WPS Tools Manual

Dashboard · Job Log · Photo Tool · Dictation · the sidebar menu

A step-by-step guide for Wellington Property Services, written for someone opening these tools for the first time.

What's inside

1. Start here
2. Your day, step by step
3. The Dashboard
4. Job stages (the coloured pills)
5. The Job Log
6. Adding and editing a job
7. New bookings from your inbox
8. Comment windows, reminders and amendments
9. The Photo Tool
10. Dictation
11. Using it on your phone
12. The sidebar menu
13. What runs by itself, what you do
14. If something looks wrong
15. Known gaps

Version of 12 October 2026. Screenshots are taken with made-up jobs, addresses and names (Example Lettings, Sample Estates, postcodes ending ZZ and so on), so no real tenant details appear. The lettering in the screenshots is slightly different from your screen. The buttons and layout are the same.

1. Start here

The four tools

Tool	What it's for	How to open it
Dashboard	Your home page. One screen showing what needs doing today: reports due, new bookings, comment windows, invoices.	The web address below. It always opens here.
Job Log	Every job you've booked, as a list or a calendar. Where you add, edit and move jobs along.	`Job Log` in the sidebar.
Photo Tool	Turns a day's site photos into renamed, watermarked zip files, one per job, and saves the photo link to the job.	`Photo Tool` in the sidebar. Use it on the PC.
Dictation	Talk your notes into the phone room by room, then copy them to Claude to write up.	`Dictation` under LINKS in the sidebar. Use it on the phone.

Opening the tools

All four live at one web address. Bookmark it in Chrome on the PC and on the phone:

https://8kj2j8jv85-maker.github.io/wps-job-log/

When Google asks you to sign in, always choose **info@wellingtonparker.com**. That's the account that holds the Job Log Sheet, the calendar and the inbox the tools read.

Where your jobs are kept

Your jobs are saved in two places at once:

- **In the browser** on each device, so the pages open fast and work without a signal.
- **In the Google Sheet "WPS Job Log"** on info@. This is the master copy that keeps the PC and the phone in step.

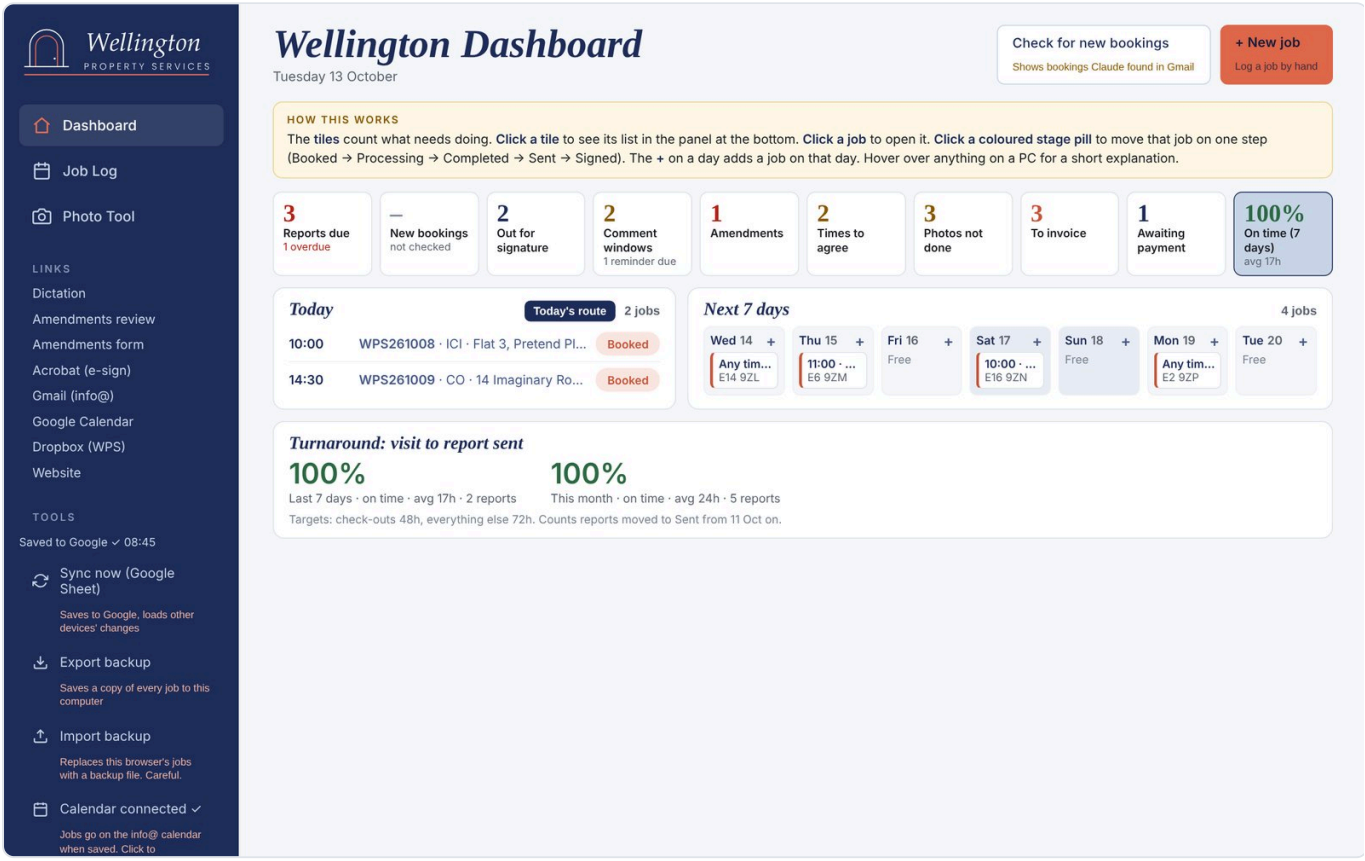

On the PC every change saves to Google by itself within a few seconds. The sidebar then shows `Saved to Google ✓ 08:45` (with the time). On the phone, tap `Sync now` each time you open it (see section 11).

> **Don't edit the Google Sheet by hand.** Make every change in the Job Log. The Sheet is written by the Job Log and will be overwritten.

Help hints

There are two kinds of help built into the pages:

- **Hover hints.** On the PC, rest the mouse on any button, tile or pill for a second and a short explanation pops up. These are always on.
- **Help hints switch.** In the sidebar under TOOLS, `Help hints: on ✓` shows a yellow "How this works" box at the top of each page and a short line of text under the main buttons. That works on the phone too, where there's no hovering. Click it again to switch the hints off once you know your way round. The switch applies to the Dashboard, Job Log, Photo Tool and Dictation together.

The Dashboard with Help hints switched on: a yellow box explains the page and short lines sit under the buttons.

The `Manual` link just under the switch opens this manual.

2. Your day, step by step

This is the normal rhythm. Each step is explained in more detail later in the manual.

Morning

1. Open the **Dashboard**. Look at the tiles across the top. Red numbers are the urgent ones.
2. Click **Check for new bookings**. Claude checks the inbox at 7:51, 12:51 and 15:51 (Monday to Saturday) and lines up anything that looks like a booking, a change or a cancellation. Go through each card and add, change or dismiss it (section 7).
3. Click the **Times to agree** tile. These are booked jobs with no time yet. Contact the tenant and add the time to the job.
4. In the **Today** box, click **Today's route** to open Google Maps with today's jobs as stops, in time order.

After each visit

5. Click the job's **Booked** pill once, so it moves to **Processing**. That starts the report clock: check-outs are due 48 hours later, everything else 72 hours.
6. On the phone, use **Dictation** as you walk round (section 10). Back at the PC, run the day's photos through the **Photo Tool** (section 9).

When a report is finished and sent

7. Move the pill to **Completed** when the report is written, then to **Sent** the day it goes out. For an inventory and check-in, "Sent" means sent for signature in Acrobat (with the comments form link in the email). The 7-day comment window starts the moment you click Sent.
8. Keep an eye on the **Comment windows** and **Amendments** tiles for check-ins (section 8). When Acrobat's signed copy comes back, move the pill to **Signed**.

