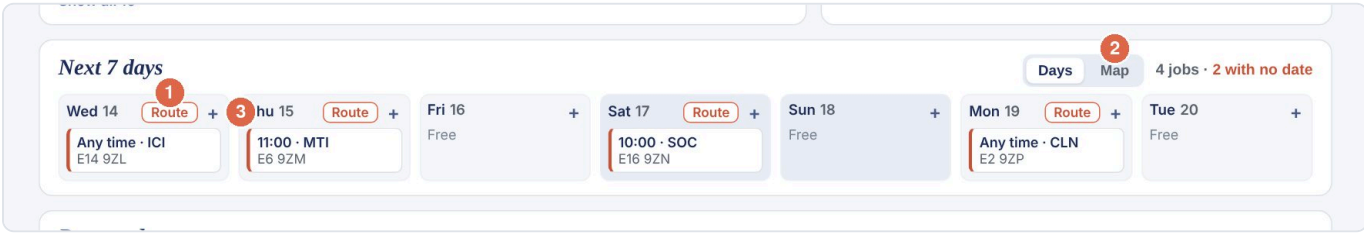

1 Change where you start and finish. 2 Total miles and driving. 3 Open in Google Maps.

- **The order.** Jobs with a time stay in time order. Jobs with no time are put where they add the least driving (a line says so).
- **Each leg** shows miles, drive time and when to leave. "May be late" in red means the time allowed at the job before isn't enough.
- **Time at each job** (including parking and getting in): ICI, CO and SOC 1 h 30, MTI 30 min, clean check 1 h. If the first job has no time, you leave home at 08:30.
- **Road times with traffic.** When you're signed in to Google (Save & get latest), the times come from Google Maps with the traffic expected at that time of day. Otherwise they're straight-line estimates and say "about". A day that has passed gets normal times.
- **Start and finish** is Grays. **Change** lets you type another postcode; blank goes back to Grays. It's kept on that device only.
- The total gives the day's mileage. **Open in Google Maps** gives turn-by-turn directions (first 9 stops). A job with no postcode is listed as "Not placed".
- Pick another day from the box at the top. **Close** puts the card away.

The Map

In the Next 7 days box, click **Map**. Upcoming jobs show as pins coloured by type (ICI blue, CO red, MTI amber, SOC purple, CLN green). Pick **Next 7 days**, **Next 30 days** or **Times to agree** from the box. Click a pin to see the job and open it. Use it to offer a tenant a day when you're already nearby. **Days** goes back to the list.

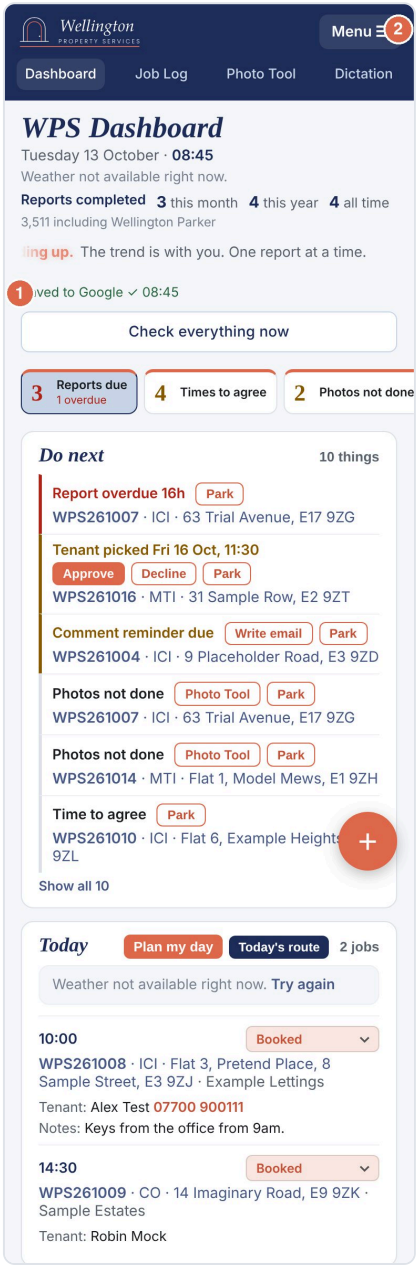

The map comes from OpenStreetMap and the postcode positions from postcodes.io. Only postcodes are sent, never names. It needs the internet; if the map can't load, the list still works.