Money

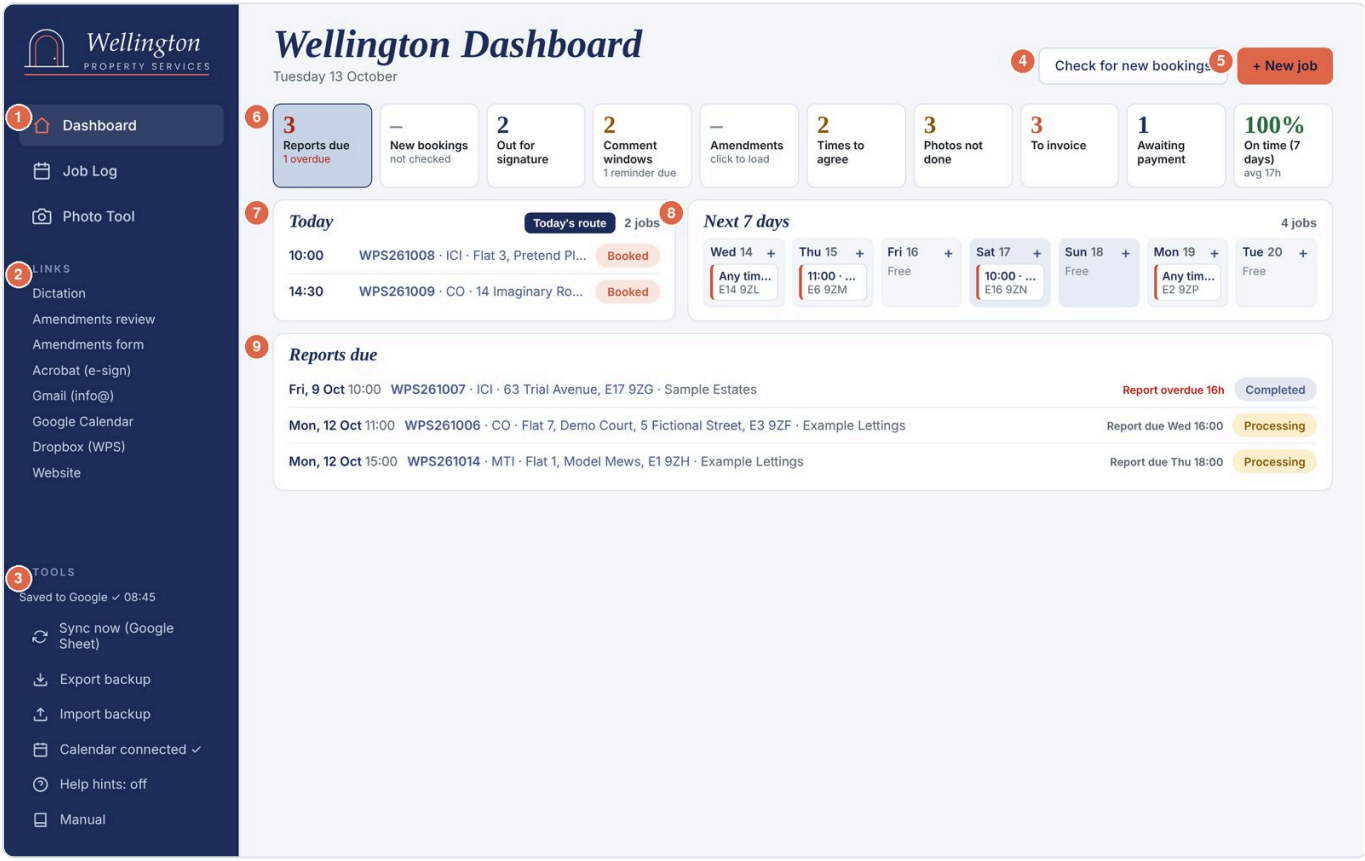

9. The **To invoice** tile lists reports sent but not invoiced. Raise the invoice in Tide, then click the job's invoice pill once (it changes to **Invoiced**) and type the invoice number into the job. When the money arrives, click the pill again for **Paid**.

Once a week

10. Click **Export backup** in the sidebar to save a copy of every job to the PC. Glance at the **On time** tile to see how quickly reports are going out.

3. The Dashboard

The Dashboard is the first page you see. It fits on one screen of the PC.

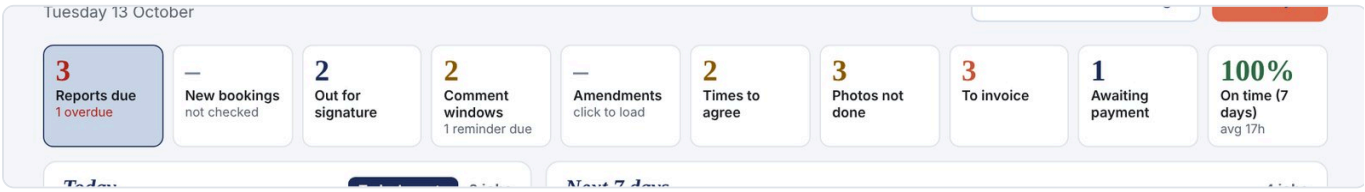

The Dashboard. The numbers match the list below.

1	**Pages.** Dashboard, Job Log and Photo Tool. The one you're on is highlighted.
2	**LINKS.** One-click shortcuts to Dictation, the amendments pages, Acrobat, Gmail, Calendar, Dropbox and the website (section 12).
3	**TOOLS.** Saving to Google, backups, the calendar connection, Help hints and this manual (section 12).
4	**Check for new bookings.** Shows the bookings Claude found in your inbox, for you to check (section 7).
5	**+ New job.** Log a job by hand (section 6).
6	**Tiles.** Each one counts something that needs doing. Click a tile to show its list in box 9.
7	**Today.** Today's jobs in time order, with `Today's route` for Google Maps.
8	**Next 7 days.** The coming week, a day per column. Click a job to open it. Click **+** on a day to add a job on that date. "Any time" means no time agreed yet.
9	**The list panel.** Shows the list for whichever tile is selected (highlighted in blue). It shows up to 7 lines, then `Show all`.

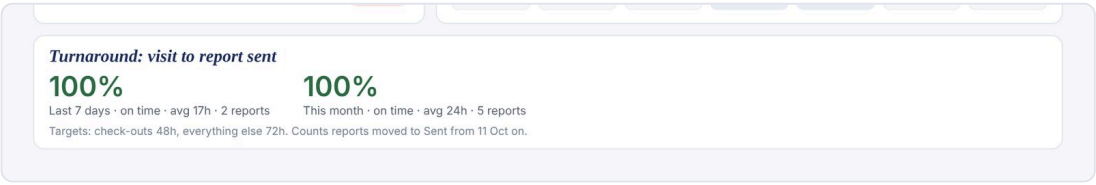

Everywhere on the Dashboard: click a **job** (the blue job number and address) to open it. Click a **coloured stage pill** to move that job on one step.

The ten tiles

Tile	What it counts	What to do
Reports due	Jobs you've visited whose report hasn't been sent, soonest first. Red line underneath = how many are overdue.	Write the report, then move the pill on.
New bookings	Bookings Claude found in Gmail that you haven't handled. Shows "–" until you click Check for new bookings.	Check for new bookings (section 7).
Out for signature	Inventory and check-in reports at Sent, waiting for signatures in Acrobat.	Move to Signed when the signed copy arrives.
Comment windows	The 7-day comment window on each check-in report you've sent. The line underneath shows reminders due.	Section 8.
Amendments	Jobs with tenant comments still open. Shows "–" until loaded.	Click the tile, then **Load amendments**.
Times to agree	Booked jobs with no time set.	Agree a time, open the job, add it.
Photos not done	Jobs visited in the last 30 days, report not sent, no photo link saved.	Run the Photo Tool for them.
To invoice	Report sent, not invoiced yet.	Invoice in Tide, click the invoice pill.
Awaiting payment	Invoiced, not paid yet. Shows the invoice number.	Click the invoice pill again when paid.
On time (7 days)	The share of reports sent within target over the last week, and the average hours from visit to sent. Targets: check-outs 48h, everything else 72h. Green 80% and over, amber 50–79%, red below.	Click for the month's figure too.

Number colours: red = late or needs action now, amber = worth doing soon, navy = information, grey = nothing there.

The On time tile's panel: last 7 days and this month.

4. Job stages (the coloured pills)

Every job has a stage, shown as a coloured pill. **Clicking the pill moves the job one step forward.** It never goes backwards from a click.

Stage	Means	Move it here when...
Booked	In the diary, not visited yet.	Automatic for new jobs.
Processing	Visited, report being written. The report due time is counted from when you click this.	You've done the visit.
Completed	Report written, not sent yet.	The report is finished.
Sent	Report has gone out. The sent date is recorded. For check-ins, the 7-day comment window starts. The job also joins "To invoice".	The day you send it (or send it for signature).
Signed	Check-in report signed.	Acrobat's signed copy comes back.
Deemed agreed	Check-in window closed with no signature and no open comments.	You don't: it's set by itself (section 8).
Archived	Finished and filed. Drops off the Dashboard lists.	The job is fully done.

Clicking goes Booked → Processing → Completed → Sent → Signed → Archived. A Deemed agreed job goes to Archived.

Check-outs, mid-terms, schedules and clean checks aren't signed. Once they're sent and invoiced, click the pill twice (Signed, then Archived), or open the job and set Status to Archived.

Clicked one step too far? Open the job (click its address), change the **Status** box back to the right stage and click `Save changes`. Moving a job back before Sent clears its sent date.

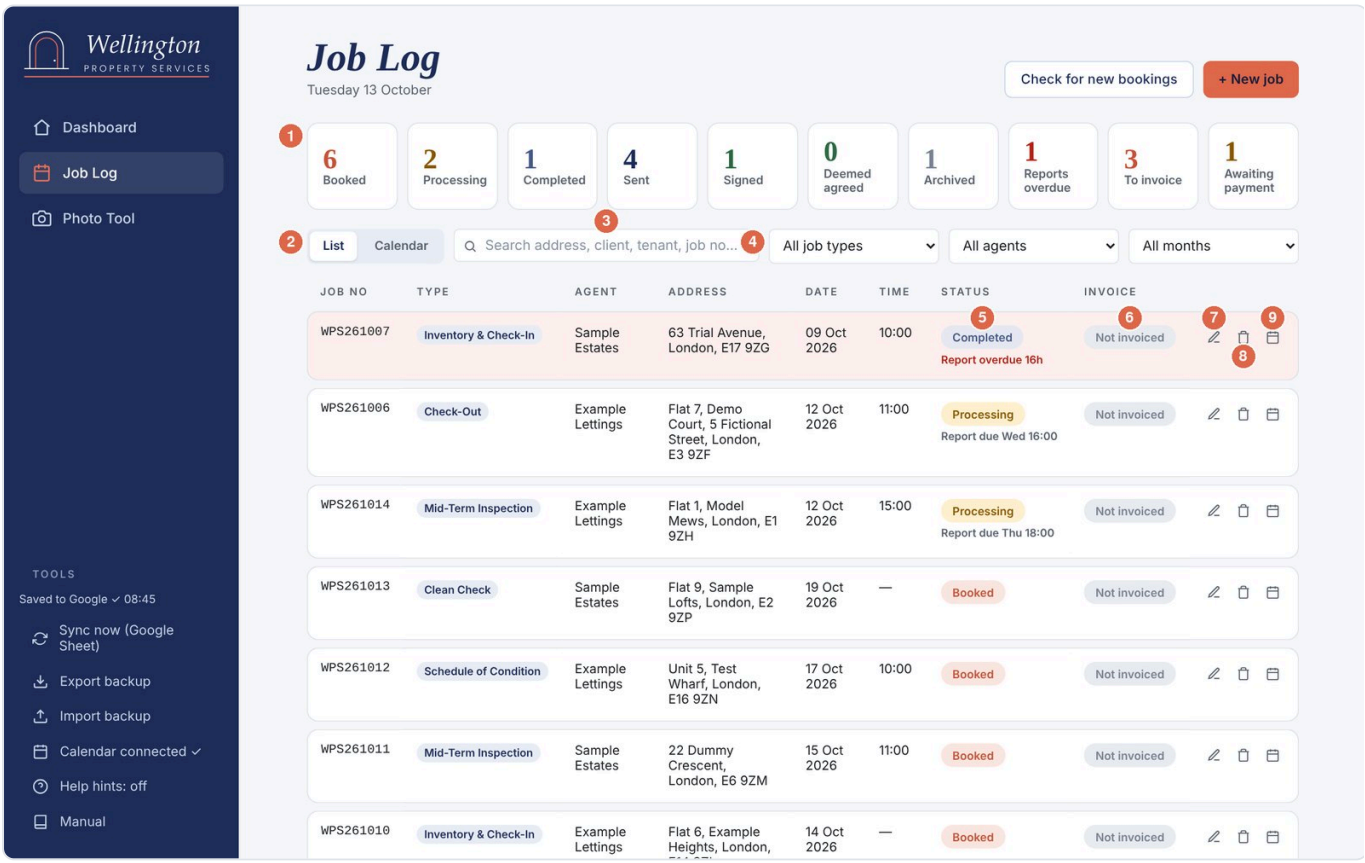

Report due and overdue

Once a job is visited (Processing, or Booked with the visit time passed), it gets a due time: **48 hours for check-outs, 72 hours for everything else**. You'll see "Report due Wed 16:00" under the pill, amber when it's within 6 hours, and red "Report overdue 16h" when late. Overdue rows in the Job Log are shaded red.

If lots of jobs show as overdue, it's usually because reports were sent but the pills weren't moved along. Move each one to Sent (or further) and the count drops.

5. The Job Log

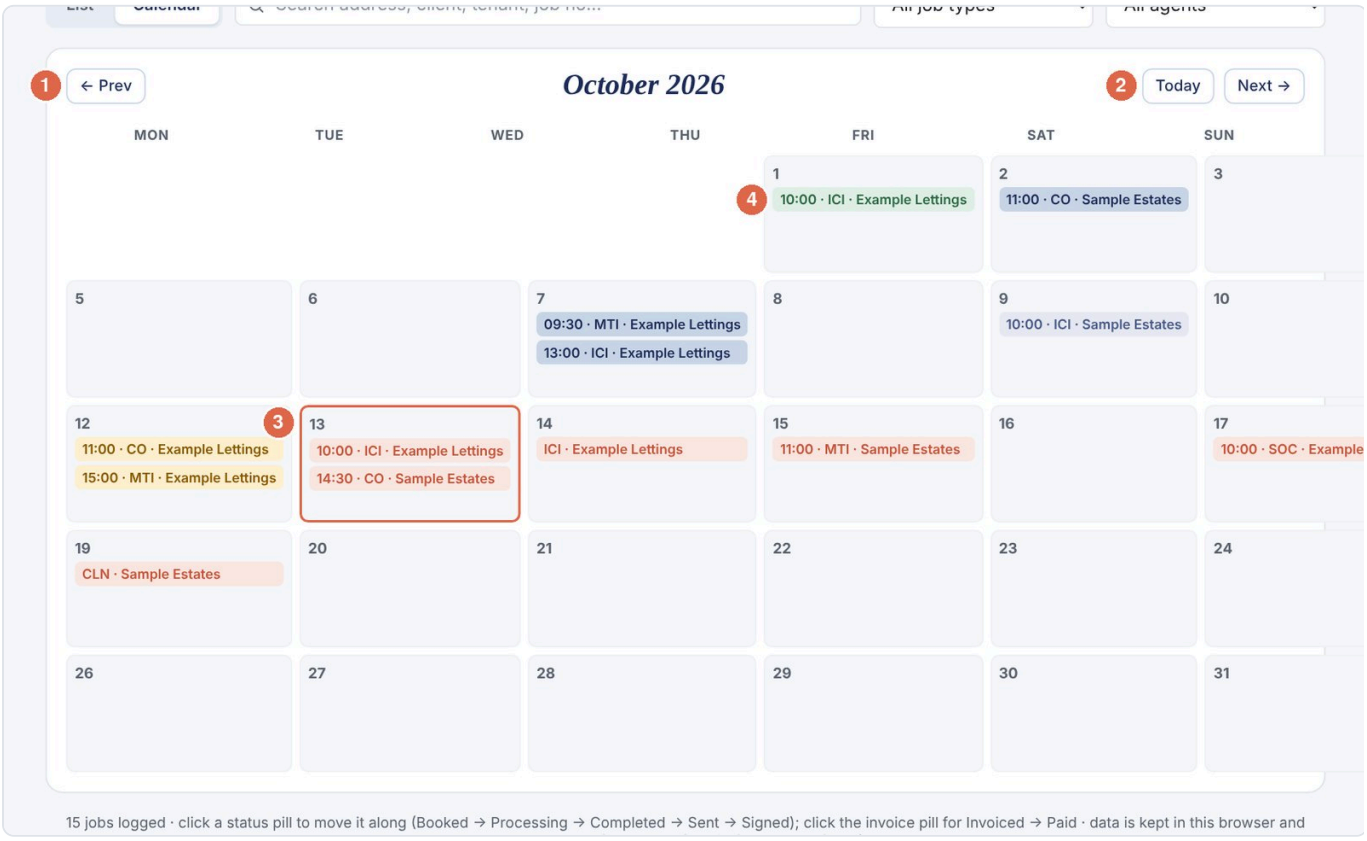

Click **Job Log** in the sidebar. It shows every job, with the ones needing a report first, then the newest.

The Job Log as a list.

1	**Count cards.** How many jobs at each stage, plus overdue, to invoice and awaiting payment. **Click a card** to show only those jobs. Click it again to show all.
2	**List / Calendar.** Switch between the list and a month calendar.
3	**Search.** Type part of an address, postcode, agent, tenant name or email, job number or invoice number.
4	**Filters.** Show one job type, one agent or one month.
5	**Stage pill.** Click to move the job on one step. The line underneath says when the report is due.
6	**Invoice pill.** Click for Not invoiced → Invoiced → Paid (a fourth click goes back to Not invoiced). It shows "To invoice" in coral once the report is sent.
7	**Pencil.** Open and edit the job.
8	**Bin.** Delete the job. It asks first. **There's no undo**, and it also removes the calendar entry.
9	**Calendar icon** (only when the calendar is connected). Puts the job on the info@ calendar, or updates it. Blue = already on the calendar.

Calendar view

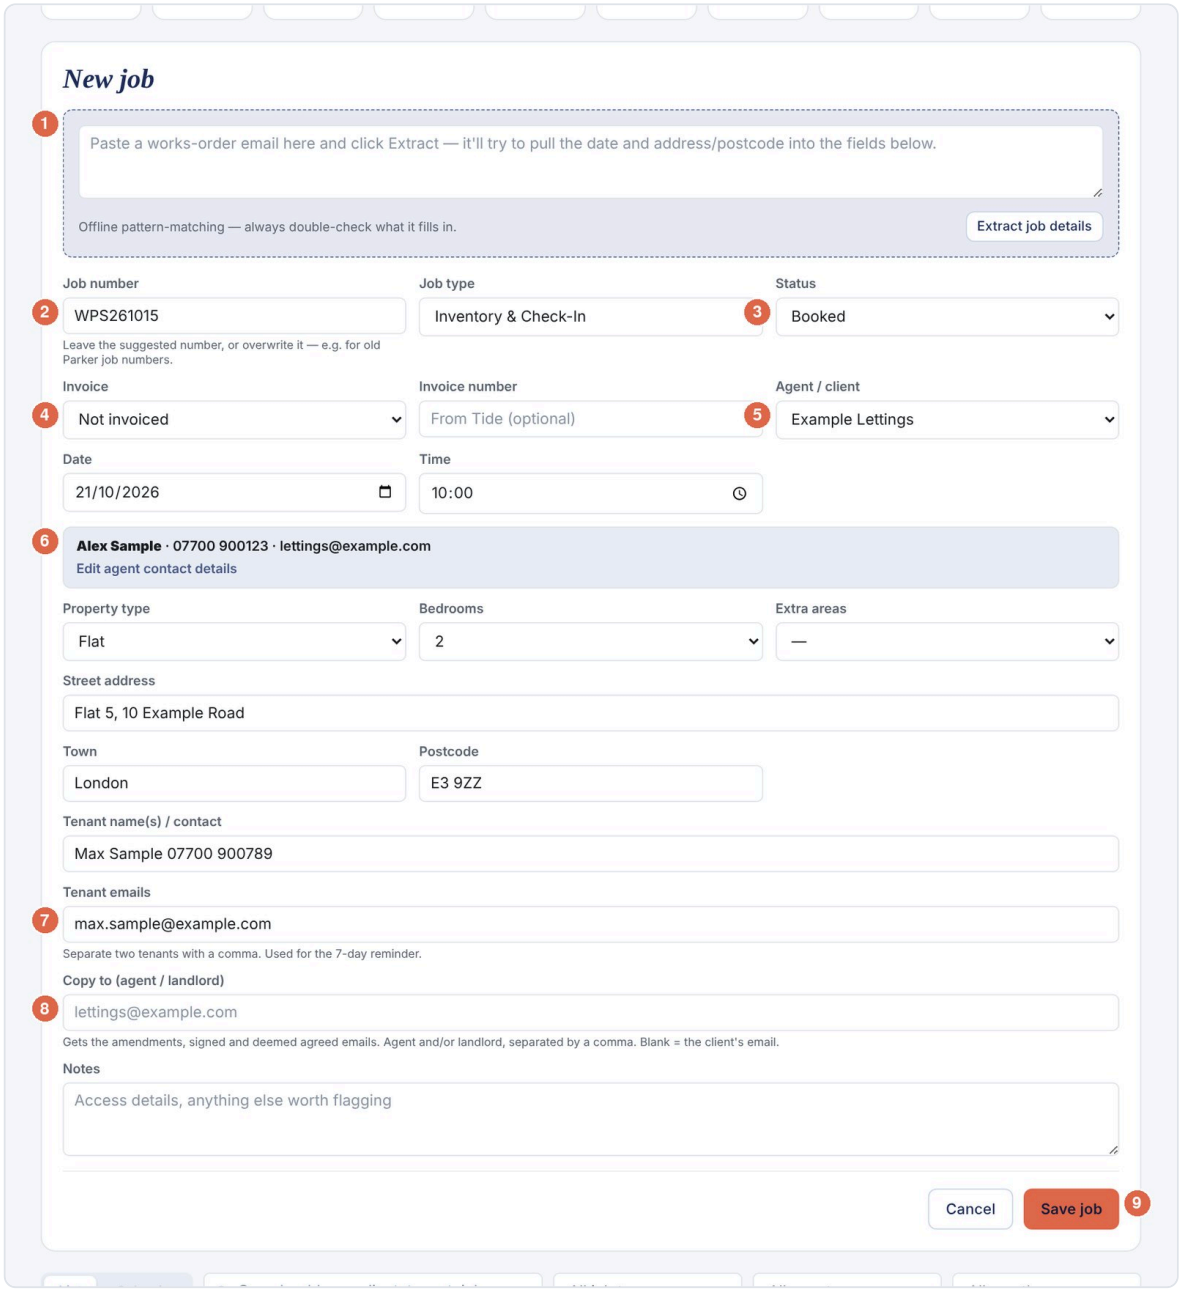

The month calendar. Each job is coloured by its stage.