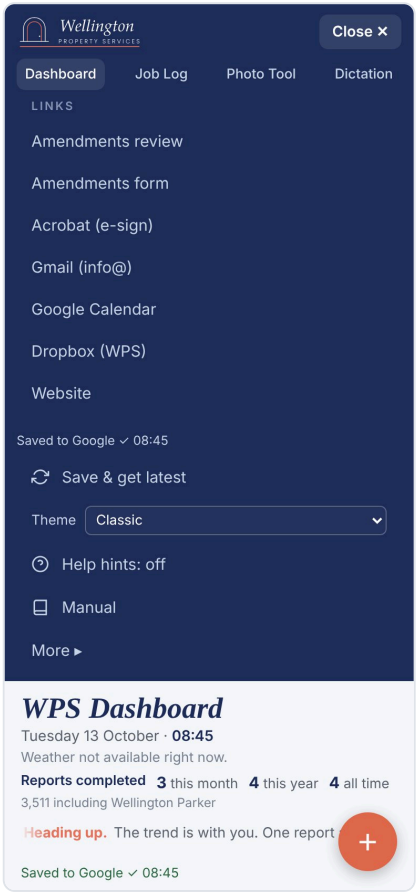

Next 7 days: 1 Route for that day. 2 Map. 3 + adds a job on that day.

18. Using it on your phone

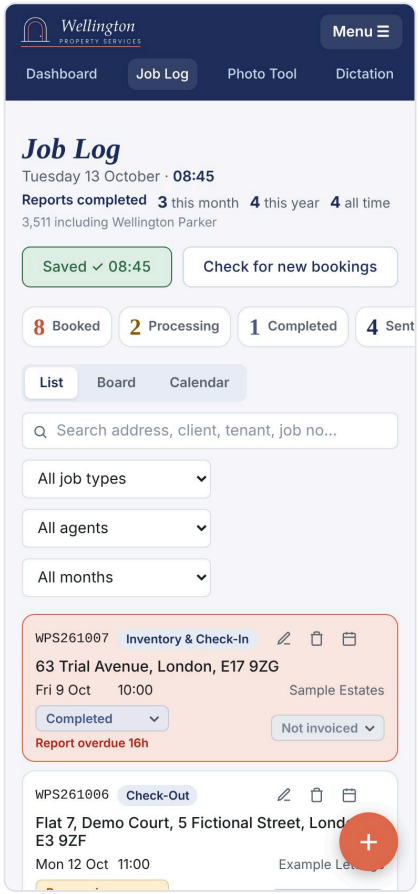

The Dashboard and Job Log work on the phone and tablet. The sidebar folds into a bar at the top with the four pages, the tiles sit in one row you swipe sideways, each job in the Job Log shows as a card, and a round coral + in the corner adds a job. Rearrange, Paid, Mark visited and the job form (tenant rows, Copy to, photo link, Delete job) all work on the phone.

Dashboard on the phone.

Menu ☰ opened.