- 1 **Prev / Next** change month. 2 **Today** jumps back to this month.
- 3 Today has a coral border. **Click an empty part of any day** to add a job on that date.
- 4 **Click a job** to open it. Hover over it on the PC to see the full address.

6. Adding and editing a job

Click **+ New job** (top right of the Dashboard or Job Log), the **+** on a day, or an empty calendar day. To change a job, click its address or the pencil. The same form opens either way.

A new job, filled in from a pasted email.

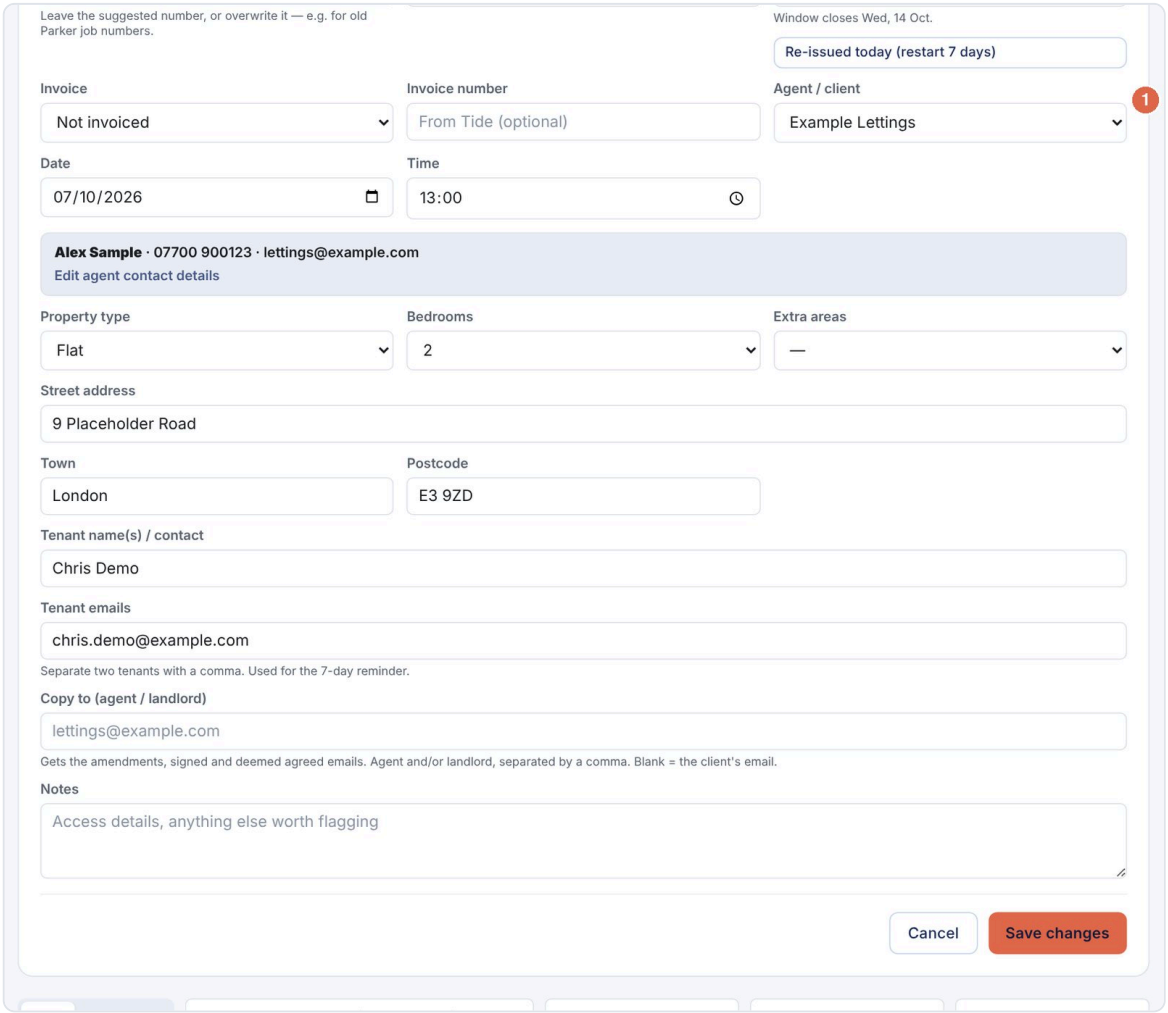

1	**Paste box.** Paste the agent's booking email and click **Extract job details**. It fills in the date, address, postcode and job type it can find. It works best when the address and postcode sit on their own line. **Always check what it fills in.**
2	**Job number.** Fills itself: WPS + year + month + number, e.g. WPS261015. Numbers are never reused, even after a delete. You can type over it (e.g. for an old Parker number).
3	**Status.** The stage. Change it here to move a job backwards.
4	**Invoice** and invoice number (from Tide).

5	**Agent / client.** Pick from the list. Choose **+ Add new agent...** at the bottom to add one.
6	**Agent contact.** The saved contact for that agent. Click **Edit agent contact details** to change it. It's saved for every job with that agent.
7	**Tenant emails.** Separate two tenants with a comma. Used for the 7-day reminder on check-ins. Fill it in on every check-in.
8	**Copy to (agent / landlord).** Who gets the "amendments in progress", "signed" and "deemed agreed" emails. Several addresses, separated by commas. Left blank, the agent's saved email is used.
9	**Save job** (or **Save changes**). If the calendar is connected, the job goes on the info@ calendar too. **Cancel** closes without saving.

The other boxes: date and time of the visit, property type, bedrooms, extra areas, street address, town, postcode, tenant names and phone (who to contact for access), and notes (access details, key collection and so on).

Re-issuing a check-in report after amendments

When you've corrected a check-in report after tenant comments and sent it again, open the job. Under Status you'll see when its window closes and a button:

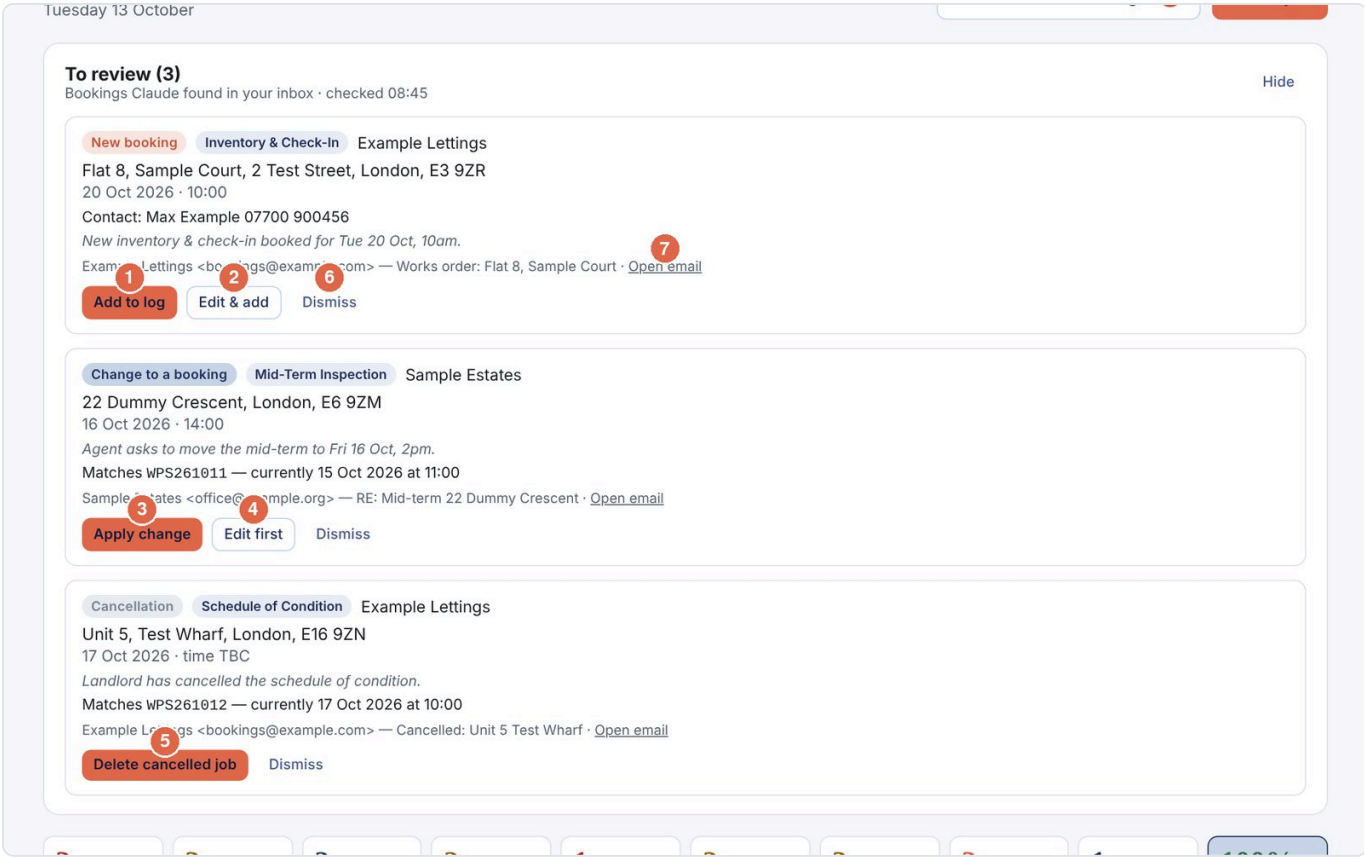

1 Re-issued today (restart 7 days)

Click it the day you re-send. The job goes back to Sent and a new 7-day window starts, covering the changed items only. The reminder wording changes to match.

7. New bookings from your inbox

Three times a day (7:51, 12:51 and 15:51, Monday to Saturday) Claude reads the info@ inbox and lines up anything that looks like a new booking, a change to a booking, or a cancellation. **Nothing goes into the Job Log until you say.**

Click **Check for new bookings**. The first time each session, Google may ask you to sign in (choose info@). A small coral number on the button shows how many are waiting. The cards appear in a **To review** tray:

The To review tray: a new booking, a change and a cancellation.

Card	Buttons
New booking (coral label)	1 **Add to log** adds it straight away with the next job number. 2 **Edit & add** opens it in the job form first, so you can check or add details, then Save job. If it says "Possible duplicate of WPS...", it looks like a job you already have. Check before adding.
Change to a booking (blue label)	It shows which job it matches and the current date and time. 3 **Apply change** updates the date and time on that job and adds a note. 4 **Edit first** opens the job with the change filled in, for you to check and save.
Cancellation (grey label)	5 **Delete cancelled job** removes the matching job and its calendar entry. It asks first. No undo.
Every card	6 **Dismiss** ignores it. Nothing in the log changes. 7 **Open email** opens the original email in Gmail. Use it to double-check.

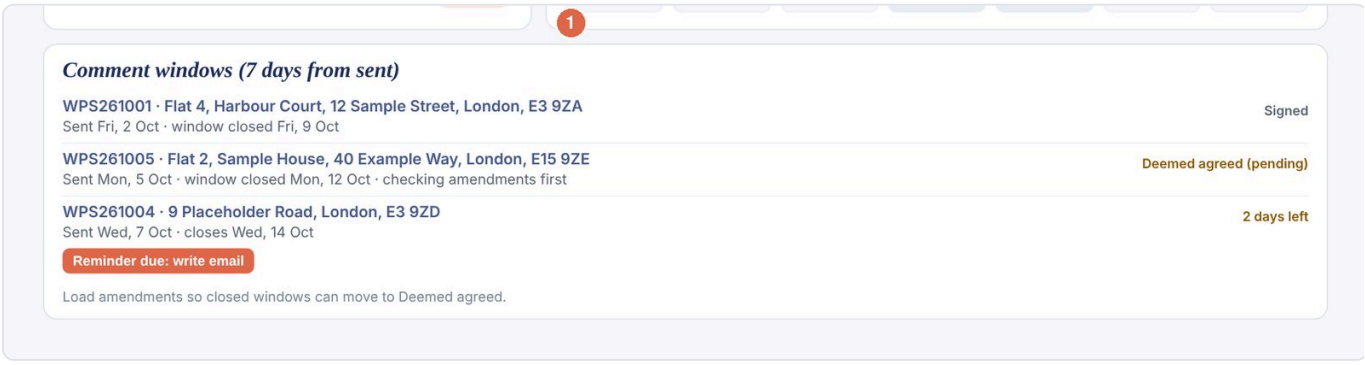

Hide (top right of the tray) folds it away. Anything you haven't handled shows again next time you check.

> **"Couldn't find this job in your log"** on a change or cancellation means Claude couldn't match it to a job. Use **Edit & add** if it should be logged, or Dismiss it.

8. Comment windows, reminders and amendments

This only applies to **inventory and check-in** reports. Tenants have 7 days from when the report is sent to send comments through the comments form. If they don't comment or sign, the report is deemed agreed.

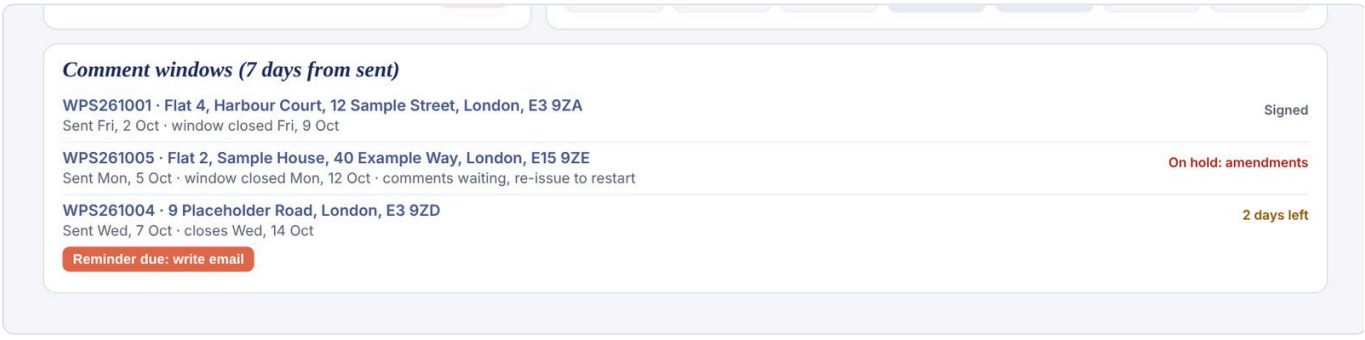

The Comment windows tile

Each sent check-in report with its window: when it was sent, when it closes, days left.

- Each line shows when the report was sent and when the window closes. Amber means 2 days or less left.
- 1 At 2 days left a coral **Reminder due: write email** button appears. It opens a ready-written reminder in Gmail, addressed to the tenant emails on the job. Check it, put the tenant's first name in, and send. The line then says "Reminder sent" with an **undo** link if you clicked by mistake.
- When the automatic reminder emails are switched on (see section 13), it says "Reminder sent automatically" instead, and you don't need to do anything.

When the window closes

After the window: one report on hold because comments are open.

- **No comments open:** the job moves to **Deemed agreed** by itself. This only happens after the amendments have been loaded (below), so a job with comments waiting is never deemed agreed by mistake.

- **Comments still open:** it shows **On hold: amendments**. Deal with the comments, re-send, and click `Re-issued today` on the job (section 6).
- **Not checked yet:** "Deemed agreed (pending)" means the amendments haven't been loaded today. Click the Amendments tile and load them.

The Amendments tile

Click the tile, then `Load amendments`. Google may ask you to sign in. It reads the WPS Amendments Sheet and lists every job with tenant comments still open:

One job with open comments: how many points, how many decided, who sent them.

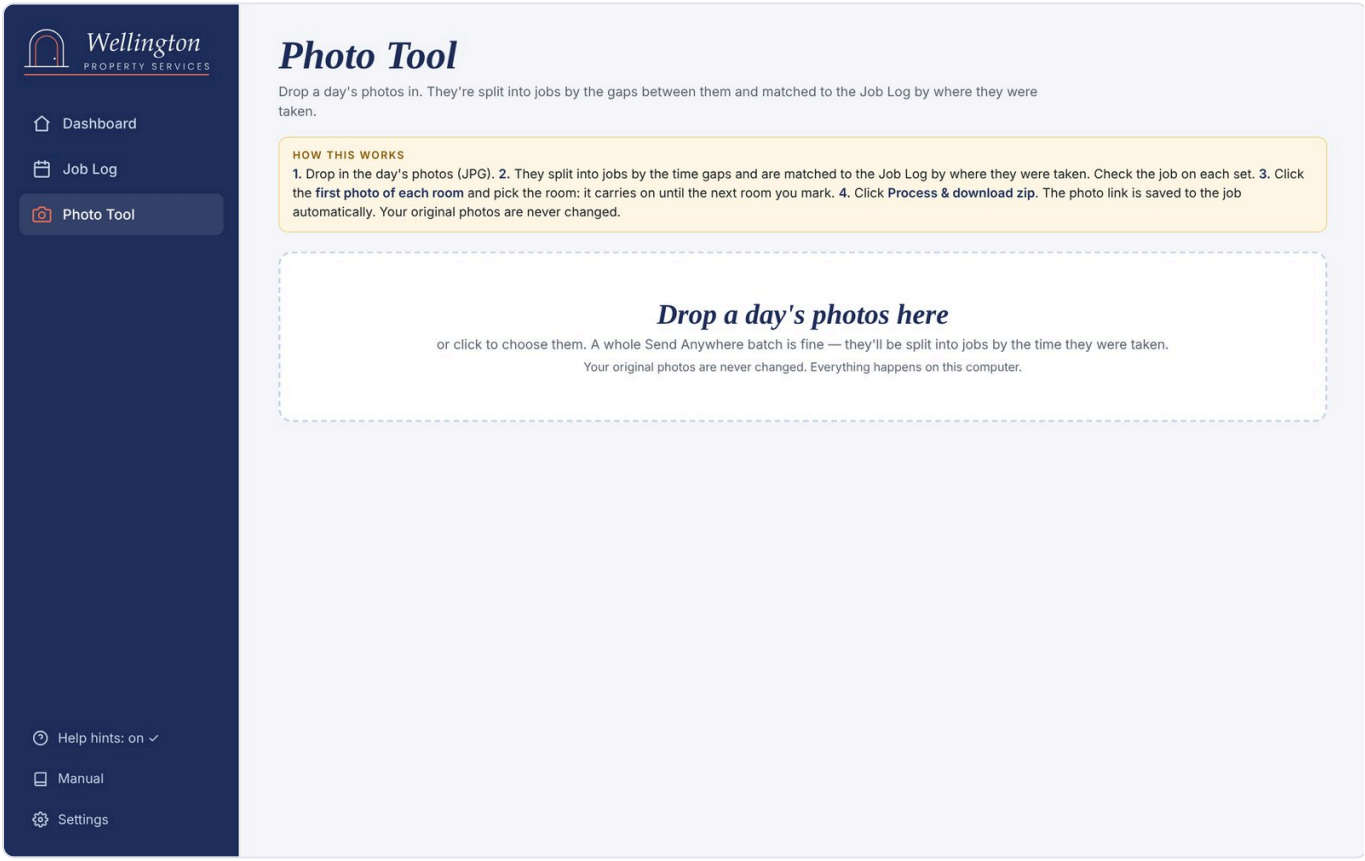

- To work through them, say **"review amendments WPS261005"** (with the job number) to Claude in the WPS project chat on the PC. Claude fills in the review page.
- 1 **Open review page** is where you decide each point: Make the change, Add to Notes or No change.
- **Amendments Sheet** opens the raw list. **Refresh** reads it again.

9. The Photo Tool

Use it on the **PC**, after a day of visits. It does four things for each job: splits the day's photos into jobs, names them by room, adds the watermark, and makes one zip per job. Everything happens on the PC. **Your original photos are never changed.**

> **Before you start:** open the Photo Tool from the sidebar, in the same Chrome you use for the Job Log, so it can see your jobs. On the iPhone, set Settings › Camera › Formats to **Most Compatible** so it shoots JPG. HEIC photos work but lose their "time taken", which the tool relies on.