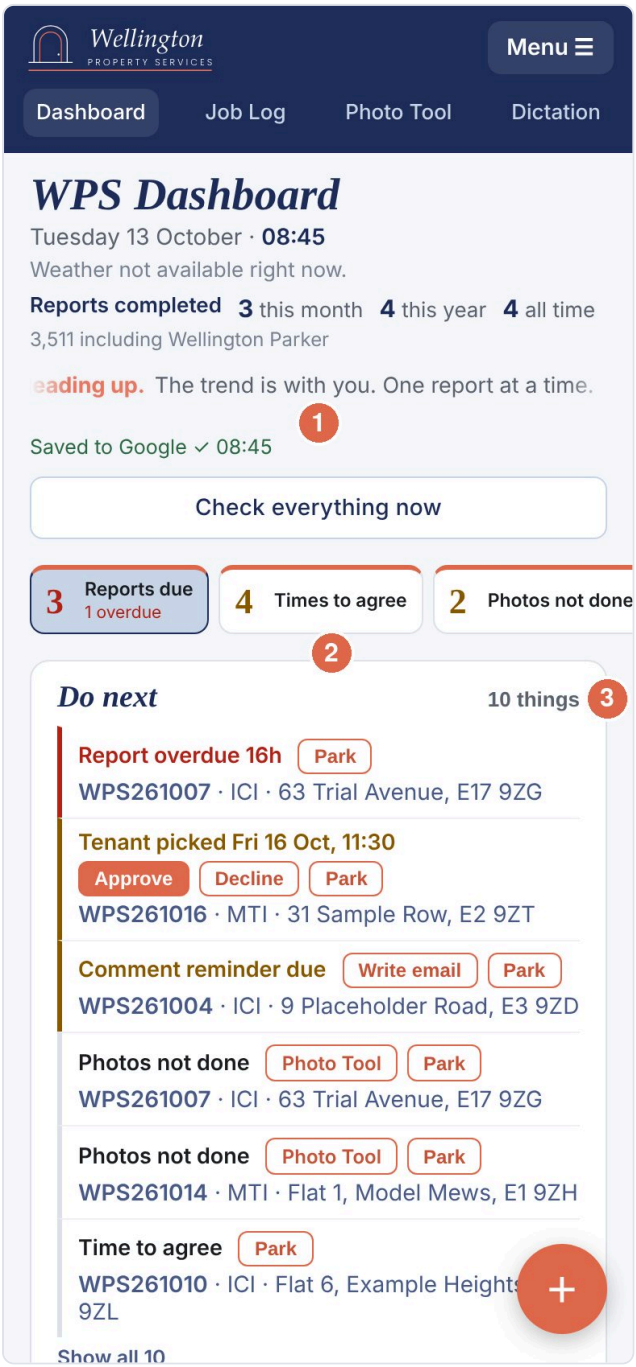

Job Log as cards.

First time on a new phone or tablet

1. Open the web address in Chrome (or Safari on the iPhone).
2. Tap **Load my jobs from Google** and sign in as info@wellingtonparker.com. Your jobs appear.

Every time you open it

- 1 Tap **Save & get latest** (or **Check everything now**, which does that and also checks bookings and amendments). It says **Saving...** then **Saved ✓** with the time. That brings over anything you changed on the PC.
- After you change something on the phone, tap Save & get latest again so the PC gets it.
- If it says **Try again ⚠**, tap it again. The reason shows underneath (often the Google sign-in was closed).
- 2 **Menu ☰** opens the links and tools. **Close ✕** folds them away.
- In the Today box, tap a tenant's phone number to call it.

1 The news line. 2 Tiles: swipe sideways. 3 Do next, with the buttons above each job.

The Photo Tool is meant for the PC (big batches of photos and downloads). Dictation is meant for the phone.

19. The sidebar menu

Pages

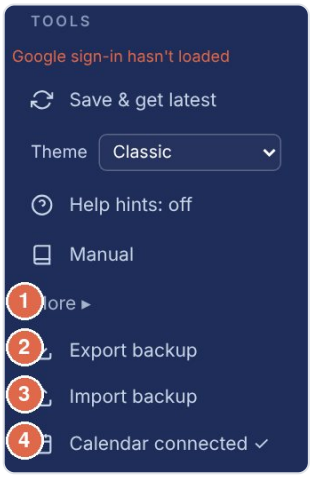

Dashboard	The overview of what needs doing.
Job Log	Every job, list or calendar.
Photo Tool	Photos to zips.
Dictation	Voice notes, for the phone.

LINKS

Shown on the Dashboard. Links to other sites open in a new tab.

Amendments review	Your page for deciding tenant comments.
Amendments form	The form tenants fill in (the link that goes in the Acrobat email).
Acrobat (e-sign)	Send check-in reports for signature.
Gmail (info@)	The info@ inbox.
Google Calendar	The info@ calendar.
Dropbox (WPS)	The WELLINGTON PROPERTY SERVICES folder.
Website	wellington-ps.co.uk
Job Log Sheet (view only, don't edit)	The Google Sheet copy. Shows once this device has saved to Google.

TOOLS

TOOLS with More opened: 1 More. 2 Export backup. 3 Import backup. 4 Calendar.

Saved to Google ✓ (status line)	When the last save to Google happened. "Saving to Google..." while it saves. Coral text (e.g. "Google copy: click Save & get latest" or "Not backed up to Google") means something needs attention: click Save & get latest.
Save & get latest	Saves to Google and loads changes made on other devices. If both changed, it asks which copy to keep.
Theme	Classic, Light or Night colours on this device, for every page (section 5).
Help hints	Hint text on or off (section 1).
Manual	This manual.
Connect Google Calendar	Shows here until the calendar is connected. Then every job you save goes on the info@ calendar, and the button moves under More.

More ▸	Click to open: **Export backup**: saves every job to a file in Downloads. Do it weekly. **Import backup**: replaces this browser's jobs with a backup file. It asks first. Only for emergencies. **Calendar connected ✓**: click to disconnect.

20. What runs by itself, what you do

Runs by itself

- Inbox check at 7:51, 12:51 and 15:51, Monday to Saturday: lines up bookings, changes, cancellations and Tide invoices, flags new amendments, and writes reply drafts in Gmail for you to check (it never sends).
- **Report auto-send** every 15 minutes: check-outs, mid-terms and schedules saved into WPS Ready to send are emailed from reports@, or held with an email to info@ saying why (section 11). The job is set to Sent at the next Check everything now.
- **Check-in signing page**: signing links to each tenant, the agent's copy, one reminder 2 days before the window closes, and the signed copy to everyone once all have signed (section 12).
- Saving the Job Log to Google (PC, within seconds, once signed in).
- Job numbers.
- Report due times and overdue warnings.
- The 7-day comment window countdown on check-ins.
- Deemed agreed, once amendments have been loaded in the last 30 minutes and none are open.
- Calendar entry when you save a job (if connected), and moving or removing it when you rearrange.
- Photo link saved to the job by the Photo Tool (when the job was picked from its list).
- The Dashboard refreshing itself every 3 minutes.
- Four automatic emails from reports@, live since 12 October:
  A "amendments in progress" when the first comments come in for a job;
  B "report signed and completed" when Acrobat's "Signed and Filed" email arrives (checked every 15 minutes);
  C "report deemed agreed" (9am daily);

You do

- Check everything now, then check the To review tray: add, change, mark invoiced or dismiss.
- Check and send the reply drafts the inbox check left in Gmail.
- Add WhatsApp bookings by hand.
- Agree times and add them. For mid-terms: send the slot link, then approve or decline the tenant's pick, and send the confirmation email Gmail opens.
- Mark visits done, or Rearrange the ones that didn't happen, and check and send the Rearrange email.
- Set the stage after each visit, and Completed when a report is written.
- Check client, type, photo link, tenant rows and Copy to before a report goes into WPS Ready to send.
- Save finished reports into WPS Ready to send. Fix and move back anything held.
- Send by hand anything the auto-send doesn't take (other report types, PDFs over 24 MB, more than 6 tenants).
- Set check-ins to Signed when the signed copy arrives.
- Send the 7-day reminder from the dashboard button only when the automatic one hasn't gone.
- Load amendments, and ask Claude to "review amendments" for a job.
- Run the Photo Tool and put the zips on the photos server.
- Copy dictation to Claude.
- Invoice in Tide with the WPS number in the message line; click Paid when paid.
- Save & get latest on the phone. Export backup weekly.

D the 7-day reminder to tenants with 2 days left (9am daily; signing page jobs get their own reminder instead).
A, B and C go to the job's Copy to, or the agent's saved email if none is ticked. D goes to the tenant emails. B skips anyone who signed in Acrobat. For signing page jobs, the signed copy email is B.

- The reports completed counter, milestones and the Performance panel.
- **News headlines** fetched every hour and shown in the news line; a backup address is tried when a news site fails.
- **Mid-term slot page**: shows tenants only free times, holds picked times, and emails info@ when a tenant picks.
- **Plan my day** order, miles and Google road times.