Step 1: drop the photos in

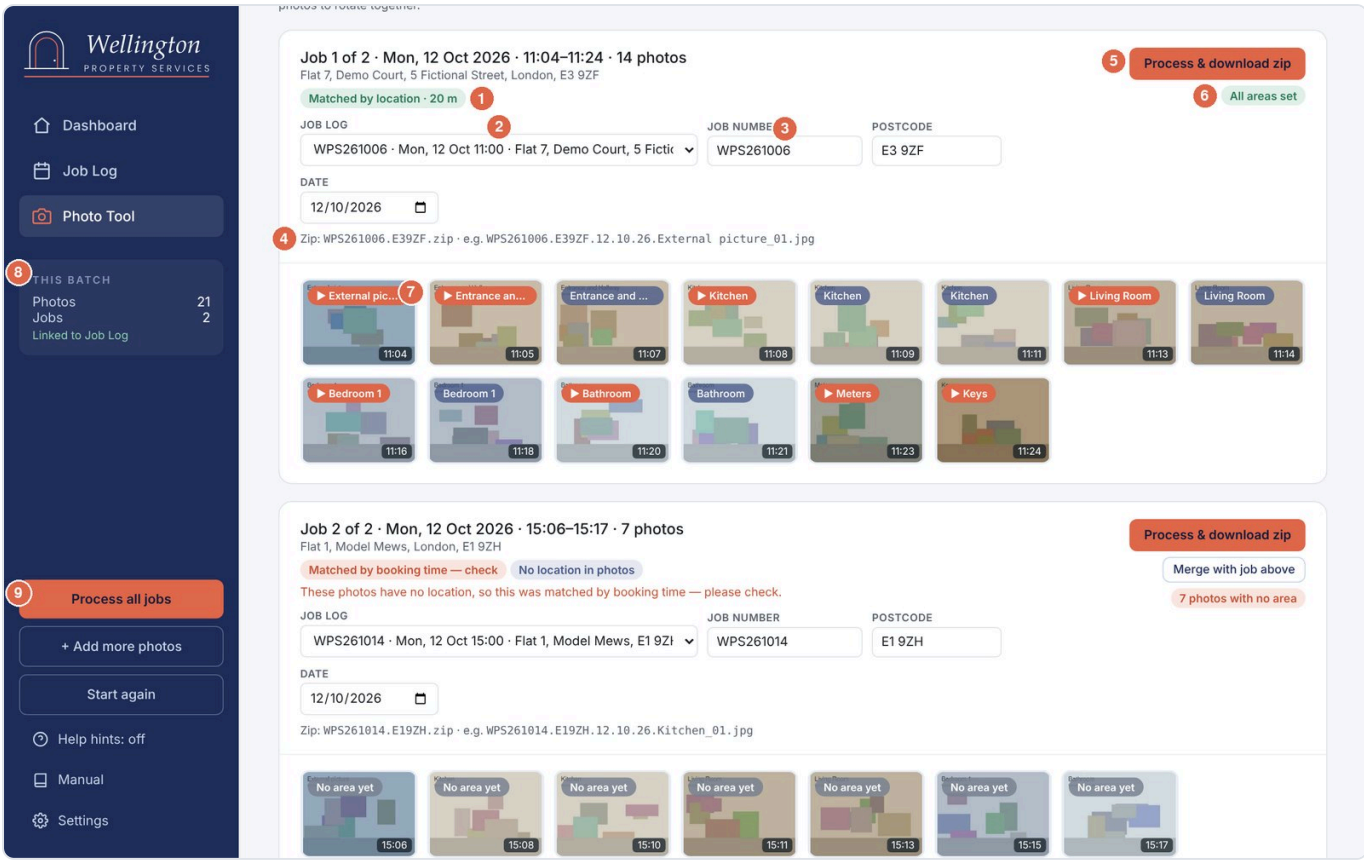

The Photo Tool before any photos are added (Help hints on).

Drag the whole day's photos onto the dashed box, or click it and choose them. A whole Send Anywhere batch is fine.

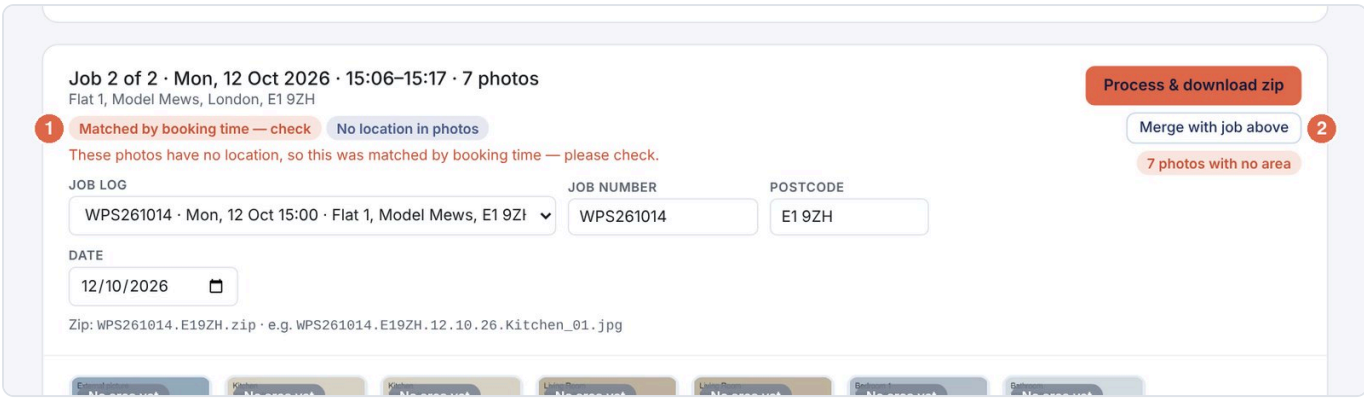

Step 2: check each set

The photos are split into sets wherever there's a gap of 30 minutes or more between shots. Each set is matched to a job by **where the photos were taken**, or by booking time if the photos have no location.

Two sets from one day. The first has its rooms marked.

1	**How it matched.** Green "Matched by location" is reliable. Amber "Matched by booking time — check" or "Location match — check" means look at it. "Not matched — pick the job" means choose one.
2	**Job Log.** The job this set belongs to. Jobs near where the photos were taken are listed first, with the distance. Pick a different one if it's wrong.
3	**Job number and postcode.** Fill in from the job. You can type them by hand. The zip button stays grey until both are there.
4	**Names preview.** What the zip and photos will be called, e.g. WPS261006.E39ZF.zip and WPS261006.E39ZF.12.10.26.Kitchen_01.jpg.
5	**Process & download zip** for this job (step 4).
6	**Areas check.** "All areas set" in green, or how many photos still have no room.
7	**Photos.** ▶ in coral marks the first photo of a room. The grey label on the following photos shows they belong to that room.
8	**This batch.** How many photos and jobs, and that it can see the Job Log.
9	**Process all jobs** makes every zip in one go. Below it, **+ Add more photos** (anything you missed) and **Start again** (clears the tool, originals untouched).

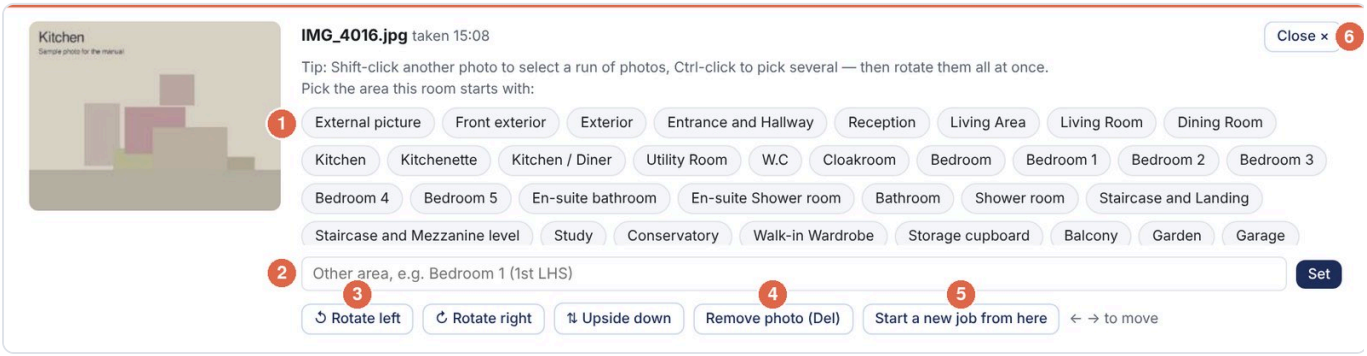

A set with no location in the photos: 1 check the job is right. 2 Merge with job above.

- **One visit split in two** (you stopped for a long time): click **Merge with job above** on the second set.
- **Two visits joined together** (they were close in time): open the first photo of the second visit and click **Start a new job from here**.
- **You went back to the same property later:** pick the same job on both sets. They're put into one zip.

Step 3: mark the rooms

Click the **first photo of each room**. A panel opens at the bottom:

The photo panel.

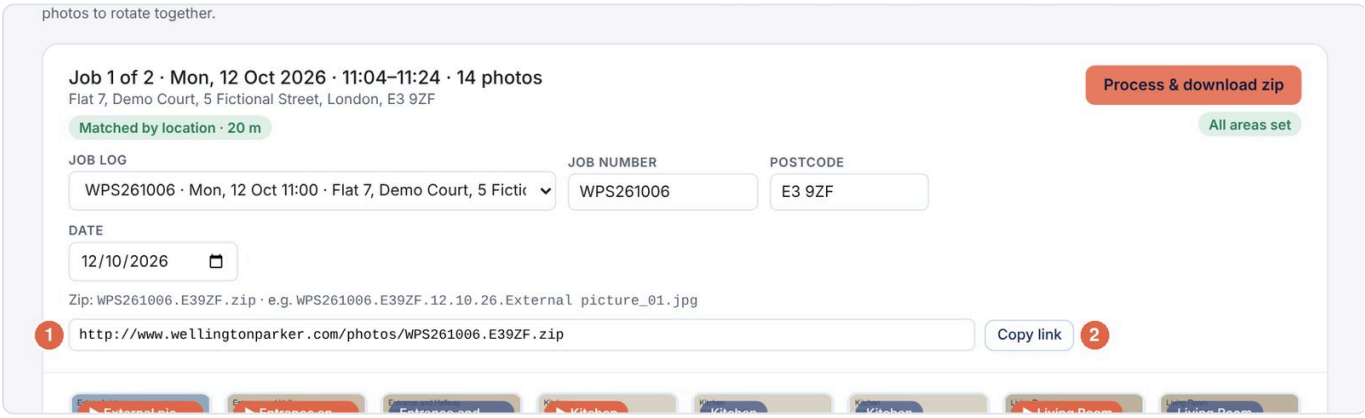

1	**Room buttons.** Click the room. Every photo after it belongs to that room until the next one you mark. The panel then moves to the next photo, so you can carry on.
2	**Other area.** Type a room that isn't in the list (e.g. "Bedroom 1 (1st LHS)") and click **Set** or press Enter. It's added to the list for next time.
3	**Rotate** left, right or upside down.
4	**Remove photo** leaves it out of the zip. It isn't deleted from your PC. Click again to put it back.
5	**Start a new job from here** splits the set at this photo.
6	**Close** (or Esc).