21. If something goes wrong

What you see	What to do
A change Claude made isn't showing on the PC.	Press Ctrl+Shift+R. If it's still the old version, wait up to 10 minutes and try again.
The phone or tablet shows no jobs.	Tap **Load my jobs from Google** and sign in as info@.
Phone doesn't show what you did on the PC.	Tap Save & get latest.
Sidebar says "Google copy: click Save & get latest".	This tab isn't signed in to Google yet, so changes are only in this browser. Click Save & get latest. The calendar catches up on the next save after that.
"The Job Log was changed both here and on another device since the last sync."	OK loads the Google copy (this browser's unsynced changes are lost). Cancel keeps this browser's copy. If unsure, choose OK and redo your last change.
"Google sign-in pop-up was blocked"	Allow pop-ups for the site (icon at the right of Chrome's address bar), then try again.
"Not saved to Google — will retry on next change"	Usually the internet dropped. Click Save & get latest when you're back online.
"Couldn't update the calendar for ..." (with Google's reason)	The job saved, the calendar didn't. Check the event in Google Calendar, then save the job again.
"Couldn't remove the calendar event for ..."	Delete that event in Google Calendar by hand.
Amendments or New bookings tile shows "–".	Normal until you load them. Click Check everything now.
"Deemed agreed (pending)" stays on a check-in.	The amendments haven't been loaded in the last 30 minutes. Click Check everything now.
Invoice sent card: "No WPS job number in the email" / "Couldn't find ..." / "is on 2 jobs"	Dismiss it and set the invoice on the right job by hand (Invoice and Invoice number boxes). Next time, put the WPS number in the Tide message line.
"Google refused Gmail access (403)"	Tell Claude. It's a Google set-up issue, not your data.
Lots of reports overdue.	Set sent reports to Sent or beyond. Use Mark visited for visits still at Booked.
Picked the wrong stage or clicked Paid by mistake.	Click Undo on the bar (8 seconds). Too late? Pick the old stage in the box.
"Report held, not sent" email.	Read the reason, fix it, move the PDF from Held back into WPS Ready to send (section 11).
A report was emailed but the job isn't at Sent.	Click Check everything now. If a Report sent card shows a reason, set the stage by hand and Dismiss the card.

A tenant says their signing link doesn't work.	The link stops once they've signed, or when a RESEND starts a new round. Check the Signings tab and send the newest email again if needed.
Closing a job asks "You've changed ... but not saved it".	OK throws the changes away. Cancel keeps you in the form so you can Save.
Claude can't click or read the Dashboard in Chrome ("Cannot access a chrome-extension:// URL...").	The LastPass extension blocks Claude. Switch LastPass off at chrome://extensions while Claude works, then back on.
Photo Tool: "Can't see your Job Log jobs"	Open it from the sidebar in the same Chrome as the Job Log. You can still type job numbers by hand, then paste the link into the job form.
Photo Tool split a visit wrongly.	Merge with job above / Start a new job from here (section 14), or change the gap in Settings.
Photo Tool zip downloaded with a random name.	Fixed 18 Oct (pull request #29). Press Ctrl+Shift+R to load the fixed page. Rename any older zip by hand to its WPS name.
Photos had "no date taken inside".	They're HEIC or edited copies. Check the split. Set the iPhone to Most Compatible.
Dictation microphone does nothing.	Allow the microphone when asked. Check signal. Try switching off audio backup in Settings.
Deleted a job by mistake.	Press Undo on the bar that shows straight after (a few seconds). Missed it? Re-add it, or ask Claude to help restore it from a backup.
Mid-terms panel: "Click Save & get latest in the sidebar to see slot links and tenants' picks."	Click Save & get latest (it signs you in to Google), then the Mid-terms tile again.
"Couldn't make the link" / "Couldn't approve" / "Couldn't decline"	Nothing on the job changed. Click Save & get latest and try again. If it keeps happening, tell Claude.
A tenant picked a time you can't do.	Click Decline. They get the email to pick again from the same link.
Plan my day says "about" or "Estimates only".	You're not signed in to Google. Click Save & get latest; the road times fill in by themselves.
"Couldn't get Google road times ..." in Plan my day	The estimates still show. Try again later. If it keeps happening, tell Claude.
"The map couldn't load."	No internet, or the map site is down. The list still works.
A job is missing from Do next.	It may be parked: look at the Parked line at the bottom of Do next and click Un-park.
"News: ... not loading since ..." under the news line.	Nothing to do. The script keeps trying the backup address. If it stays for days, tell Claude.
The news line shows only messages.	No new headlines yet, or the news couldn't be fetched. It tries again every 30 minutes.

22. Known gaps

Things that aren't finished or haven't been tried in real use yet, as of 20 October 2026:

- **The tenant slot link** hasn't been tried end to end with a real tenant and the real calendar yet.
- **Plan my day** on the iPhone: not reported back yet.
- **Syncing by itself needs the device key.** With a key set (More > Device key) the Dashboard saves and loads every few minutes; on a device without one, tap Save & get latest.
- **Signed is automatic only for the WPS signing page** (when every signer has signed, with the device key). Old Acrobat sends are still set by hand.
- **The first real auto-sent report and the first real check-in on the signing page** haven't been checked end to end yet.
- **The auto-send doesn't check the photo link opens**; it uses the link on the job or page 1 of the report.
- **WhatsApp bookings** can't be seen by the inbox check.
- **Rearrange emails** haven't yet been checked in a real Gmail window: the From line (should be hello@), the signature, and the date box showing dd/mm/yyyy. Check them on the next real rearrange.
- **After a rearrange with no date**, setting the date later leaves the note saying "New date to agree". Edit the note if it matters.
- **Apply change** copies Claude's summary into the job notes (e.g. "needs moving"), which reads out of date once applied.
- **A tab not signed in to Google** saves only in the browser; the calendar catches up on the next save after sign-in.
- **The calendar error message** hasn't been seen on a real failure yet.
- **"Changed both here and on another device"** was seen once on 13 October; which device caused it isn't known.
- **The Photo Tool and Dictation don't read the Google Sheet.** The Photo Tool sees jobs only in the same Chrome as the Job Log, and its list only offers jobs dated 21 days before to 2 days after the photos. Dictation reads the Job Log on the same phone only. Rooms from the last visit only know visits dictated on that phone.
- **Photo links** still use wellingtonparker.com (they work). The new photos.wellington-ps.co.uk address isn't set up.
- **Extract job details** only reads a clean address line. When the address is buried in a sentence, type it in.
- If two devices each add a new job before syncing and pick the same number, the device that saves second moves its own new job to the next free number by itself and shows a message (old number and new number). The job saved first keeps its number, and the change is in the job's Change history. A number typed by hand that clashes is still only flagged in Do next ("Two jobs share the number").
- **Day-before reminders** start only once the VisitRemind script file is pasted and switched on (vrStart). Not yet tried with a real tenant.
- **Mileage** is only counted for days you opened Plan my day with Google road times.

- The iPhone can clear Dictation's saved notes if it isn't opened for about 7 days. Copy notes to Claude the same day.

If this manual and the tools ever disagree, the tools are right. Ask Claude to update the manual.

23. New on 20 October

What	Where	How it works
Tile lists	Dashboard tiles	Clicking a tile now opens its list straight under the tiles (it used to be at the bottom of the page). Click the same tile again, or **Close**, to shut it. Price list and System health open in the same place.
Winkworth check-outs	Times to agree	A Winkworth check-out with a date no longer needs a time agreed. It shows on its day as **Any time**. With no date it still shows as No date yet.
Keys	Job form, Today, Plan my day, calendar	Set **Keys from** and **Keys back to** with a short note (e.g. Winkworth, 429 Roman Road). Today, Plan my day and the calendar event show "collect from ... back to ...". After the visit, keys not marked back show in Do next: press **Keys returned**.
Day-before reminder	Script, job form	About 17:00 the script emails the tenants of tomorrow's booked jobs that have a time, from hello@. Mid-terms copy Riley. Logged in the Visit reminders tab. Tick **No day-before reminder** on a job to skip it.
Price list	Sidebar > Price list	Fees per agent, job type and bedrooms, plus each extra area, with separate **Flats** and **Houses** tabs (a house uses the house price when the job's Property type is House; a blank house box falls back to the flat price). The job form shows the expected fee. To invoice and Awaiting payment add up using the price list where Tide gave no amount. A Tide invoice that doesn't match shows in Do next.
Congestion and parking	Job form, Price list	Tick **In the congestion zone** on a central London job (the form suggests it from the postcode) and put any parking you'll charge in **Parking charged extra**. Set the congestion amount per agent on the Price list. Both are added to the expected fee; Today shows "Congestion zone: pay the charge".
Money by month	Performance tile	Invoiced and paid for the last 6 months.
Report ageing	Reports due	Lines add "visited N days ago" once a visit is 2 or more days old.
This property before	Job form	Every other job at the same property, with Open and Photos.
Next mid-term due	Mid-terms tile	Properties whose last check-in or mid-term was about 6 months ago. **New MTI** starts a job with the address, agent, tenants and keys filled in. Check against Riley's list first.
Business mileage	Performance tile	Plan my day's Google road miles for days you've worked are kept. Shows this month and the tax year from 6 April. **Copy mileage list** gives a list to paste for the accountant.
Search	Job Log	Now also searches notes, keys notes and copy-to emails.
Export spreadsheet	Sidebar > More	Every job as a CSV file for Excel or Google Sheets.

Undo delete	After Delete job	An Undo bar shows for a few seconds. The job comes back with a new calendar event.
Change history	Job form	A dated line for each change to a job (last 40), for the record if a report is disputed.