Keyboard shortcuts in the panel: ← → previous/next photo, **R** rotate, **Del** remove, **Esc** close. To rotate several at once, click one photo, then **Shift-click** another to select the run between them (or **Ctrl-click** to pick photos one by one), and use the buttons in the panel.

The **External picture** room is special: as well as going in the zip, a clean copy (no watermark, larger) is saved separately as the report cover photo, e.g. WPS261006.E39ZF.cover.jpg.

Step 4: process and download

Click **Process & download zip** on the set (or **Process all jobs**). A progress bar shows each photo. When it's done:

1 The photo link. 2 Copy link.

- The zip and the cover photo are in your **Downloads** folder.
- The **photo link** is saved to the job in the Job Log by itself, which clears it from the "Photos not done" tile. **Copy link** copies it for the report.
- The tool doesn't upload the zip. Put it on the photos server as you do now, so the link works.

Inside each photo: the date and time it was taken are kept, the location is removed, and a small navy Wellington Property Services tag with the date and time sits in the corner.

Settings

Click **Settings** at the bottom of the sidebar. Settings are saved on that PC.

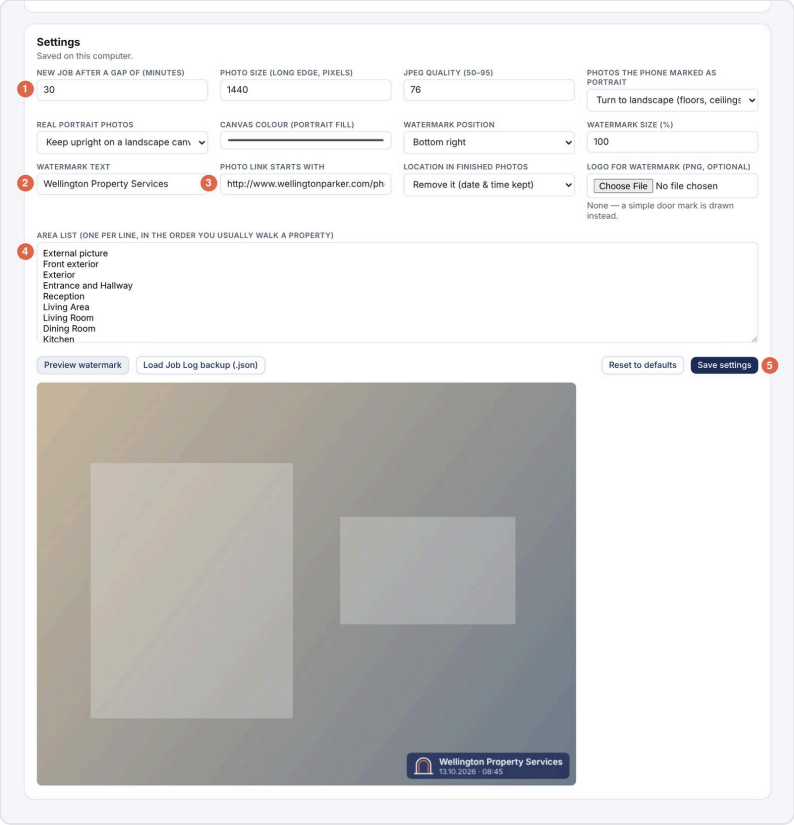

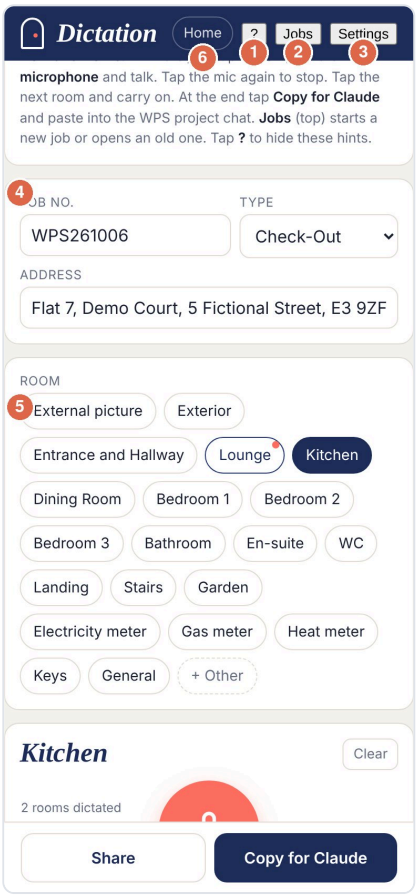

Photo Tool settings.

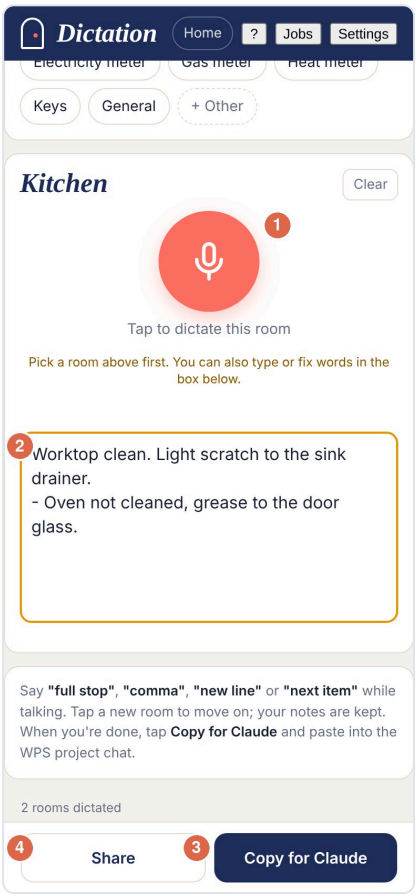

- 1 **New job after a gap of** (minutes). Default 30. Lower it if two nearby visits get joined.
- Photo size, JPEG quality, how portrait photos are handled, canvas colour.
- 2 Watermark position, size and text. Click **Preview watermark** to see it.
- 3 **Photo link starts with.** The web address the link is built from.
- 4 **Area list.** The room buttons, one per line, in the order you usually walk a property.
- 5 **Save settings. Reset to defaults** puts everything back. **Load Job Log backup** is only needed if the tool says it can't see your jobs.

10. Dictation

Use it on the **phone** during a visit. Open it from **Dictation** under LINKS in the sidebar (on the phone, it's under **Menu ☰**). Add it to the home screen so it opens like an app. The notes are kept **on that phone only**, until you copy them out.

The job and the rooms.

Dictating a room.

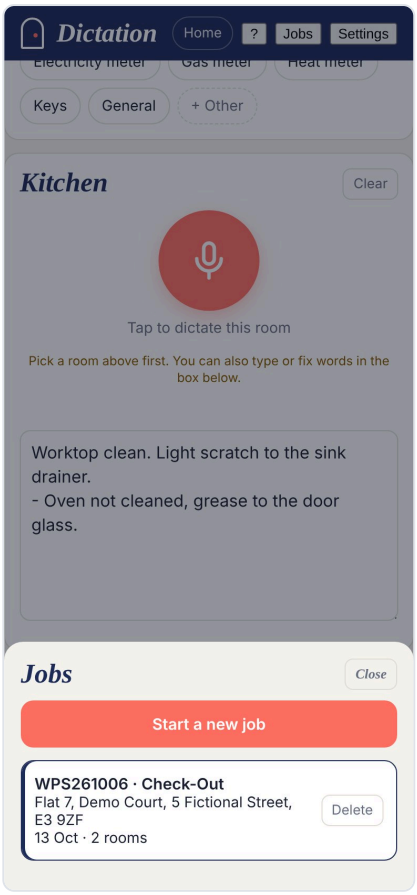

Top bar:

- 6 **Home** goes back to the Dashboard.
- 1 **?** shows or hides the help lines.
- 2 **Jobs**: your saved dictations, and **Start a new job**.
- 3 **Settings**: word fixes, rooms, audio backup.

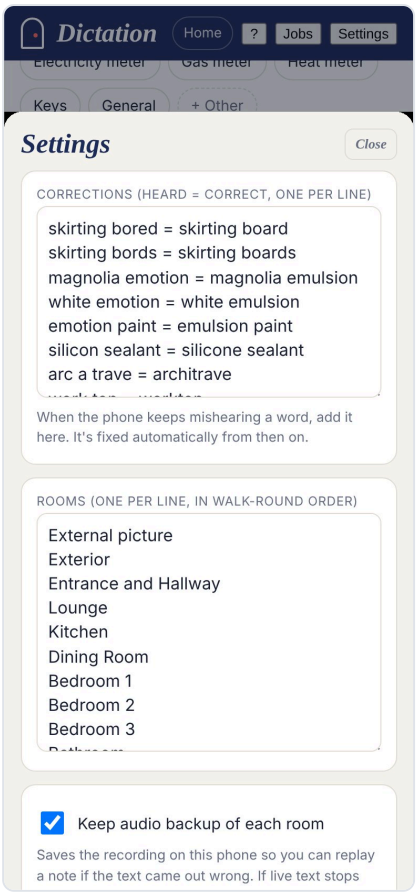

Steps:

1. 4 Type the job number, pick the type, add the address.
2. 5 Tap a **room**. A red dot means it already has notes.
3. 1 (right picture) Tap the **microphone** and talk. Tap again to stop.
4. 2 The words appear in the box. You can type or correct them.
5. Tap the next room and carry on.
6. 3 At the end tap **Copy for Claude** and paste into the WPS project chat. 4 **Share** sends the notes to another app.

While talking you can say "full stop", "comma", "question mark", "new line", "new paragraph" or "next item" (starts a new bullet). **Clear** (next to the room name) empties that room's text.

Jobs: switch between dictations or delete old ones.

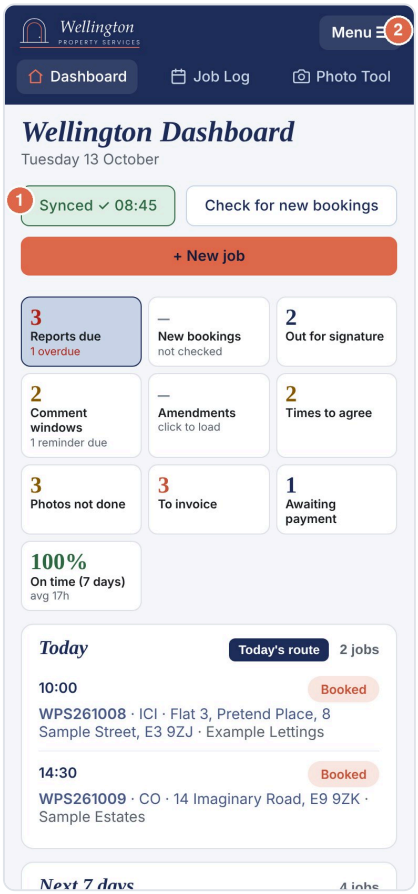

Settings.

- **Corrections:** when the phone keeps mishearing a word, add a line like *skirting bored = skirting board*. It's fixed automatically from then on.
- **Rooms:** the room buttons, one per line, in walk-round order.
- **Keep audio backup:** keeps a recording of each room on the phone, to replay if the text came out wrong. If the live text stops working with this on, switch it off.
- **Export all notes** saves a backup file. Tap **Save settings** when done.

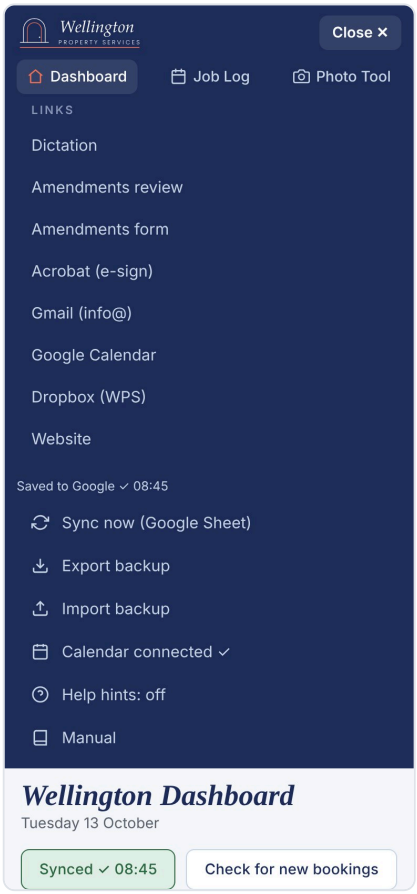

The microphone needs permission the first time. If the phone asks, tap Allow. The live text comes from the phone's own speech recognition, which usually needs a signal.

11. Using it on your phone

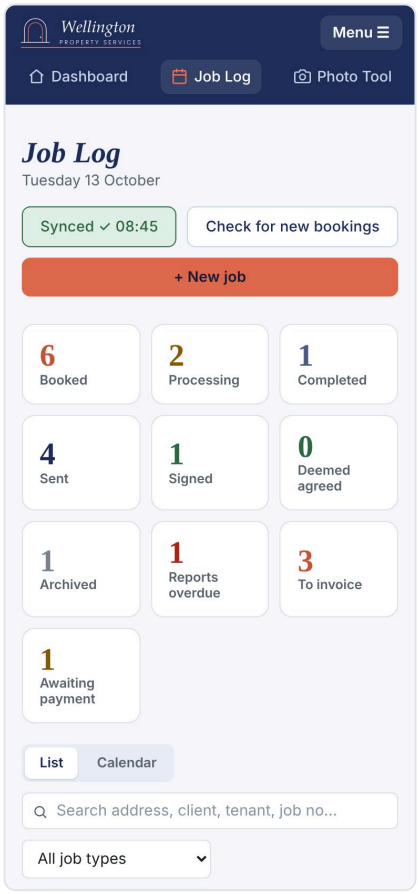

The Dashboard and Job Log work on the phone and tablet. The sidebar folds into a bar at the top, and each job shows as a card.

Dashboard on the phone.

Menu ☰ opened.

Job Log as cards.

First time on a new phone or tablet

1. Open the web address in Chrome (or Safari on the iPhone).
2. Tap **Load my jobs from Google** and sign in as info@wellingtonparker.com. Your jobs appear.

Every time you open it

- 1 Tap **Sync now**. It says **Syncing…** then **Synced ✓** with the time. That brings over anything you changed on the PC.
- After you change something on the phone, tap Sync now again so the PC gets it.
- If it says **Sync again ⚠**, tap it again. The reason shows underneath (often the Google sign-in was closed).
- 2 **Menu ☰** opens the links and tools. **Close ×** folds them away.

The Photo Tool is meant for the PC (big batches of photos and downloads). Dictation is meant for the phone.

12. The sidebar menu

Pages

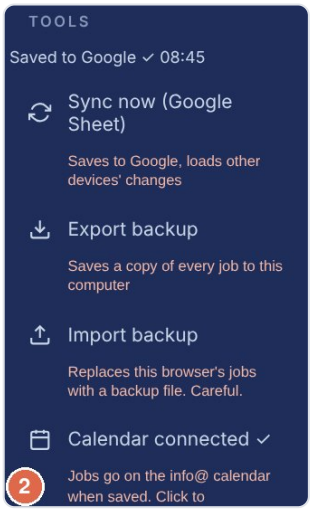

Dashboard	Today's overview.
Job Log	Every job, list or calendar.
Photo Tool	Photos to zips.

LINKS

Shown on the Dashboard. Links to other sites open in a new tab.

Dictation	Voice notes, for the phone.
Amendments review	Your page for deciding tenant comments.
Amendments form	The form tenants fill in (the link that goes in the Acrobat email).
Acrobat (e-sign)	Send check-in reports for signature.
Gmail (info@)	The info@ inbox.
Google Calendar	The info@ calendar.
Dropbox (WPS)	The WELLINGTON PROPERTY SERVICES folder.
Website	wellington-ps.co.uk
Job Log Sheet	The Google Sheet copy. Look, don't edit. (Shows once this device has synced.)

TOOLS

The TOOLS list (Help hints on).

Saved to Google ✓ (status line)	When the last save to Google happened. Coral text means something needs attention. Read it and click Sync now.
Sync now (Google Sheet)	Saves to Google and loads changes made on other devices. If both changed, it asks which copy to keep.
Export backup	Saves every job to a file in Downloads (WPS-Job-Log-backup-date.json). Do it weekly.
Import backup	Replaces this browser's jobs with a backup file. It asks first. Only for emergencies.
Connect Google Calendar / Calendar connected ✓	When connected, every job you save goes on the info@ calendar. Click to disconnect.
1 **Help hints**	Hint text on or off (section 1).
2 **Manual**	This manual.

13. What runs by itself, what you do

Runs by itself

- Inbox check at 7:51, 12:51 and 15:51, Monday to Saturday: lines up bookings and flags new amendments.
- Saving the Job Log to Google (PC, within seconds).
- Job numbers.
- Report due times and overdue warnings.
- The 7-day comment window countdown on check-ins.
- Deemed agreed, once amendments are loaded and none are open.
- Calendar entry when you save a job (if connected).
- Photo link saved to the job by the Photo Tool.
- Four automatic emails from reports@ (amendments in progress, signed, deemed agreed, 7-day reminder to tenants). **These are still in test mode**: they only go to reports@, marked [TEST]. Nothing reaches agents or tenants until test mode is switched off.

You do

- Check the bookings tray and add, change or dismiss.
- Agree times and add them.
- Move the stage pills along after each visit and report.
- Fill in tenant emails and "Copy to" on check-ins.
- Send reports, and check-ins for signature in Acrobat (with the comments form link).
- Send the 7-day reminder from the dashboard button (until the automatic emails go live).
- Load amendments, and ask Claude to "review amendments" for a job.
- Run the Photo Tool and put the zips on the photos server.
- Copy dictation to Claude.
- Invoice in Tide and click the invoice pill.
- Sync now on the phone. Export backup weekly.

14. If something looks wrong

What you see	What to do
A change Claude made isn't showing on the PC.	Press **Ctrl+F5** to load the latest version.
The phone or tablet shows no jobs.	Tap **Load my jobs from Google** and sign in as info@.
Phone doesn't show what you did on the PC.	Tap **Sync now**.
"Changed on another device — click Sync now"	Click Sync now. It brings in the other device's changes. If both were changed it asks which to keep: OK = Google's copy, Cancel = this browser's.
"Google sign-in pop-up was blocked"	Allow pop-ups for the site (icon at the right of Chrome's address bar), then try again.
"Not saved to Google — will retry on next change"	Usually the internet dropped. Click Sync now when you're back online.
Amendments or New bookings tile shows "–".	Normal until you load them. Click the tile, then the button.
"Google refused Gmail access (403)"	Tell Claude. It's a Google set-up issue, not your data.
Lots of reports overdue.	Move the pills of sent reports to Sent or beyond.
Photo Tool: "Can't see your Job Log jobs"	Open it from the sidebar in the same Chrome as the Job Log. You can still type job numbers by hand.
Photo Tool split a visit wrongly.	Merge with job above / Start a new job from here (section 9), or change the gap in Settings.
Photos had "no date taken inside".	They're HEIC or edited copies. Check the split. Set the iPhone to Most Compatible.
Dictation microphone does nothing.	Allow the microphone when asked. Check signal. Try switching off audio backup in Settings.
Deleted a job by mistake.	There's no undo. Re-add it, or ask Claude to help restore it from a backup.

15. Known gaps

Things that aren't finished yet, as of 12 October 2026:

- **Automatic emails are in test mode.** Until switched on, send reminders yourself from the Comment windows tile.
- **Cornell (WPS260921)** was marked Sent before send dates were recorded, so it has no comment window on the dashboard.
- **Photo links** still use wellingtonparker.com. The new photos.wellington-ps.co.uk address isn't working yet.
- **On the phone** you have to tap Sync now each time. It doesn't sync by itself.
- **Extract job details** only reads a clean address line. When the address is buried in a sentence, type it in.
- **The job form doesn't show the photo link.** It's saved and clears the "Photos not done" tile, but you see it in the Photo Tool (Copy link), not on the job.
- **The Photo Tool and Dictation** were checked at phone and tablet size in a test browser, not yet on your own devices.

If this manual and the tools ever disagree, the tools are right. Ask Claude to update the manual.
